

HRGreen®

Engineers Make a Difference!

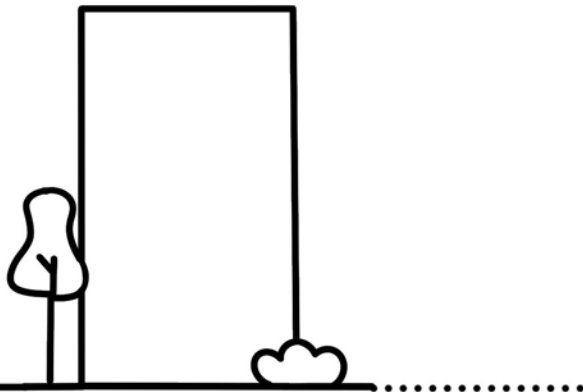

Engineers help clients identify challenges, develop a plan, create designs, refine solutions, and build the design.

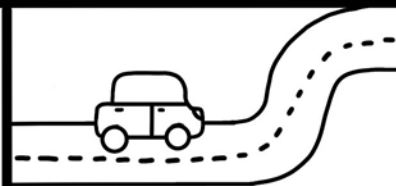

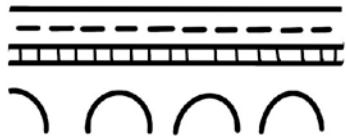

Building Communities. Improving Lives.

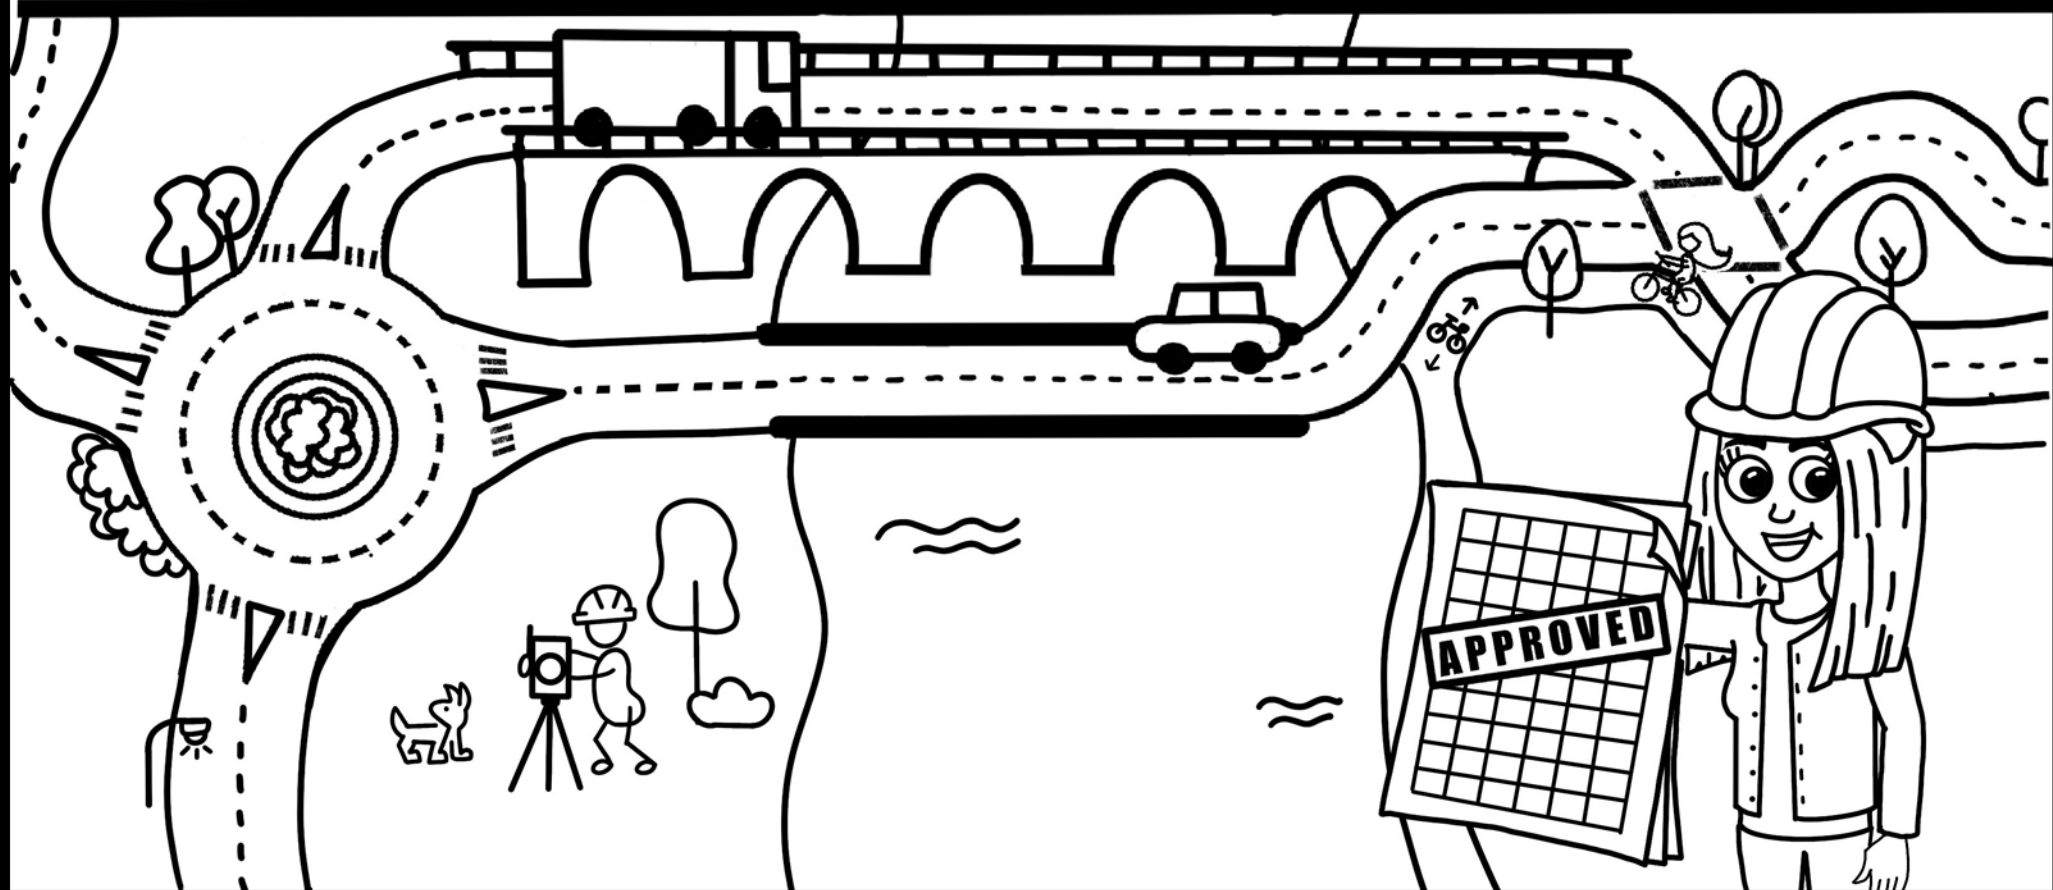

Build your Community
If you can dream it, engineers can build it.

Your community might include:

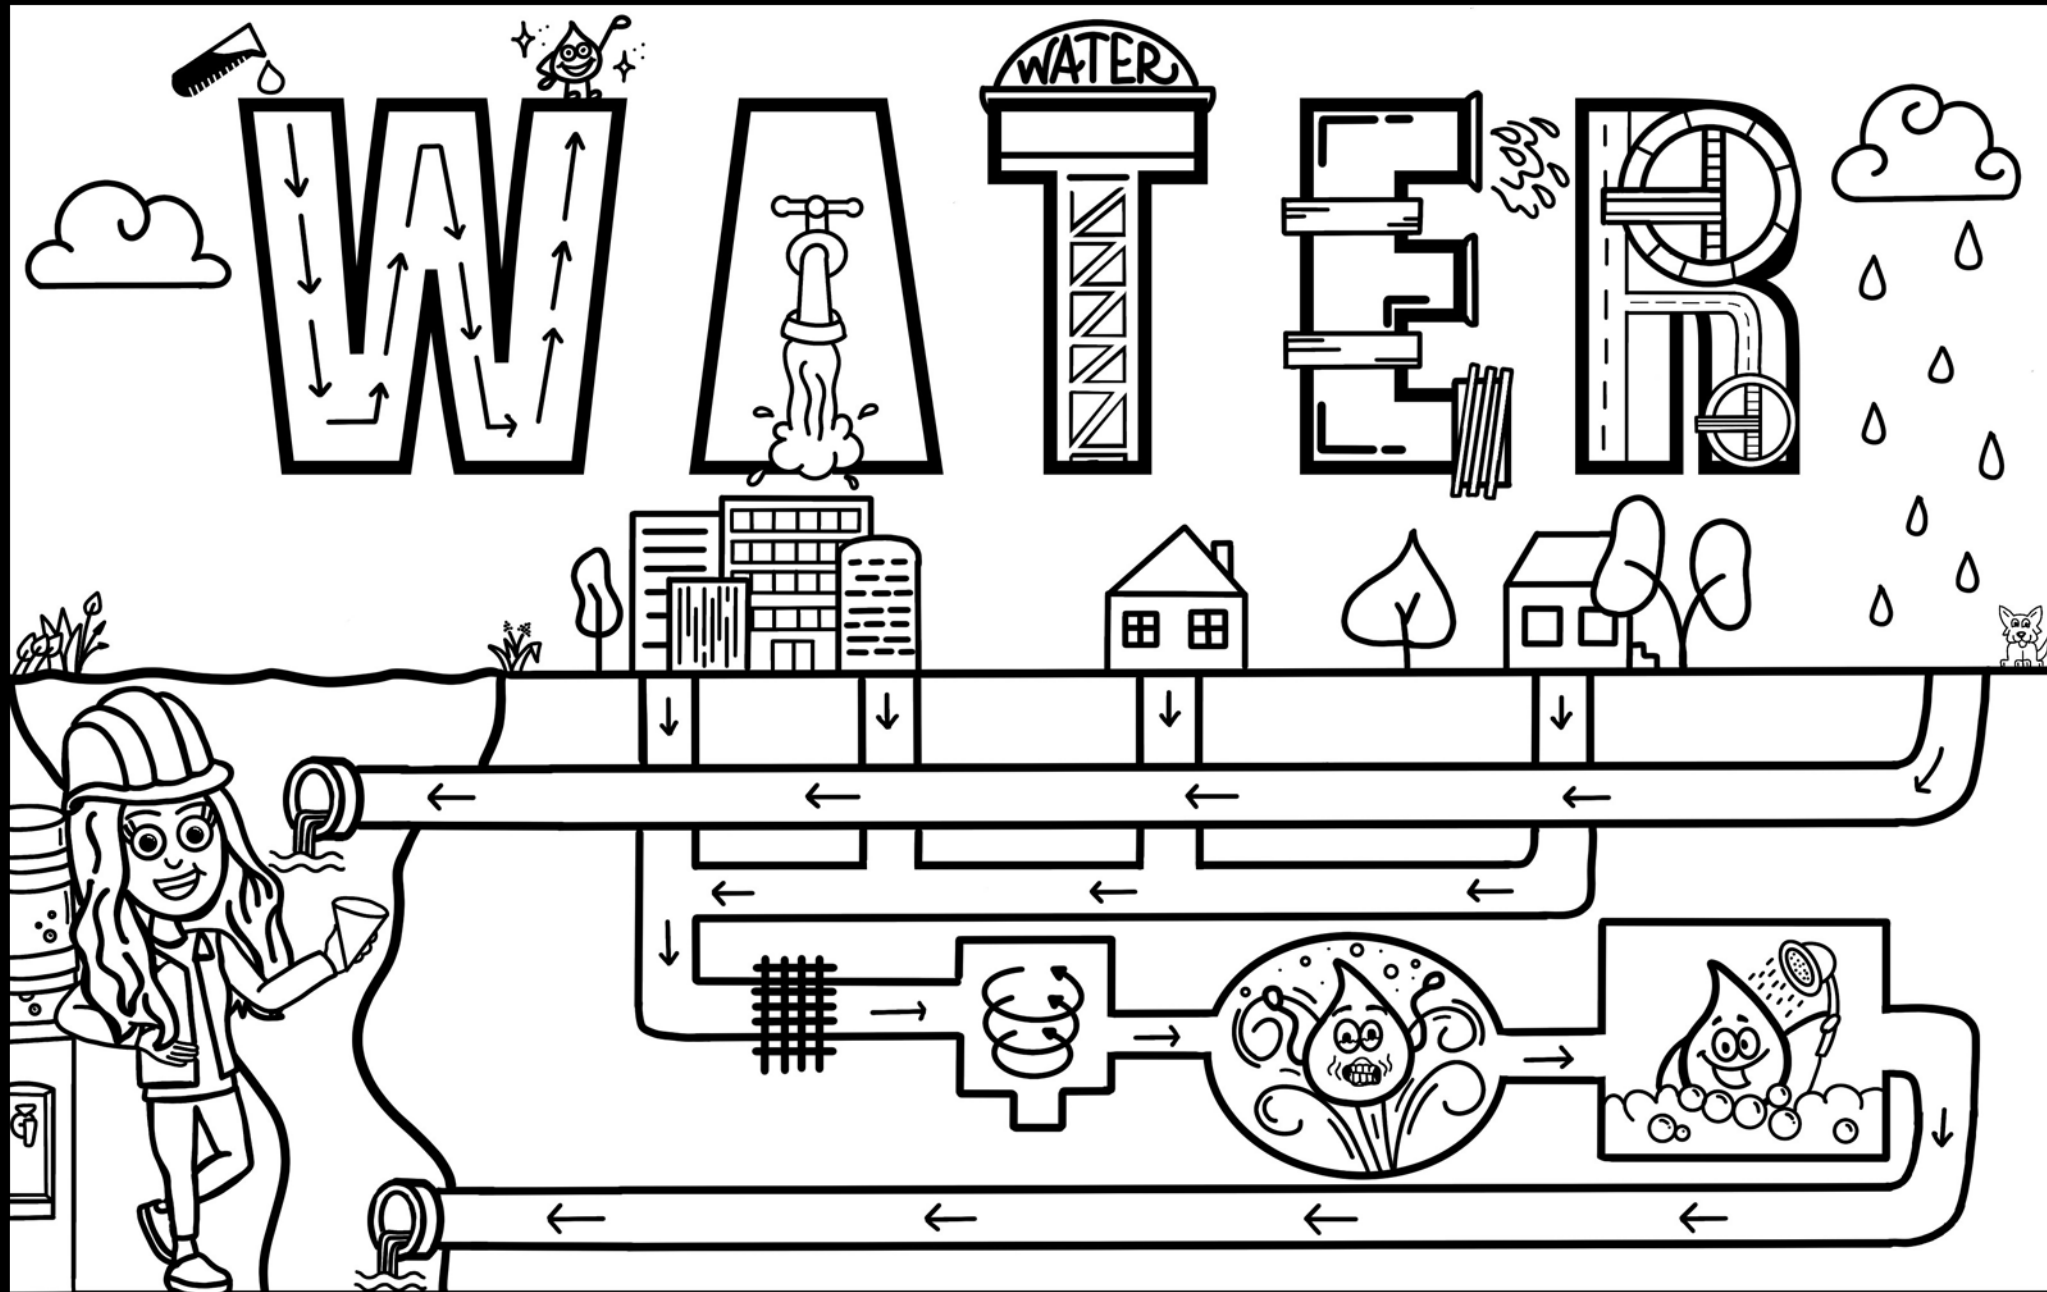

TRANSPORTATION

Helping people move!

Communities depend on roadways, bridges, sidewalks, trails, and signs to help us travel with our neighbors.

Helping communities move water!

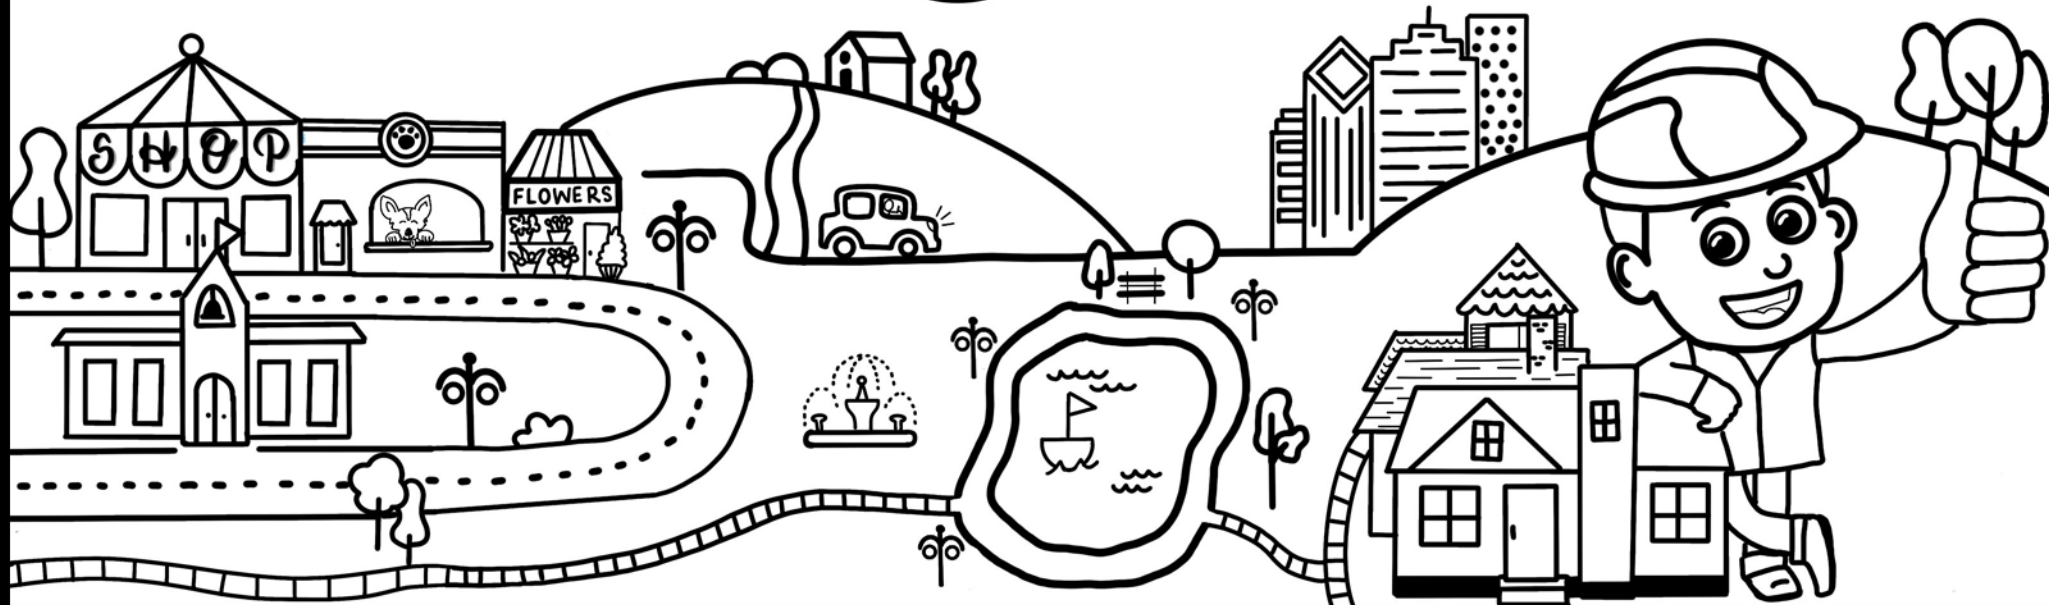

Communities depend on clean water to drink, pipes to move water to our homes, and structures that keep us safe from too much rain.

GOVERNMENTAL SERVICES

Helping communities thrive!

Communities must be safe and efficient to serve the people who live, work, and play in them.

HRGreen®

Creating communities!

Neighborhoods, parks, stores, and schools give communities their unique character.

ENVIRONMENTAL

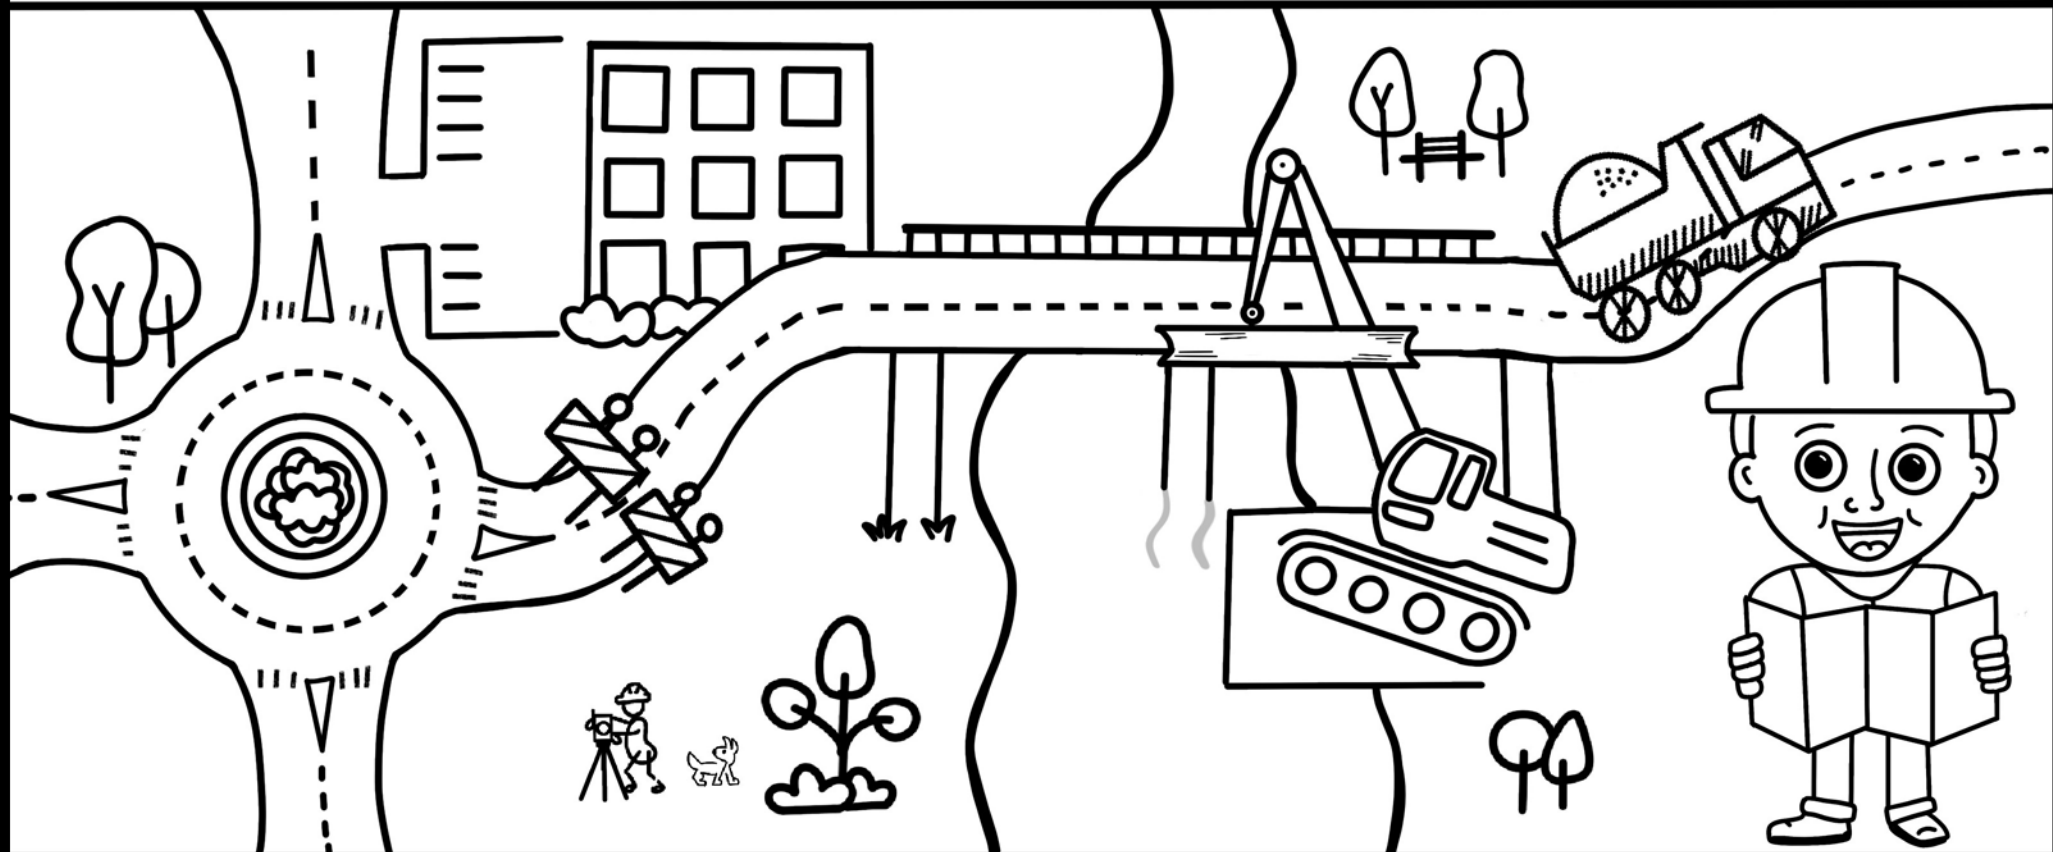

HRGreen®

Protecting and restoring our environment!

Protecting resources like water, air, people, and animals and also their habitats is important for sustainable communities.

CONSTRUCTION

Protecting communities during construction!

Making sure construction is safe for systems like roads, tunnels, bridges, buildings, utilities, and our neighbors keeps communities thriving.
