

HRGreen

The Road to Success

transportation services

HR Green's Highways and Bridges practice is equipped with the latest technology and knowledge to lead any project from design to construction while applying valuable business sense. We partner with clients and residents and take a holistic approach to solving transportation challenges by first understanding the underlying needs to the projects. We then link these project needs to community values, environmental requirements and infrastructure standards to create a lasting solution that meets the necessities of local citizens and businesses.

Alternative Delivery

The transportation industry is changing rapidly. Funding challenges are prompting a new openness to creative ownership and project delivery methods. From program management to public-private partnerships, clients are examining new ways to build roads. At HR Green, we're ready for the "new normal" in transportation. We can be as creative as your commitments demand and your constituency allows.

See HRGreen.com for more information.

- Roadway and structural design
- Construction phase services

Project Solutions: from Concept to Completion

Design (Roadway & Structural)

HR Green's design team develops safe, functional, affordable structures and roadways provide connectivity for today's economy and lifestyles.

Master Planning

Transportation planning must consider the environmental impacts, current operations and future needs of any community. HR Green will balance these elements to establish infrastructure that preserves our client's investments.

NEPA Compliance

HR Green teams with our clients to identify and address environmental concerns, comply with regulatory requirements and apply the latest in technology and thinking solutions to projects. This allows us to avoid project delays, and progress projects through multiple challenges.

Funding Strategy

We understand the unprecedented fiscal challenges to fund transportation infrastructure and will work with our clients to help determine alternative and unique funding strategies to support the goals of the client.

Traffic Operations

Modeling with today's best technology allows the HR Green team to create a traffic operations system that supports transportation and emergency services to make our communities functional and safe.

Public Involvement/CSS Approach

HR Green recognizes each project is unique in its critical issues and works to involve stakeholders with planning, designing and constructing the best solutions to create viable facilities and healthy enterprises.

Construction Phase Services

Our construction team keeps our client's investment in mind on every decision ensuring the project will be completed within specification, of high quality and within budget.
