Environmental

Whether your environmental needs include the remediation of brownfields for redevelopment, environmental compliance for existing infrastructure, or NEPA services for proposed facilities, HR Green can provide the solutions you need.

Projects can be delayed, stalled or even terminated due to environmental regulatory requirements. The Federal, State, and local environmental process is often complex, with agencies interpreting and implementing various regulations. Getting necessary approvals and completing documentation without compromising project needs is often challenging.

When you choose HR Green, you acquire a team of professionals with the proven ability to successfully execute comprehensive environmental requirements for projects. We are proactive in representing clients while also maintaining working relationships with state and federal agencies. In-depth knowledge of the process helps us anticipate your challenges and work with you to efficiently resolve them.

We use a collaborative approach to select multi-disciplinary specialists within our firm to cover all aspects of environmental compliance. As part of our full-service capabilities at HR Green, we collaborate with our Transportation Highway and Structural Design, Water Resources, GIS, and Planning Groups. This interdisciplinary approach allows us to effectively manage environmental concerns, regulatory requirements, and agency coordination to provide clients with a variety of perspectives that are vital when executing a successful project.

When you choose HR Green, you acquire a team of professionals with the proven ability to successfully execute comprehensive environmental efforts for projects.

ENVIRONMENTAL SERVICES

► Environmental Compliance

We have wide-ranging experience in environmental compliance and studies. For example, our environmental team routinely completes phase I/II environmental site assessments, risk assessments, cleanup planning and execution, hazardous materials inventories, air permitting, and leaking underground storage tank investigations to comply with federal, state, and local requirements.

Our environmental and engineering staff collaborate across offices during the planning and design phases of projects to proactively address known or suspected environmental concerns early in the process. This allows our team to provide you with a more accurate opinion of probable costs and helps to avoid unwelcome delays and surprises during construction.

► Brownfields

Brownfields can adversely impact human health, decrease the value of surrounding properties, deter potential investments, and represent a significant safety hazard to the community if left unaddressed.

HR Green's reputation for fund procurement from EPA's Brownfields Program was earned by securing 58 EPA grants totaling more than \$14 million. We are dedicated to helping communities identify and secure funding, formulate and develop planning goals, community vision, and redevelopment strategies.

Our grant writers have successfully assisted our clients with writing the grant applications and securing funding for brownfields and complementary community redevelopment.

We provide holistic management of brownfield redevelopment, from initial assessment, community involvement in developing reuse plans, regulatory coordination, remediation engineering, through final construction. Our team is recognized by the USEPA as experts in brownfield and Superfund redevelopment.

► NEPA Services

Our goal is to identify the resources within the project study area and determine necessary steps to comply with NEPA and other federal and state laws such as the Clean Water Act, National Historic Preservation Act, and the Threatened and Endangered Species Act. We will determine if a wetland delineation, habitat assessment, traffic noise study, or other field studies are needed to achieve environmental clearance.

HR Green works with clients to identify solutions that avoid or reduce impacts to resources and help develop mitigation strategies when needed. The results are comprehensive, objective assessments that achieve environmental clearance so you can build your project.

We have successfully completed a variety of NEPA compliance documents ranging from categorical exclusions, environmental assessments, and environmental impact statements for a variety of federal agencies including FAA, FHWA, HUD, DOE, NGB, and USACE.
