

Institutional Development

A Trusted Development Partner

Institutional developments require streamlined communication. We have successfully collaborated with multidisciplinary project teams of Architects, Developers, Contractors, and end-user Clients to complete successful projects.

> Our multi-discipline team is focused on your success, bringing project efficiency, innovative solutions, effective project management, and outstanding communication to the table.

From feasibility studies and due diligence, to conceptual planning through site design, we prepare reports, exhibits, and contract documents specific to your needs. Necessary state, local, and federal site work permits are obtained efficiently to help our clients avoid delays and stay on-schedule.

The process of evaluating the property and bringing a vision to reality is our business. We evaluate property through various concepts and review potential future expansions and utility availability during the earliest stages of the due diligence process, so that you can make confident investment decisions. We focus on maximizing your investment with thorough and quick feasibility studies.

HRGreen®

Building Communities. Improving Lives.

Project Planning and Execution

We work directly with you to gain an understanding of a site before major financial investments are made in a project. Our process starts with a thorough site analysis effort, identifying all of the natural, man-made and political characteristics of a site. We examine the existing site in great detail and develop conceptual plans that respond positively to environmental and physical site conditions.

Our designs incorporate sustainable stormwater management systems. We have helped clients recover high dollar property formerly used for detention by utilizing underground storage chambers for stormwater management.

With professionals across the nation, we connect our resources and streamline our processes in a virtual environment. This allows our teams we have employed more efficient access to files and data, across all geographies providing improved mobility and delivery of projects.
