## Compliance at Every Scale

At HR Green, we have a wealth of knowledge in handling environmental concerns of all kinds. We integrate environmental skills with civil and infrastructure expertise to bring maximum benefits to every stage of a project.

With the wide array of environmental studies and assessments our team has conducted nationwide, we have developed key relationships with regulatory agencies in many different states. This allows us to anticipate regulator questions and keep projects on schedule.

**When you choose HR Green, you engage a staff of professionals with the proven ability to successfully execute comprehensive permitting efforts for projects.**

An interdisciplinary approach allows us to effectively manage environmental concerns, regulatory requirements, and agency coordination to provide clients with a variety of perspectives that are vital when executing a successful project.

- Wetlands Delineation, Permitting + Design

► **Due Diligence and Regulation Compliance**

Our due diligence services are available to address your compliance needs. We can complete environmental site assessments on your commercial, industrial, residential or rural property of interest.

HR Green's facility and regulatory compliance services will help you anticipate potential issues. We handle all aspects of an environmental compliance project including evaluating compliance status, developing strategies, air permitting, risk management plans, spill prevention plans, and water/wastewater discharge permitting. We can accurately assess current risks and develop procedures to ensure that your facility is in compliance with current environmental standards.

► **Permitting Services**

Federal, state, and local environmental permitting is often complex, with various agencies interpreting and implementing regulations differently. Getting necessary approvals without compromising the needs of projects is often challenging but achievable when you have the right team working on the issues.

We are proactive in representing projects while also maintaining good working relationships with state and federal agencies. In-depth knowledge of the process helps us anticipate the challenges that you face and we work with you to resolve them.

► **Agency Involvement**

At HR Green, we communicate early and often with federal, state, and local regulatory agencies who have oversight roles to protect various environmental resources. Because of our great working relationship with these agencies, we are able to anticipate and provide the necessary information they need, which reduces project delays. In addition, we coordinate with key stakeholder groups and local authorities to address project concerns early on in the project development process.
