

CONSTRUCTION

Our construction professionals are experienced with projects for municipal, county, and state clients that include bridges, roads and highways; storm and sanitary sewers; water distribution systems; water treatment facilities; wells, and storage facilities; pumps and lift stations; and wastewater facilities.

At HR Green, construction services are not an afterthought provided by personnel whose true specialty is design. Helping our clients through the critical construction phase is so important, that we established an entire practice area within our company to provide these services. A long-lasting, low maintenance facility is the ultimate goal of any

project and our construction personnel is able to manage clients' investment throughout the project's lifespan. We provide documentation and final records necessary for full reimbursement from funding authorities.

Moreover, we do not wait until plans are finished before we involve

the trained eye of a construction professional. We perform constructability reviews early in the design process so that plans can be developed in a manner that allows efficient construction and lower bid prices, without costly overruns that result from field changes.

HR Green provides tailored construction services to match your specific project needs, safeguarding your investment during the crucial construction phase. We monitor the construction of your project and deliver peace of mind.

▷ CONSTRUCTION SERVICES

▪ Construction Phase Services

HR Green professionals provide on-site field construction observation, quality assessment and problem resolution; utility coordination and assistance; preliminary layout and construction staking; schedule analysis and impact resolution; traffic control and protection monitoring; materials inspection; and record keeping for prompt payment and efficient project closeout.

▪ Resident Engineering

HR Green professionals serve as resident engineers during the critical construction phase of a project. As Resident Engineers, our staff members are responsible for protecting your interests and supervising the planning, coordination, and implementation of projects in the field as well as making sure projects adhere to the necessary standards and guidelines.

▪ Constructability Reviews

Our Constructability Review Team is comprised of people who are apart from the design team and know contractor bid strategies, are aware of common field problems, are fluent with methods of payment, are responsible for contract administration, and have experience with construction scheduling. These reviews can save you time, money, and headaches during the construction of your project.

▪ Contract Administration

HR Green's contract administration processes allow our staff to keep the contractor on schedule, avoid unnecessary contract claims, and minimize overall construction budgets, while advocating for our client. Our inherent understanding of state DOT specifications and our focus on proactive communication with clients and contractors provides effective management of projects.

▪ Stakeholder Coordination

Our extensive experience provides a proven process to engage contractors, the public, municipal officials, utility representatives, materials testing firms, schools, and other agencies. Using dedicated project-specific websites, e-mail blasts, and social media channels, progress updates are disseminated in a timely and efficient manner.

▪ NPDES Erosion Control

We have storm water pollution prevention experts on staff that can help address unique and common conditions on site that may cause problems in the future. Our professionals can also verify that systems are compliant with all EPA and NPDES regulations.
