Subject: SD Highway 38 - Existing Traffic and Operations Analysis

Date: April 20, 2023

---

### *Introduction*

The South Dakota Department of Transportation (SDDOT), City of Hartford, Town of Humboldt, City of Sioux Falls, Sioux Falls Metropolitan Planning Organization (MPO), Minnehaha County, and Federal Highway Administration (FHWA) initiated an assessment of approximately 14.2 miles of the SD Highway 38 (SD 38) corridor from the SD Highway 19 intersection in Humboldt, South Dakota to the Marion Road intersection in Sioux Falls, South Dakota. The study segment of SD 38 is predominantly a rural two-lane highway and located in a rapidly developing area and serves as a viable alternate route to Interstate-90. Development pressure is expected to impact the SD 38 corridor with higher traffic volumes, greater demand for multi-modal (bike and pedestrian) uses, and additional access management concerns.

Segments of the SD 38 corridor are expected to need major rehabilitation or reconstruction within the next 10 to 15 years. Primary concerns of this study are to ensure the roadway is reconstructed to meet future traffic volume demands.

The purpose of this technical memorandum is to document the existing conditions traffic assessment in support of the study being completed along SD 38. This technical report will provide an existing conditions assessment of the two-lane highway and at each of the study intersections. **Table 1** depicts the eighteen study intersections reviewed as part of the existing conditions assessment and traffic data review.

TABLE 1: SD 38 STUDY INTERSECTIONS

Main Line	Cross Street(s)
SD Highway 38	SD Highway 19 / 457th Avenue
SD Highway 38	459th Avenue
SD Highway 38	I-90 Speedway Entrance
SD Highway 38	Western Avenue / 463rd Avenue
SD Highway 38	Main Avenue
SD Highway 38	Vandemark Avenue
SD Highway 38	2nd Street
SD Highway 38	West Central High School Entrance
SD Highway 38	Railroad Street / 464th Avenue
SD Highway 38	Mickelson Road/260th Street
SD Highway 38	466th Avenue (North)
SD Highway 38	WB I-90 Exit 390
SD Highway 38	EB I-90 Exit 390
SD Highway 38	466th Avenue (South)
SD Highway 38	County Highway 141 / 468th Avenue
SD Highway 38	County Highway 139 / 469th Avenue
SD Highway 38	La Mesa Drive / 470th Avenue
SD Highway 38	Marion Road

### Existing Conditions

The study area was reviewed in an effort to get an accurate reflection of the traffic operations experienced on a daily basis. This included a review of the local roadways, land uses, and traffic volumes.

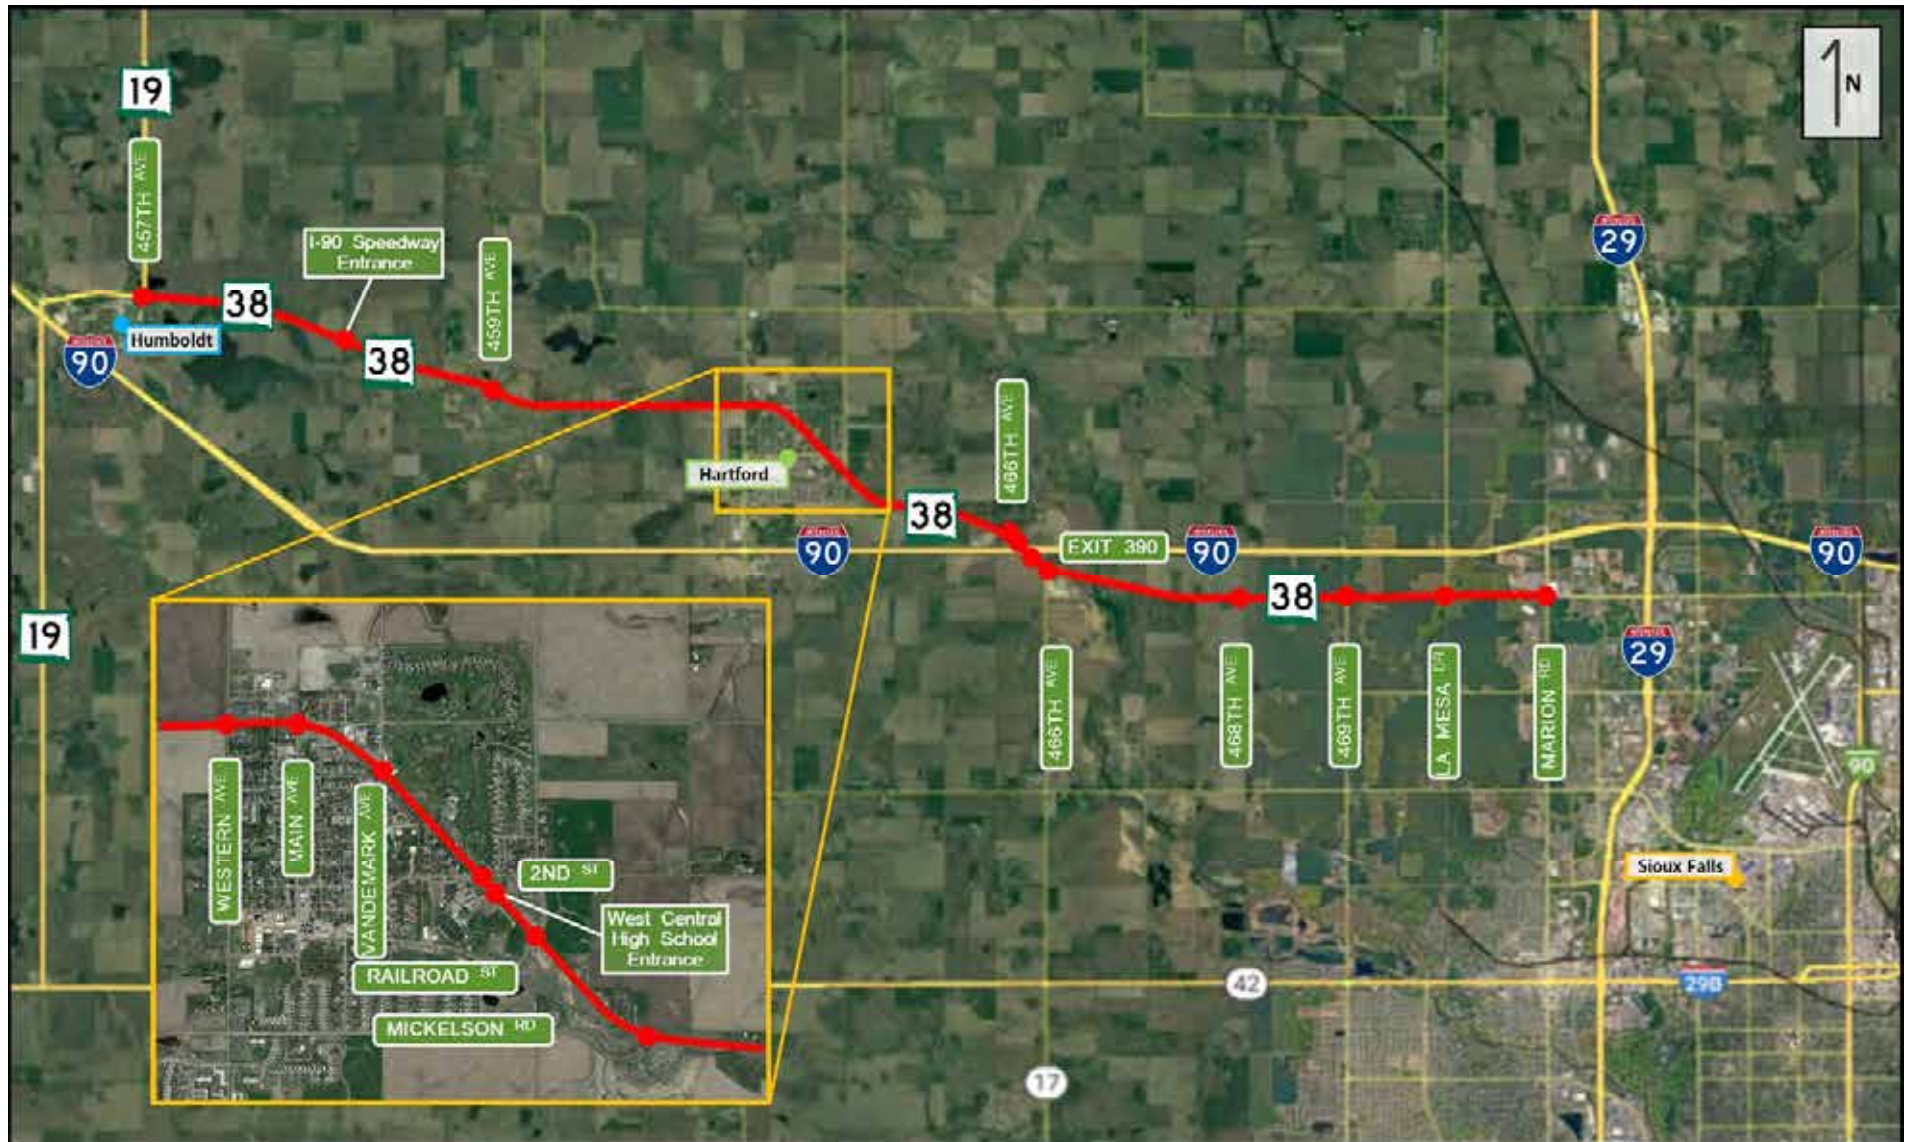

### Existing Roadways

The existing roadway within the study area consists of a 14.2 mile stretch of SD Highway 38 along with 18 intersections with county roads, interstate ramp terminals, and local roads. See **Figure 1** for a depiction of the existing road network within the study area.

SD Highway 38 is a state highway that carries a functional classification of collector between Humboldt to Hartford and a federal functional classification of minor arterial between Hartford to Sioux Falls. It runs east/west through South Dakota between the cities of Mitchell and Sioux Falls. Within the study limits, the SD 38 corridor extends from the SD Highway 19 intersection, east of Humboldt, passes through the City of Hartford and ends at the Marion Road intersection, west of Sioux Falls. The posted speed limit on SD Highway 38 ranges from 65 mph to 35 mph.

The study segment of SD 38 exists primarily as a two-lane rural cross-section with paved shoulders. However, within the City of Hartford the roadway contains an urban cross section with curb and gutter, and street lighting between the intersection of SD 38 & 463rd Avenue and SD 38 & Vandemark Avenue. The SD 38 & I-90 Exit 390 interchange is a folded diamond interchange with stop-controlled ramp terminal intersections.

FIGURE 1: LOCATION FEATURES

There are a total of eighteen study intersections within the study limits including seventeen stop-controlled intersection and one traffic signal-controlled intersection. The pedestrian accommodations within the study area include marked crosswalks at five intersections within the City of Hartford including the study intersections of SD 38 & Vandemark Avenue, SD 38 & 2<sup>nd</sup> Street, SD 38 & West High School Entrance, and SD 38 & Railroad Street. Additionally, there are marked pedestrian crosswalks and pedestrian signal heads with pushbuttons at the intersection of SD 38 & Marion Road. Aerial views of pedestrian crosswalks can be seen in **Appendix A**.

### Existing Land Use

The study area consists of predominantly agricultural land along the SD Highway 38 corridor with a varied mix of residential, commercial, and industrial land uses within the Town of Humboldt, the City of Hartford, and the City of Sioux Falls. **Figure 2** illustrates the current Minnehaha County land uses within the study area.

The Town of Humboldt depicts land use adjacent to the SD 38 study corridor, near the intersection with SD 19, as commercial in the southwest quadrant and single family residential elsewhere, with agricultural land use along SD 38 to the east.

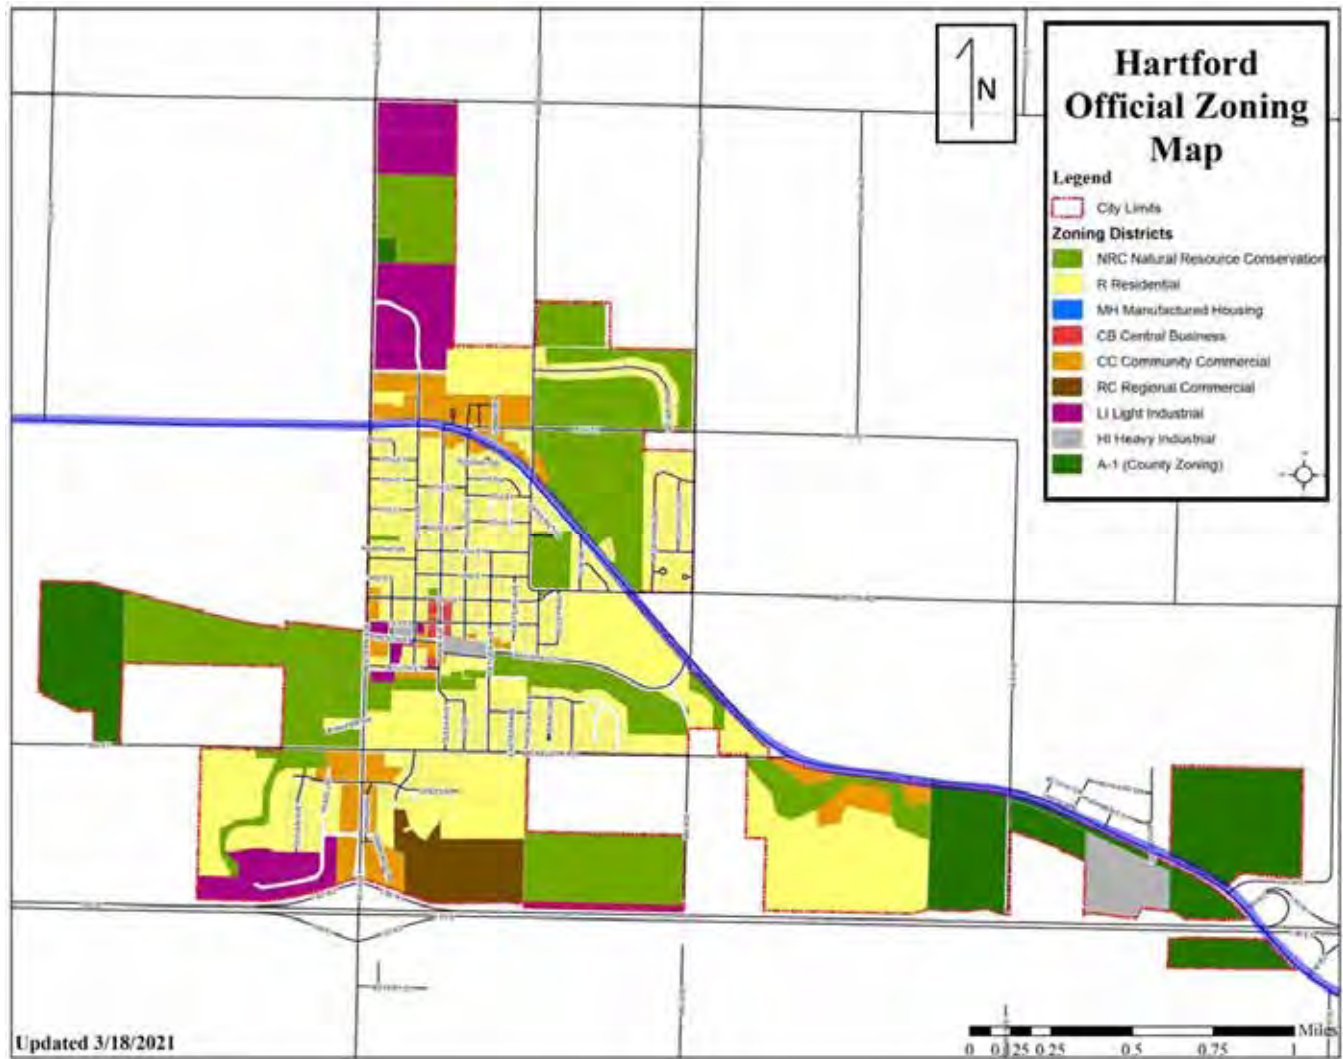

There are a number of commercial and industrial businesses clustered near the I-90 Exit 390 interchange and there is conservation land and rural residential designated land use along SD 38 southeast of the interchange.

FIGURE 2: EXISTING MINNEHAHA COUNTY LAND USE (ENVISION 2035)

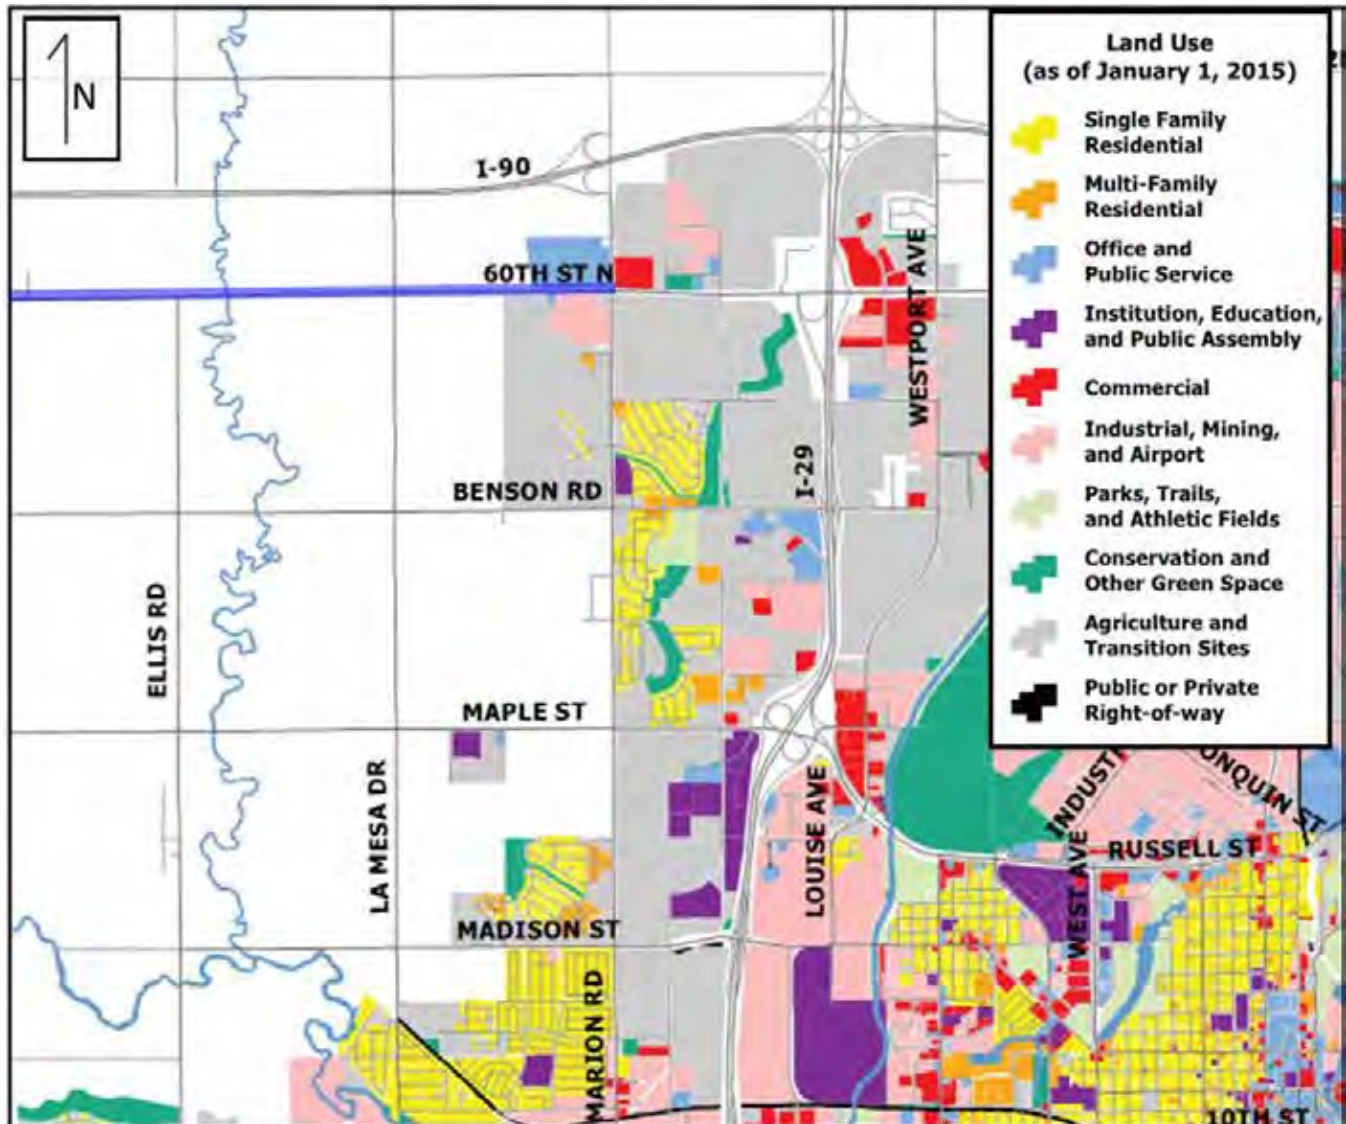

Through the City of Hartford, land uses along the SD 38 corridor include residential, commercial, natural resource conservation, and heavy industrial land uses. **Figure 3** depicts the current City of Hartford land use adjacent to the SD 38 study corridor.

FIGURE 3: EXISTING CITY OF HARTFORD LAND USE (CITY ZONING MAP)

The City of Sioux Falls municipal limits extend through the intersection of SD 38 & Marion Road. Land use adjacent to that intersection include office and public service, commercial, industrial land use, and agricultural. **Figure 4** depicts the current City of Sioux Falls land use adjacent to the study corridor.

FIGURE 4: EXISTING CITY OF SIOUX FALLS LAND USE (SHAPE SIOUX FALLS 2040)

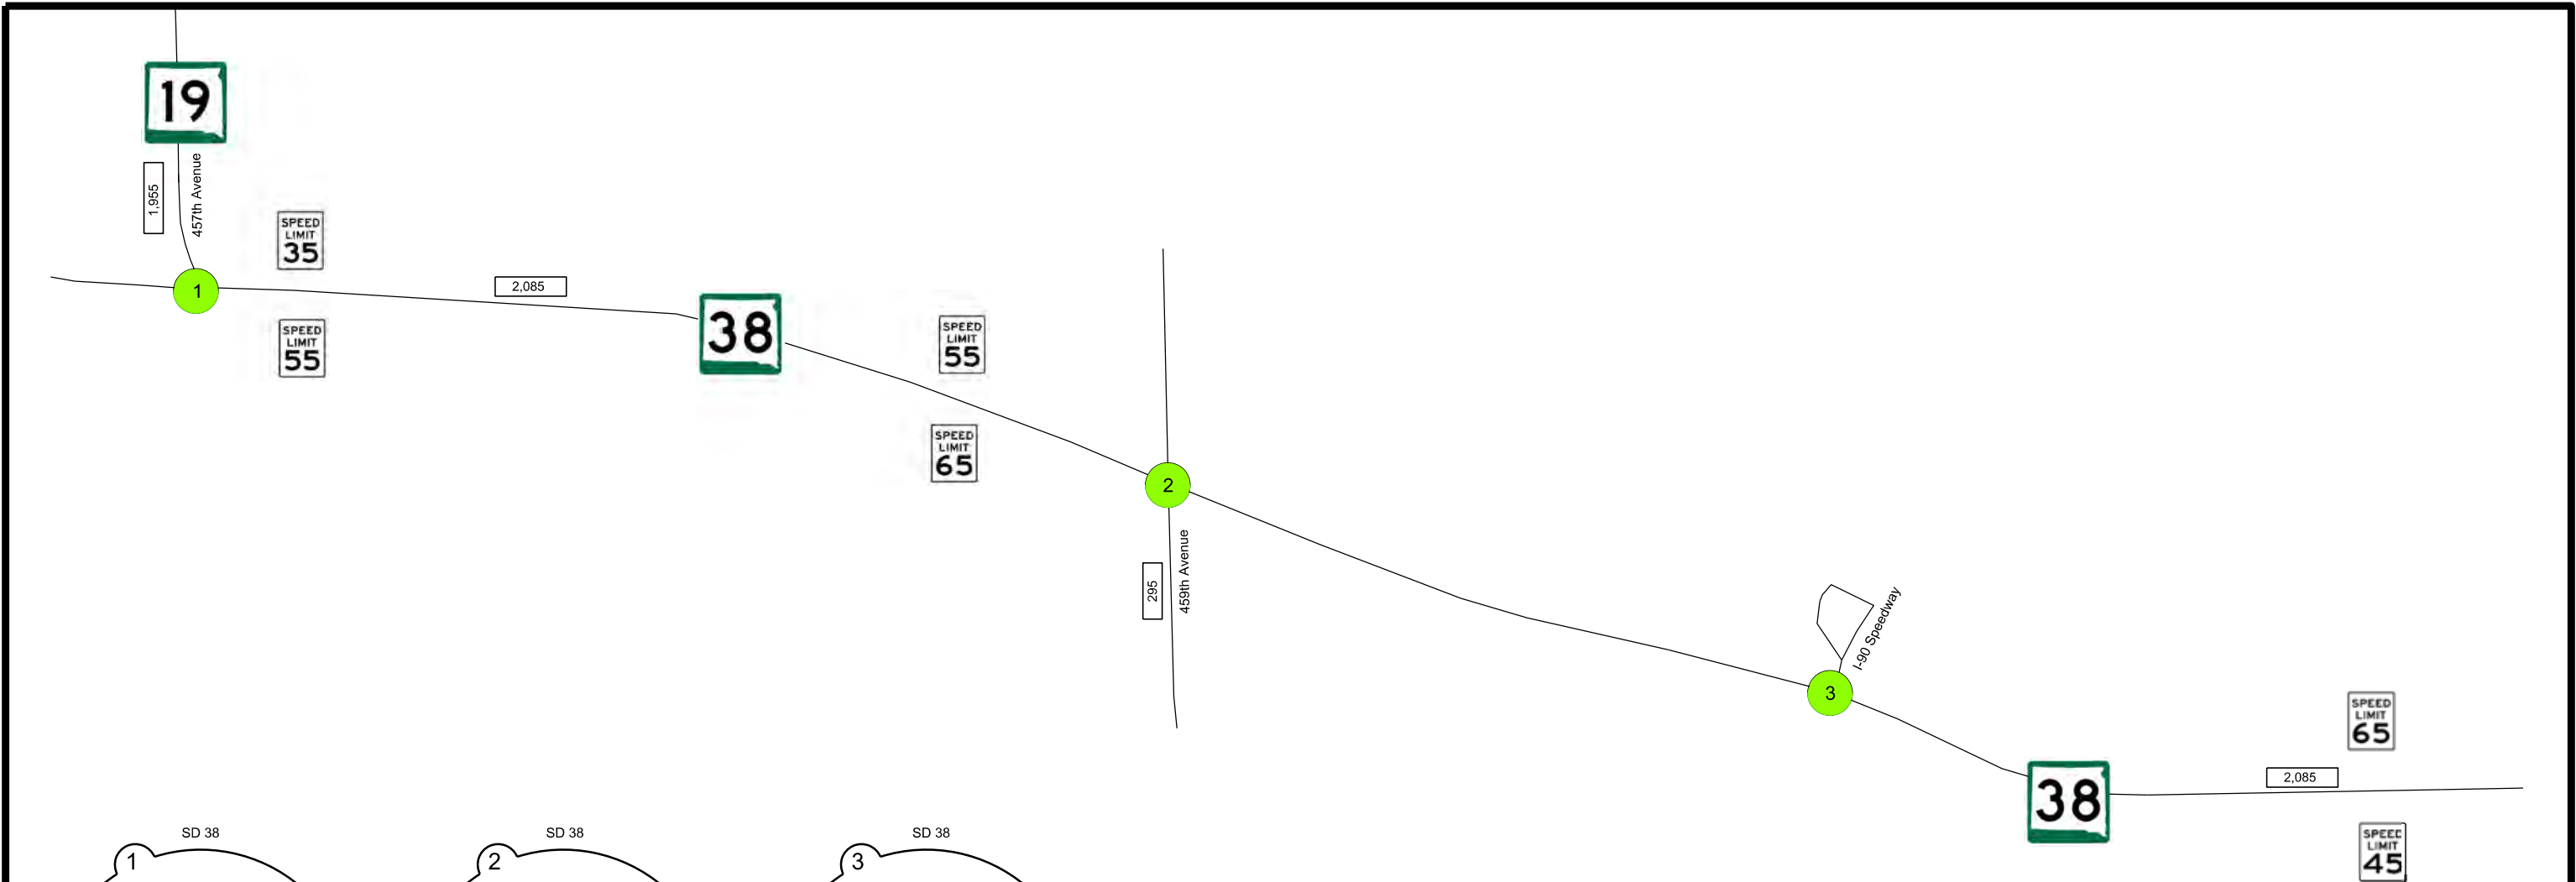

### Existing Traffic Data

Traffic volume data was collected at 18 study intersections along the SD 38 corridor on November 2, 2022, for a 12-hour period (7:00AM to 7:00PM). The count data included turning movements by approach in 15-minute intervals with composition of passenger vehicles and trucks. The intersection of SD Highway 38 & the I-90 Speedway Entrance has been scheduled for additional data collection in spring 2023 to account for event traffic at the raceway.

Review of the traffic volume data revealed distinct AM and PM peak hour periods at each intersection. The peak hour periods at each intersection were then comparatively judged to determine the peaking period of the corridor. It was determined that the AM peak hour occurred between 7:15-8:15 AM and the PM peak hour period occurred between 4:45-5:45 PM. See **Figure 5** for the AM and PM peak hour turning movements at each intersection.

Hourly distribution of traffic at intersections along the SD 38 corridor were examined to determine the characteristics exhibited at each intersection approach leg throughout a typical day. The peaking characteristics of the study corridor are also evident in the hourly traffic distribution data with a distinctive AM and PM peak hour. The hourly distribution at each intersection approach leg can be seen in **Appendix A**.

## Existing Traffic Operations

Intersection level of service (LOS) is primarily a function of peak hour turning movement volumes, intersection lane configuration, and traffic control. For intersection analysis, the Highway Capacity Manual (HCM) defines LOS in terms of the average control delay at the intersection in seconds per vehicle. Two-lane highway LOS is primarily a function of the roadway configuration, vehicle speeds, and availability of passing opportunities. For two-lane highway analysis, the HCM defines LOS in terms of the following density or the number of vehicles in a follower state per mile per lane. The results of a HCM analysis are typically presented in the form of a letter grade (A-F) that provides a qualitative estimate of the operational efficiency or effectiveness of the corridor. Much like an academic report card, LOS A represents the best range of operating conditions (i.e., motorists experiencing little delay or congestion) and LOS F represents the worst (i.e., extreme delay or severe congestion).

**Table 2** defines the control delay range corresponding to each LOS for unsignalized and signalized intersection locations. At intersections, LOS E is considered to be at capacity and typically represents a scenario in which significant queuing is present or traffic signal cycle failure is evident. For unsignalized intersections, the intersection LOS is given by the worst approach LOS. For instance, an intersection with LOS D on one approach and LOS B on the rest would result in LOS D for the intersection.

TABLE 2: LEVEL OF SERVICE FOR CONTROL DELAY (INTERSECTIONS)

Level Of Service	Unsignalized	Traffic Signal
	Control Delay (sec/veh)	Control Delay (sec/veh)
A	≤ 10	≤ 10
B	> 10 and ≤ 15	> 10 and ≤ 20
C	> 15 and ≤ 25	> 20 and ≤ 35
D	> 25 and ≤ 35	> 35 and ≤ 55
E	> 35 and ≤ 50	> 55 and ≤ 80
F	> 50	> 80

Following SDDOT guidance, LOS C is the desired minimum traffic operational goal for intersections in rural environments while LOS D is an acceptable operational goal for intersections in dense urban environments. The intersections within the study area have a desired traffic operational goal of LOS C.

**Table 3** defines the follower density range corresponding to each LOS for two-lane highway segments. On two-lane highways, LOS E is considered to be at capacity. For two-lane highway segments, a LOS B would represent a scenario where some platooning is present with the potential passing demand and passing opportunities balanced while a LOS D would represent a scenario where significant platooning is present and passing demand far exceeds passing opportunities.

TABLE 3: LEVEL OF SERVICE FOR FOLLOWER DENSITY (TWO-LANE HIGHWAYS)

Level Of Service	Speed ≥ 50 mph	Speed < 50 mph
	Follower Density (followers/mi/ln)	Follower Density (followers/mi/ln)
A	≤ 2.0	≤ 2.5
B	> 2.0 – 4.0	> 2.5 – 5.0
C	> 4.0 – 8.0	> 5.0 – 10.0
D	> 8.0 – 12.0	> 10.0 – 15.0
E	> 12.0	> 15.0
F	Demand exceeds capacity	

Following SDDOT guidance, LOS C is the desired traffic operational goal for highways in rural environments (functional classification of collector) and LOS D is considered the minimal acceptable operations for highways in

urban environments (functional classification of minor arterial). The SD 38 highway segments within the study area are categorized as rural with federal functional classification of collector between Humboldt to Hartford and categorized as urban with federal functional classification of minor arterial between Hartford to Sioux Falls. The two-lane highway segments within the study area have a desired traffic operational goal of LOS C.

Traffic operations analysis for the study area intersections included capacity evaluation using the Highway Capacity Manual (HCM) 7<sup>th</sup> Edition techniques thru use of the Highway Capacity Software (HCS) 2022. Traffic operations analysis used existing intersection geometry with 2022 traffic volumes and posted travel speeds. Output reports from the HCS2022 software are available in **Appendix B**.

The results of the intersection capacity analysis can be seen in **Figure 5** and **Table 4** below.

TABLE 4: HCM TRAFFIC INTERSECTION OPERATIONS – EXISTING 2022

ID #	SD Hwy 38 Cross Street(s)	AM PEAK HOUR		PM PEAK HOUR	
		Delay	LOS	Delay	LOS
1	SD Highway 19 / 457th Avenue	9.9	A	10.2	B
2	459 <sup>th</sup> Avenue	10.0	A	11.0	B
3	I-90 Speedway Entrance	0.0	A	0.0	A
4	Western Avenue / 463rd Avenue	11.9	B	14.0	B
5	Main Avenue	11.2	B	12.9	B
6	Vandemark Avenue	11.2	B	11.1	B
7	2nd Street	14.0	B	14.2	B
8	West Central High School Entrance	10.9	B	10.7	B
9	Railroad Street / 464th Avenue	14.2	B	14.1	B
10	Mickelson Road/260th Street	11.5	B	11.3	B
11	466th Avenue (North)	14.9	B	14.5	B
12	WB I-90 Exit 390	10.2	B	12.3	B
13	EB I-90 Exit 390	14.1	B	14.8	B
14	466th Avenue (South)	11.0	B	11.1	B
15	County Highway 141 / 468th Avenue	12.6	B	12.6	B
16	County Highway 139 / 469th Avenue	12.5	B	14.5	B
17	La Mesa Drive / 470th Avenue	14.8	B	16.4	C
18	Marion Road	16.0	B	18.7	B

Under the existing conditions, the traffic operations analysis showed acceptable operations at all intersections within the study area, with intersections achieving LOS B or greater during both the AM and PM peak hours. The exception was the SD 38 & La Mesa Drive/470<sup>th</sup> Avenue intersection which produced a LOS C during the PM peak hour.

Traffic operations analysis for the study area SD Highway 38 corridor included capacity evaluation using the Highway Capacity Manual (HCM) 7<sup>th</sup> Edition techniques through use of the Highway Capacity Software (HCS) 2022. The highway was segmented according to the two-lane highway methodology presented in chapter 15 of HCM7, with segment breaks reflecting the passing zones. The two-lane highway traffic operations analysis used existing highway geometry with 2022 traffic volumes and posted travel speeds. Output reports from the HCS2022 software are available in **Appendix B**.

The segmentation for analysis can be seen in **Figure 6**. The results of the two-lane highway capacity analysis can be seen in **Table 5** and **Table 6**.

WB 34	Passing Zone	0.2	A	0.5	A
WB 35	Passing Constrained	0.3	A	0.6	A

Under the existing conditions, the traffic operations analysis showed acceptable operations at all of the highway segments within the study area, with the majority of segments achieving LOS B or greater during both the AM and PM peak hours. The exception was an approximately 1,500-foot segment of westbound SD 38 (WB 20 and 21), located near the intersection of Mickelson Road/260th Street and downstream of the 50-mph speed transition which resulted in a LOS C during the PM peak hour.

In general, the existing condition traffic operations demonstrated acceptable performance measures throughout all intersections and highway segments within the study area. The desired LOS was realized for all intersections and highway segments during the AM and PM peak hours.

### Safety Review

The SDDOT provided historical crash data for the study area. HR Green reviewed crash data for all study intersections within the study limits to determine current crash trends and/or concerns. Crash data was also reviewed for highway segments to determine current crash trends and/or concerns, the SD 38 study corridor was divided into three segments for this review, SD 38 West of Hartford, SD 38 through Hartford and SD 38 East of Hartford. Intersection related crashes are considered as occurring within the study intersection area of influence and segment crashes are those that occurred outside of those intersection limits but within the SD 38 corridor study area. Crashes were analyzed for the five-year period between 2018-2022.

The intersection crash rate per Million Entering Vehicle (MEV) was calculated for the study intersections based on the 2022 traffic volume data provided in the "Existing Traffic Data" section of this report. The SDDOT provided the predicted crash frequency for study intersections and weighted crash rate for study segments. Some intersections were not provided a predicted crash rate due to lack of available minor road ADT. The crash data from SDDOT for the study area can be seen in **Appendix C**.

The following is a summary of the crash history for each study intersection and segment.

#### Study Intersections

##### SD Highway 38 & SD Highway 19 / 457<sup>th</sup> Avenue

- 3 Total Crashes
  - 3 = Property Damage Only
    - 1 = Improper Turn
    - 1 = Ice on the Road
    - 1 = Animal in the Roadway
- Manner of Collision
  - 2 = Non-collision
  - 1 = Angle
- Crash Rate = 0.51 crashes per million entering vehicles
- Average Crash Frequency = 0.60 crashes per year
- Predicted Crashes = 0.54 crashes per year

#### Crash Experience Legend

- Crash Severity
- Major Cause

#### Year of Crash

2022	2
2021	1
2020	0
2019	0
2018	0

The crash data showed 3 reported intersection-related crashes at the SD Highway 38 & SD Highway 19 intersection, which were classified as a Property Damage Only incidents. There was no primary cause of crash incidents with each cause of crash incident unique. The causes of the crashes were listed as an Improper Turn, Ice on the Road, and an Animal in the Roadway.

### SD Highway 38 & 459<sup>th</sup> Avenue

- 2 Total Crashes
  - 2 = Property Damage Only
    - 1 = Failed to Yield to Vehicle
    - 1 = Animal in Roadway
- Manner of Collision
  - 1 = Non-collision
  - 1 = Angle
- Crash Rate = 0.33 crashes per million entering vehicles
- Average Crash Frequency = 0.40 crashes per year
- Predicted Crashes = 0.68 crashes per year

<u>Year of Crash</u>	
2022	0
2021	0
2020	0
2019	2
2018	0

The crash data showed 2 reported intersection-related crashes at the SD Highway 38 & 459<sup>th</sup> Ave intersection, which were classified as Property Damage Only incidents. There was no primary cause of crash incidents with each cause of crash incident unique. The causes of the crashes were listed as Failed to Yield to Vehicle and an Animal in Roadway.

### SD Highway 38 & I-90 Speedway

There were no reported crashes within the influence area of this intersection from January 2018 through December 2022. However, a fatal crash had occurred on SD 38 near this intersection and has been listed under the summary for study corridor segments.

### SD Highway 38 & Western Avenue / 463<sup>rd</sup> Avenue

- 7 Total Crashes
  - 1 = Suspected Minor Injury
    - 1 = Failure to Yield to Vehicle
  - 1 = Possible Injury
    - 1 = Failure to Yield to Vehicle
  - 5 = Property Damage Only
    - 2 = Failure to Yield to Vehicle
    - 1 = Followed too Closely
    - 1 = Improper Backing
    - 1 = Road Surface Conditions (Snow/Ice)
- Manner of Collision
  - 2 = Rear-end
  - 4 = Angle
  - 1 = Sideswipe same direction
- Crash Rate = 0.81 crashes per million entering vehicles
- Average Crash Frequency = 1.40 crashes per year
- Predicted Crashes = 1.80 crashes per year

<u>Year of Crash</u>	
2022	2
2021	1
2020	1
2019	0
2018	3

The crash data showed 7 reported intersection-related crashes at the SD Highway 38 & Western Ave / 463<sup>rd</sup> Ave intersection, with 1 classified as Suspected Minor Injury, 1 classified as Possible Injury, and 5 classified as Property Damage Only. The primary causes of the crash incidents was Failure to Yield to Vehicle (57%), Followed too Closely (14%), Improper Backing (14%), and Road Surface Conditions (14%).

### SD Highway 38 & Main Avenue

- 1 Total Crash
  - 1 = Property Damage Only
    - 1 = Failed to Yield to Vehicle
- Manner of Collision
  - 1 = Angle
- Crash Rate = 0.12 crashes per million entering vehicles
- Average Crash Frequency = 0.20 crashes per year
- Predicted Crashes = Not Available

#### Year of Crash

2022	0
2021	1
2020	0
2019	0
2018	0

The crash data showed 1 reported intersection-related crashes at the SD Highway 38 & Main Avenue intersection, which was classified as a Property Damage Only incident. The cause of the crash incident was listed as Failure to Yield to Vehicle.

### SD Highway 38 & Vandemark Avenue

There were no reported crashes at this intersection from January 2018 through December 2022.

### SD Highway 38 & 2<sup>nd</sup> Street

- 2 Total Crashes
  - 2 = Property Damage Only
    - 1 = Failed to Yield to Vehicle
    - 1 = Followed too Closely
- Manner of Collision
  - 1 = Rear-end
  - 1 = Angle
- Crash Rate = 0.23 crashes per million entering vehicles
- Average Crash Frequency = 0.40 crashes per year
- Predicted Crashes = Not Available

#### Year of Crash

2022	0
2021	1
2020	1
2019	0
2018	0

The crash data showed 2 reported intersection-related crashes at the SD Highway 38 & 2<sup>nd</sup> St intersection, which were classified as a Property Damage Only incidents. There was no primary cause of crash incidents with each cause of crash incident unique. The causes of the crashes were listed as Failed to Yield to Vehicle and Followed too Closely.

- Predicted Crashes = 2.62 crashes per years

The crash data showed 3 reported intersection-related crashes at the SD Highway 38 & La Mesa intersection, with 2 classified as Property Damage Only incidents, and 1 Fatal incident. There was no primary cause of crash incidents with each cause of crash incident unique. The causes of the crashes were listed as Disregarded Traffic Signs, Improper Backing, and Improper Turn.

The fatal crash incident occurred on December 26, 2020, at approximately 7:30 AM, when a southbound vehicle failed to stop at the stop sign and was struck by an eastbound vehicle. The pavement conditions were reported as dry and adverse weather was not listed as a contributing factor. This crash resulted in a single occupant fatality and single occupant injury.

### SD Highway 38 & Marion Road

- 14 Total Crashes
  - 3 = Suspected Minor Injury
    - 1 = Drinking
    - 1 = Failure to Yield to Vehicle
    - 1 = Disregarded Traffic Signs or Signal
  - 4 = Possible Injury

  - 2 = Sideswipe, Same direction
  - 2 = Sideswipe, opposite direction
- Statewide Average Crash Rate = 1.73 crashes per 100 million vehicle miles traveled
- Weighted Crash Rate = 1.86 crashes per 100 million vehicle miles traveled

The crash data showed 50 reported corridor-related crashes along SD Highway 38 with 43 classified as Property Damage Only incidents, 3 Possible Injury incidents, 1 Suspected Injury incident, 1 Suspected Serious Injury incident, and 2 Fatal incidents. The primary cause of the corridor crashes was determined to be Animal in the Roadway which contributed to 60% of crashes. Following Too Closely and Failure to Yield to a Vehicle were listed as the two most frequent driver contributed circumstances.

A fatal crash incident occurred near mile marker 353, on August 29, 2020, at approximately 6:45 PM, when an eastbound vehicle stopped in the travel lane to complete a left turn and was rear-ended by an eastbound motorcyclist. The pavement conditions were reported as dry and adverse weather was not listed as a contributing factor. This crash resulted in a single occupant fatality.

A fatal crash incident occurred near mile marker 355, on December 17, 2022, at approximately 6:35 PM, when a westbound vehicle struck a snowmobile and occupant who was in the roadway. The pavement conditions were reported as snow covered which may have been a contributing factor. This crash resulted in a single occupant fatality.

  - 3 = Sideswipe, same direction
  - 2 = Sideswipe, opposite direction
- Statewide Average Crash Rate = 1.73 crashes per 100 million vehicle miles traveled
- Weighted Crash Rate = 0.21 to 1.97 crashes per 100 million vehicle miles traveled

The crash data showed 57 reported corridor-related crashes along SD Highway 38 with 44 classified as Property Damage Only incidents, 4 Possible Injury incidents, 4 Suspected Injury incident, 4 Suspected Serious Injury incident, and 1 Fatal incident. The primary cause of crashes was determined to be Animal in the Roadway which contributed to 47% of crashes. Following Too Closely and Drinking were listed as the two most frequent driver contributed circumstances.

The fatal crash incident occurred on February 17, 2021, at approximately 7:50 AM, when an eastbound vehicle crossed into the opposing lane and was struck by a westbound vehicle. The pavement conditions were reported as snow covered which may have been a contributing factor. This crash resulted in a single occupant fatality.

### Crash Summary

Overall, there was a total of 171 crashes that occurred within the SD 38 study area. Of these incidents, there were 4 Fatal incidents (2%), 37 Injury incidents (22%), and 130 Property Damage Only incidents (76%). The majority of crashes were classified as Non-Collision incidents (57%), followed by Rear-End (20%) and Angle incidents (15%). The SD 38 study segments contained 123 (72%) crash incidents and the study intersections contained 48 (28%) crash incidents. The crash summary by manner of collision can be seen in **Table 7** and **Table 8** for the intersection related crashes and segment crashes, respectively. The crash summary by injury severity can be seen in **Table 9** and **Table 10** for the intersection related crashes and segment crashes, respectively.

The intersection with the highest rate of crash frequency was the SD Highway 38 & Marion Road intersection with 14 (30%) of the total intersection crash instances. The segment of SD 38 east of Hartford had the highest frequency of corridor crashes with 57 (46%) of the total corridor segment crash instances.

The main driver contributing circumstances that resulted in fatal and injury crash severity incidents within the study area included Drinking (20%), Failure to yield to vehicle (17%), Disregard of traffic signs or signals (13%), or some form of roadway/lane departure (20%).

There were 2 fatal crash instances that had occurred west of Hartford and 2 fatal crash instances that had occurred east of Hartford during the study period. Each fatal crash had its own unique circumstances that contributed to the event. However, intersection control and roadway geometry modifications may reduce the potential for future crash occurrences.

The crash summary by manner of collision can be seen in **Table 7** and **Table 8** for the study intersection related crashes and segment crashes, respectively. It should be noted that several minor intersections not previously identified for study focus were included in the crash analysis of segments.

TABLE 7: SD 38 INTERSECTION MANNER OF CRASH

SD Highway 38 Intersection	Total Crashes	Non collision	Rear-end	Head-on	Angle	Sideswipe, same direction	Sideswipe, opposite direction

Marion Road	14	0	0	3	4	7	2.80	1.56

NOTE: RED INDICATES A FATALITY OR CRASH RATE ABOVE EXPECTATIONS

TABLE 10: SD 38 SEGMENT CRASH SEVERITY

SD Highway 38 Segment	Total Crashes	Fatal Incidents	Serious Injury Incidents	Minor Injury Incidents	Possible/Unknown Incidents	PDO Incidents	Weighted Crash Rate	Statewide Average Crash Rate
Humboldt to Hartford	50	2	1	1	3	43	1.86	1.73
Within Hartford	16	0	0	0	3	13	0.33-1.88	1.73
Hartford to Sioux Falls	57	1	4	4	4	44	0.21-1.97	1.73

NOTE: RED INDICATES A FATALITY OR CRASH RATE ABOVE EXPECTATIONS

The majority of intersections had lower observed crash frequency than the predicted crash frequency. However, the SD 38 & SD 19 and the SD 38 & Marion Road intersections had an average five-year crash frequency that was above the predicted crash frequency. According to data provided by SDDOT, the SD 38 highway segments as a whole had a weighted crash rate of 3.45 which exceeded the statewide average of 1.73 for rural minor arterials for the period ending in 2020. SDDOT weighted crash rates can be seen in **Appendix C**.

The SDDOT has officially adopted the safety targets presented in the South Dakota Highway Safety Plan and identified safety targets for number of fatalities, rate of fatal incidents, number of serious injuries, and rate of serious

injury incidents. The 2023 targets for safety performance measures established by SDDOT have been endorsed by the Sioux Falls Area MPO. The MPO has resolved to plan and program projects that contribute to the accomplishments of these safety performance goals. The safety performance goals are presented in **Table 11** along with the values calculated within the SD 38 study area.

TABLE 11: ESTABLISHED SAFETY PERFORMANCE GOALS

South Dakota DOT / Sioux Falls MPO Safety Performance Goals	Target Goal	SD38 Corridor Value
<b>Number of Fatalities</b>	<b>122.7</b>	<b>4.0</b>
<b>Rate of Fatalities per HMVMT</b>	<b>1.20</b>	<b>4.1</b>
<b>Number of Serious Injuries</b>	<b>635.9</b>	<b>6.0</b>
<b>Rate of Serious Injuries per HMVMT</b>	<b>6.22</b>	<b>8.1</b>
<b>Number of Non-Motorized Fatalities and Serious Injuries</b>	<b>40.0</b>	<b>0.0</b>

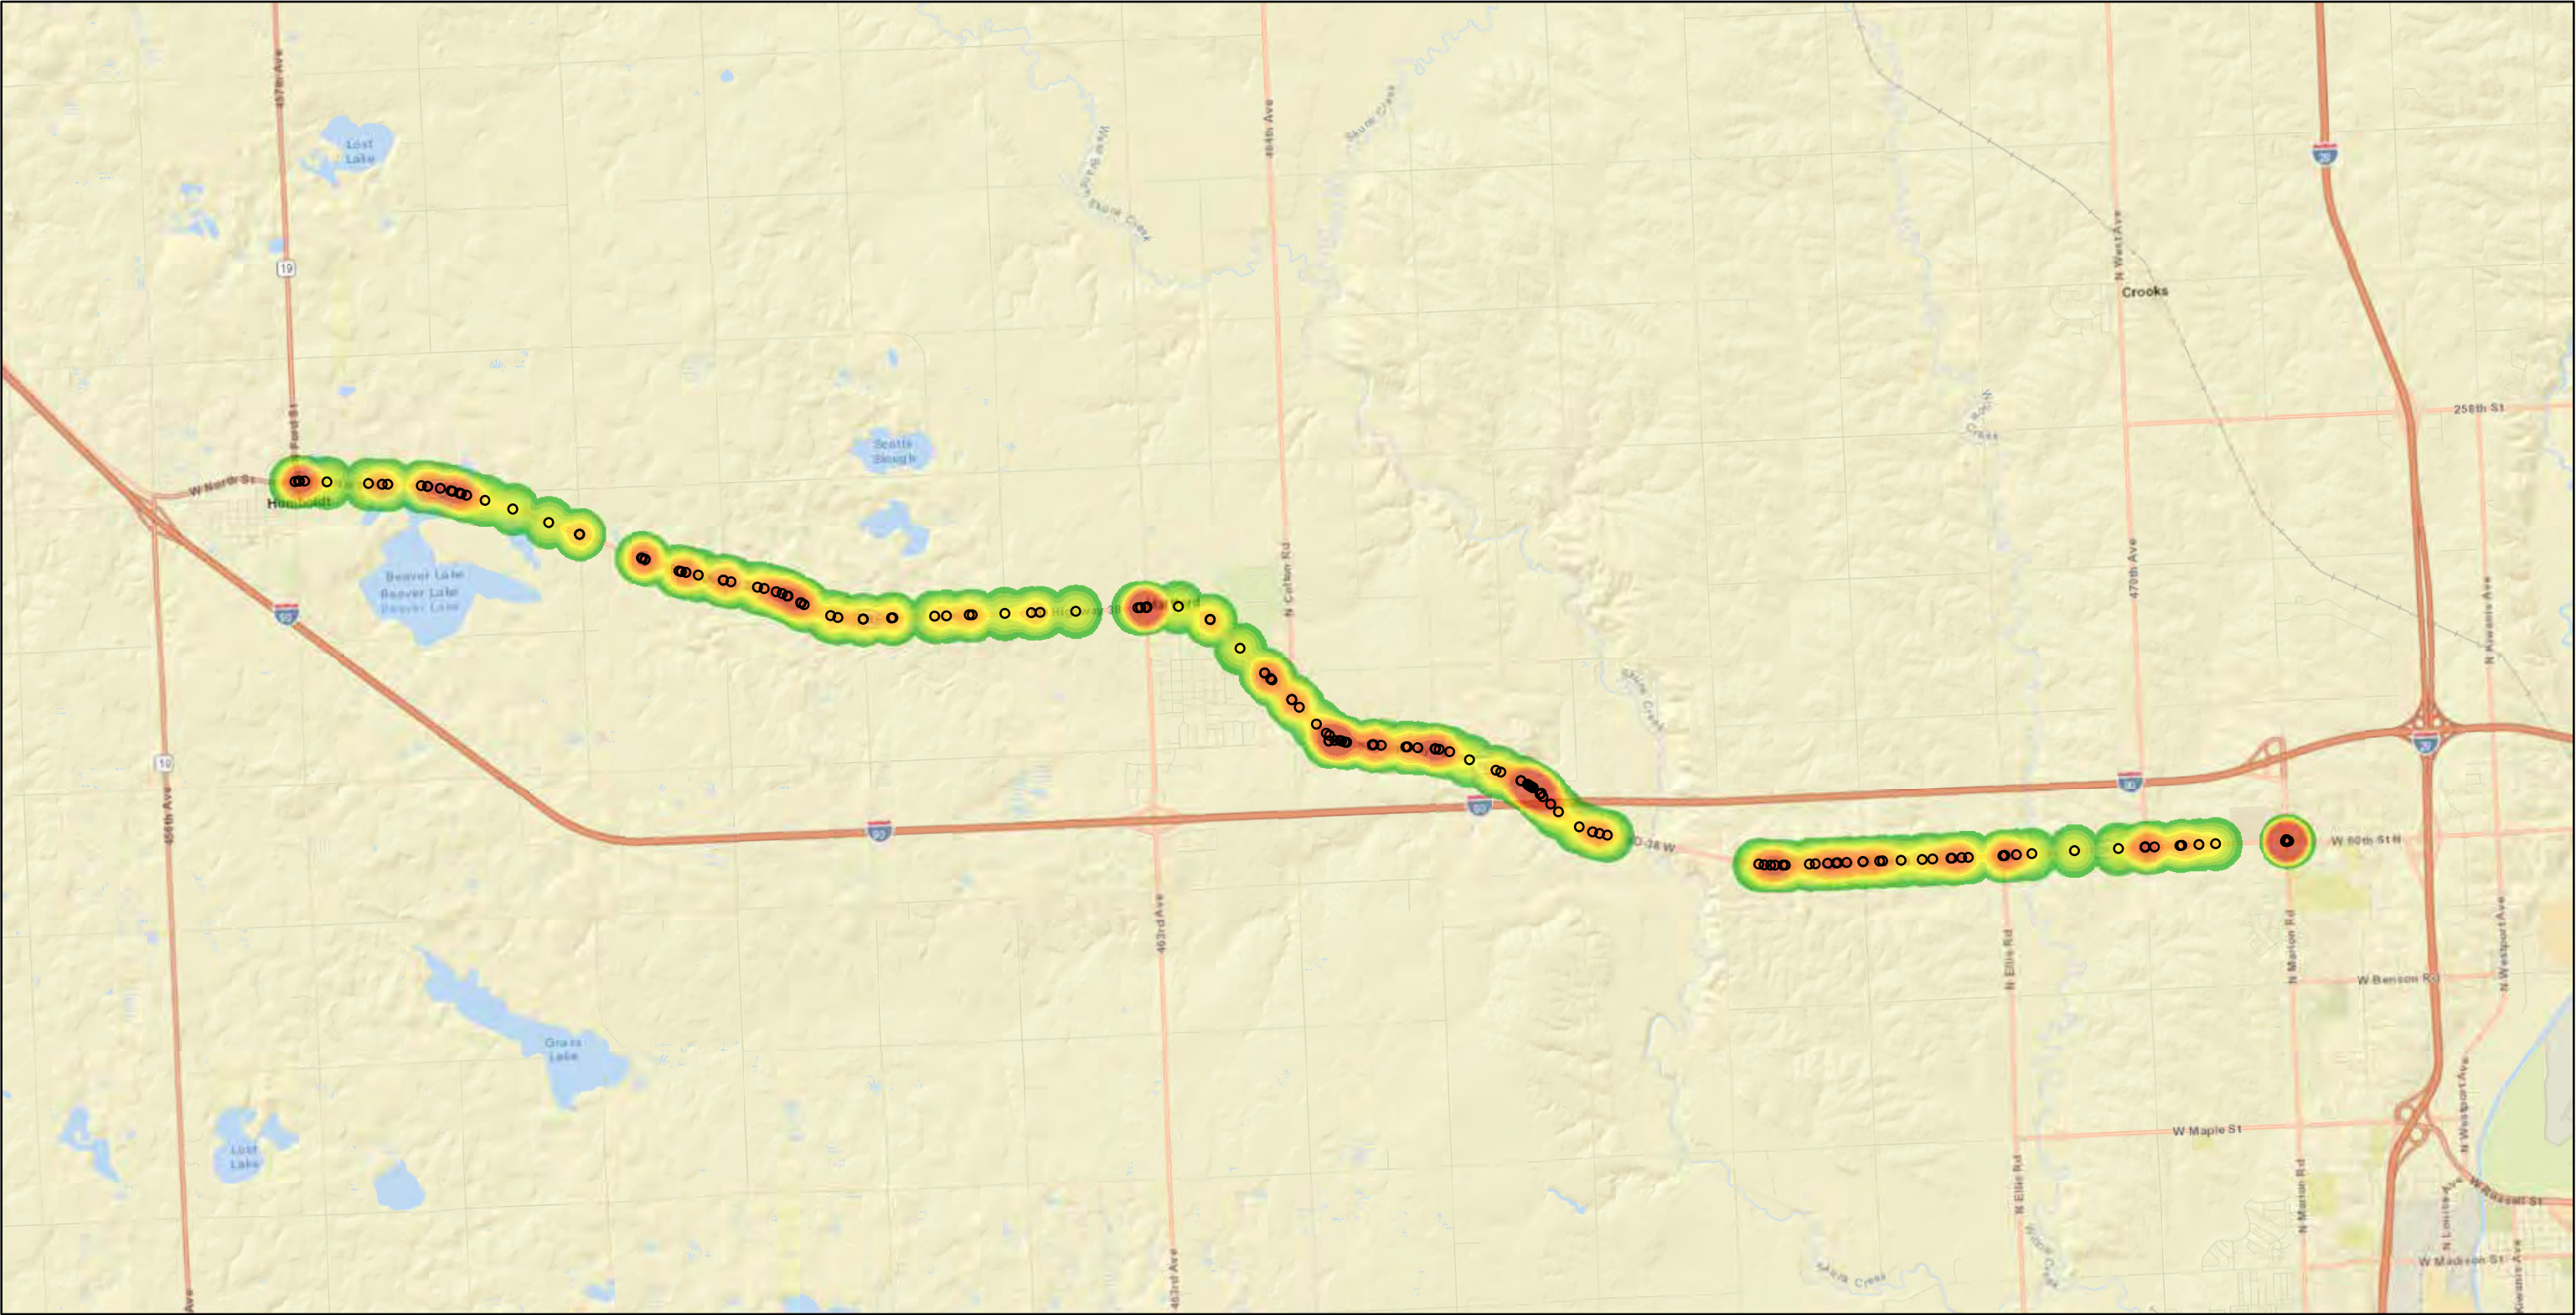

NOTE: RED INDICATES A VALUE ABOVE TARGET GOAL

TOTAL INJURY NUMBERS AND CRASH RATES ARE STATEWIDE GOALS.

The number of crash instances within the study area were evaluated and crash rates for fatal and serious injury incidents were calculated. Using the most recent 5-year crash history, the SD 38 study area had a fatal crash rate of 4.1 crashes per hundred million vehicle miles traveled (HMVMT) which exceeded the safety target fatal crash rate of 1.20 crashes per HMVMT and a serious injury crash rate of 8.1 crashes per HMVMT which exceeded the safety target serious injury crash rate of 1.20 crashes per HMVMT.

A depiction of the crash frequency along the SD Highway 38 corridor can be seen in **Figure 7** with higher frequency crash locations appearing in red. The fatal and major/minor injury incidents can be seen in **Figure 8**. The SD38 highway segment weight average crash rates can be seen in **Figure 9**.

## Summary

The purpose of this technical memorandum is to document the existing conditions traffic assessment at the eighteen study intersections and associated highway corridor segments along the SD Highway 38 corridor, from the SD Highway 19 intersection in Humboldt, South Dakota to the Marion Road intersection in Sioux Falls, South Dakota.

The existing conditions traffic assessment included the review of traffic volume data at the eighteen study intersections along the study corridor and determination of peak hour traffic volumes. The traffic volume data collection revealed that the peak hours of traffic along the corridor were generally from 7:15-8:15 AM and 4:45-5:45 PM. Using the established traffic volumes, the traffic operations at intersection and along the two-lane highway were evaluated. It was determined that all intersections and highway segment represented acceptable LOS.

The crash history was reviewed at the study intersections and compared to the predicted crashes per year. It was determined that the SD 38 & SD 19 and the SD 38 & Marion Road intersections experienced an average crash frequency higher than the predicted number of crashes per year. The study intersections represented 1 fatal incident, 3 major injury incidents, and 7 minor injury incidents. The majority of intersection crashes were categorized as Rear-end or Angle manner of crash. The primary causes of these crashes was determined to be Followed Too Closely and Failure to Yield to Vehicle.

The crash history was reviewed at the study highway segments and it was determined that the SD Highway 38 corridor had a weighted crash rate of 3.45 which is higher than the statewide average crash rate of 1.73 for rural minor arterials. The study highway segments represented 3 fatal incidents, 5 major injury incidents, and 5 minor injury incidents. The highway segment east of Hartford had the highest frequency of crash instances with 57 recorded crashes (45.9%). The majority of crashes along highway segments were the result of vehicle-animal strikes with 63 instances recorded (51%). Other contributing causes of crash instances were Followed Too Closely, Failure to Keep in Proper Lane, and Running Off Road.

It was further determined that the current fatal crash rate and serious injury crash rate along the SD 38 study corridor was above the safety performance targets established by the SDDOT and endorsed by the Sioux Falls Area MPO.

The existing year traffic volumes established in this report will be the basis for future year traffic projections and traffic capacity analysis studies in subsequent phases of this project.

# HCS Two-Lane Highway Report

## Project Information

Analyst	MJV	Date	12/28/2022
Agency	HRG	Analysis Year	2022
Jurisdiction	SDDOT	Time Analyzed	AM Peak
Project Description	SD 38 WB East of Hartford	Units	U.S. Customary

## Segment 1

### Vehicle Inputs

Segment Type	Passing Constrained	Length, ft	1727
Measured FFS	Measured	Free-Flow Speed, mi/h	70.0

### Demand and Capacity

Directional Demand Flow Rate, veh/h	156	Opposing Demand Flow Rate, veh/h	-
Peak Hour Factor	0.90	Total Trucks, %	8.97
Segment Capacity, veh/h	1700	Demand/Capacity (D/C)	0.09

### Intermediate Results

Segment Vertical Class	1	Free-Flow Speed, mi/h	70.0
Speed Slope Coefficient (m)	4.58112	Speed Power Coefficient (p)	0.41674
PF Slope Coefficient (m)	-1.27241	PF Power Coefficient (p)	0.76681
In Passing Lane Effective Length?	No	Total Segment Density, veh/mi/ln	0.6
%Improvement to Percent Followers	0.0	%Improvement to Speed	0.0

### Subsegment Data

#	Segment Type	Length, ft	Radius, ft	Superelevation, %	Average Speed, mi/h
1	Tangent	1727	-	-	68.6

### Vehicle Results

Average Speed, mi/h	68.6	Percent Followers, %	26.3
Segment Travel Time, minutes	0.29	Follower Density (FD), followers/mi/ln	0.6
Vehicle LOS	A		

### Bicycle Results

Percent Occupied Parking	0	Pavement Condition Rating	4
Flow Rate Outside Lane, veh/h	156	Bicycle Effective Width, ft	29
Bicycle LOS Score	3.34	Bicycle Effective Speed Factor	5.07
Bicycle LOS	C		

## Segment 2

# HCS Two-Lane Highway Report

## Project Information

Analyst	MJV	Date	12/28/2022
Agency	HRG	Analysis Year	2022
Jurisdiction	SDDOT	Time Analyzed	PM Peak
Project Description	WB 38 West of Hartford	Units	U.S. Customary

## Segment 1

### Vehicle Inputs

Segment Type	Passing Zone	Length, ft	10549
Measured FFS	Measured	Free-Flow Speed, mi/h	60.0

### Demand and Capacity

Directional Demand Flow Rate, veh/h	172	Opposing Demand Flow Rate, veh/h	111
Peak Hour Factor	0.90	Total Trucks, %	1.94
Segment Capacity, veh/h	1700	Demand/Capacity (D/C)	0.10

### Intermediate Results

Segment Vertical Class	1	Free-Flow Speed, mi/h	60.0
Speed Slope Coefficient (m)	4.37551	Speed Power Coefficient (p)	0.56943
PF Slope Coefficient (m)	-1.19248	PF Power Coefficient (p)	0.79019
In Passing Lane Effective Length?	No	Total Segment Density, veh/mi/ln	0.7
%Improvement to Percent Followers	0.0	%Improvement to Speed	0.0

### Subsegment Data

#	Segment Type	Length, ft	Radius, ft	Superelevation, %	Average Speed, mi/h
1	Tangent	5280	-	-	59.0

### Vehicle Results

Average Speed, mi/h	59.0	Percent Followers, %	25.7
Segment Travel Time, minutes	2.03	Follower Density (FD), followers/mi/ln	0.7
Vehicle LOS	A		

### Bicycle Results

Percent Occupied Parking	0	Pavement Condition Rating	4
Flow Rate Outside Lane, veh/h	172	Bicycle Effective Width, ft	28
Bicycle LOS Score	1.35	Bicycle Effective Speed Factor	5.07
Bicycle LOS	A		

## Segment 2

### Vehicle Inputs

Segment Type	Passing Zone	Length, ft	2793
Measured FFS	Measured	Free-Flow Speed, mi/h	70.0

Demand and Capacity					
Directional Demand Flow Rate, veh/h		172	Opposing Demand Flow Rate, veh/h		111
Peak Hour Factor		0.90	Total Trucks, %		1.94
Segment Capacity, veh/h		1700	Demand/Capacity (D/C)		0.10
Intermediate Results					
Segment Vertical Class		1	Free-Flow Speed, mi/h		70.0
Speed Slope Coefficient (m)		4.30491	Speed Power Coefficient (p)		0.56943
PF Slope Coefficient (m)		-1.16207	PF Power Coefficient (p)		0.83768
In Passing Lane Effective Length?		No	Total Segment Density, veh/mi/ln		0.6
%Improvement to Percent Followers		0.0	%Improvement to Speed		0.0
Subsegment Data					
#	Segment Type	Length, ft	Radius, ft	Superelevation, %	Average Speed, mi/h
1	Tangent	2793	-	-	69.0
Vehicle Results					
Average Speed, mi/h		69.0	Percent Followers, %		23.4
Segment Travel Time, minutes		0.46	Follower Density (FD), followers/mi/ln		0.6
Vehicle LOS		A			
Bicycle Results					
Percent Occupied Parking		0	Pavement Condition Rating		4
Flow Rate Outside Lane, veh/h		172	Bicycle Effective Width, ft		28
Bicycle LOS Score		1.35	Bicycle Effective Speed Factor		5.07
Bicycle LOS		A			
Segment 3					
Vehicle Inputs					
Segment Type		Passing Zone	Length, ft		3825
Measured FFS		Measured	Free-Flow Speed, mi/h		70.0
Demand and Capacity					
Directional Demand Flow Rate, veh/h		156	Opposing Demand Flow Rate, veh/h		89
Peak Hour Factor		0.90	Total Trucks, %		2.19
Segment Capacity, veh/h		1700	Demand/Capacity (D/C)		0.09
Intermediate Results					
Segment Vertical Class		1	Free-Flow Speed, mi/h		70.0
Speed Slope Coefficient (m)		4.30611	Speed Power Coefficient (p)		0.57939
PF Slope Coefficient (m)		-1.13558	PF Power Coefficient (p)		0.84742
In Passing Lane Effective Length?		No	Total Segment Density, veh/mi/ln		0.5
%Improvement to Percent Followers		0.0	%Improvement to Speed		0.0
Subsegment Data					

#	Segment Type	Length, ft	Radius, ft	Superelevation, %	Average Speed, mi/h
1	Tangent	3825	-	-	69.2

## Vehicle Results

Average Speed, mi/h	69.2	Percent Followers, %	20.9
Segment Travel Time, minutes	0.63	Follower Density (FD), followers/mi/ln	0.5
Vehicle LOS	A		

## Bicycle Results

Percent Occupied Parking	0	Pavement Condition Rating	4
Flow Rate Outside Lane, veh/h	156	Bicycle Effective Width, ft	29
Bicycle LOS Score	1.08	Bicycle Effective Speed Factor	5.07
Bicycle LOS	A		

## Segment 4

## Vehicle Inputs

Segment Type	Passing Constrained	Length, ft	791
Measured FFS	Measured	Free-Flow Speed, mi/h	70.0

## Demand and Capacity

Directional Demand Flow Rate, veh/h	156	Opposing Demand Flow Rate, veh/h	-
Peak Hour Factor	0.90	Total Trucks, %	2.19
Segment Capacity, veh/h	1700	Demand/Capacity (D/C)	0.09

## Intermediate Results

Segment Vertical Class	1	Free-Flow Speed, mi/h	70.0
Speed Slope Coefficient (m)	4.57372	Speed Power Coefficient (p)	0.41674
PF Slope Coefficient (m)	-1.29358	PF Power Coefficient (p)	0.75776
In Passing Lane Effective Length?	No	Total Segment Density, veh/mi/ln	0.6
%Improvement to Percent Followers	0.0	%Improvement to Speed	0.0

## Subsegment Data

#	Segment Type	Length, ft	Radius, ft	Superelevation, %	Average Speed, mi/h
1	Tangent	791	-	-	68.6

## Vehicle Results

Average Speed, mi/h	68.6	Percent Followers, %	27.1
Segment Travel Time, minutes	0.13	Follower Density (FD), followers/mi/ln	0.6
Vehicle LOS	A		

## Bicycle Results

Percent Occupied Parking	0	Pavement Condition Rating	4
Flow Rate Outside Lane, veh/h	156	Bicycle Effective Width, ft	29
Bicycle LOS Score	1.08	Bicycle Effective Speed Factor	5.07
Bicycle LOS	A

Subject: SD Highway 38 – Future No-Build Traffic Operations and Safety Analysis

Date: January 16, 2024

---

## Introduction

The South Dakota Department of Transportation (SDDOT), City of Hartford, Town of Humboldt, City of Sioux Falls, Sioux Falls Metropolitan Planning Organization (MPO), Minnehaha County, and Federal Highway Administration (FHWA) initiated an assessment of approximately 14.2 miles of the SD Highway 38 (SD 38) corridor from the SD Highway 19 intersection in Humboldt, South Dakota to the Marion Road intersection in Sioux Falls, South Dakota. The study segment of SD 38 is predominantly a rural two-lane highway and located in a rapidly developing area and serves as a viable alternate route to Interstate-90. Development pressure is expected to impact the SD 38 corridor with higher traffic volumes, greater demand for multi-modal (bike and pedestrian) uses, and additional access management concerns.

Segments of the SD 38 corridor are expected to need major rehabilitation or reconstruction within the next 10 to 15 years. Primary concerns of this study are to ensure the roadway is reconstructed to meet future traffic volume demands.

The purpose of this technical memorandum is to document the future no-build traffic assessment in support of the study being completed along SD 38. This technical report will provide a future year conditions assessment of the two-lane highway and at each of the study intersections. **Table 1** depicts the eighteen study intersections reviewed as part of the existing conditions assessment and traffic data review.

TABLE 1: SD 38 STUDY INTERSECTIONS

Main Line	Cross Street(s)
SD Highway 38	SD Highway 19 / 457 <sup>th</sup> Avenue
SD Highway 38	459 <sup>th</sup> Avenue
SD Highway 38	I-90 Speedway Entrance
SD Highway 38	Western Avenue / 463 <sup>rd</sup> Avenue
SD Highway 38	Main Avenue
SD Highway 38	Vandemark Avenue
SD Highway 38	2 <sup>nd</sup> Street
SD Highway 38	West Central High School Entrance
SD Highway 38	Railroad Street / 464 <sup>th</sup> Avenue
SD Highway 38	Mickelson Road/260 <sup>th</sup> Street
SD Highway 38	466 <sup>th</sup> Avenue (North)
SD Highway 38	WB I-90 Exit 390
SD Highway 38	EB I-90 Exit 390
SD Highway 38	466 <sup>th</sup> Avenue (South)
SD Highway 38	County Highway 141 / 468 <sup>th</sup> Avenue
SD Highway 38	County Highway 139 / 469 <sup>th</sup> Avenue
SD Highway 38	La Mesa Drive / 470 <sup>th</sup> Avenue
SD Highway 38	Marion Road

### *Existing Traffic Data*

The existing traffic volume data for the SD 38 corridor was developed from 12-hour count data collected on November 2, 2022, for 17 intersections. Event traffic data for the I-90 Speedway intersection was developed from 14-hour count data collected on May 27<sup>th</sup>, 2023 at the intersection of SD 38 & the I-90 Speedway Entrance. The count data included turning movements by approach in 15-minute intervals with composition of passenger vehicles and trucks. Review of the traffic volume data revealed the peak hour periods occurred between 7:15-8:15 AM and 4:45-5:45 PM. The daily traffic data was provided by SDDOT.

### *Traffic Forecast Methodology*

In order to evaluate the existing infrastructure under future traffic conditions, the 2050 ADT volumes were collected from the Sioux Falls Metropolitan Planning Organization (SFMPO) Travel Demand Model (TDM). These forecasted volumes account for localized traffic growth, changes in traffic patterns, and any planned roadway improvements. To determine the traffic growth within the study area and estimate 2050 peak hour volumes, the 2018 base year ADT was referenced from the TDM. Additionally, the future year ADT was acquired from available SDDOT GIS data to account for portions of SD 38 that were outside the TDM boundaries. Available development site plans were sourced and any planned development trips that had not been included in the TDM were incorporated into the future year forecasted volumes.

The growth calculated from the ADT values were used to develop 2050 design year morning (AM) and afternoon (PM) peak hour volumes at study intersections. The peak hour volumes will be used for the traffic analysis to assess the level of operations for intersections within the study area.

Additional traffic characteristics such as the heavy vehicle percentages were established during the existing year traffic forecast development. The values established under existing year traffic are anticipated to remain relatively consistent through the future year traffic condition and were used during the 2050 design year analysis.

To develop the interim year traffic conditions, straight-line growth rates between the existing year ADT volumes and the estimated 2050 ADT volumes were calculated and the interim year traffic volumes were interpolated. Interim year 2029 and 2040 traffic forecasts were developed.

The estimated interim year 2029 and 2040 morning (AM) and afternoon (PM) peak hour volumes were developed by process of interpolation using straight-line growth assumptions based on the existing year and future year 2050 traffic volumes. The peak hour volumes were used for the traffic analysis to assess the level of operations for intersections and highway segments within the study area.

### *Traffic Operations Methodology*

Intersection level of service (LOS) is primarily a function of peak hour turning movement volumes, intersection lane configuration, and traffic control. For intersection analysis, the Highway Capacity Manual (HCM) defines LOS in terms of the average control delay at the intersection in seconds per vehicle. The results of a HCM analysis are typically presented in the form of a letter grade (A-F) that provides a qualitative estimate of the operational efficiency or effectiveness of the corridor. Much like an academic report card, LOS A represents the best range of operating conditions (i.e., motorists experiencing little delay or congestion) and LOS F represents the worst (i.e., extreme delay or severe congestion).

**Table 2** defines the control delay range corresponding to each LOS for unsignalized and signalized intersection locations. At intersections, LOS E is considered to be at capacity and typically represents a scenario in which significant queuing is present or traffic signal cycle failure is evident. For unsignalized intersections, the intersection LOS is given by the worst approach LOS. For instance, an intersection with LOS D on one approach and LOS B on the rest would result in LOS D for the intersection.

TABLE 2: LEVEL OF SERVICE FOR CONTROL DELAY (INTERSECTIONS)

Level Of Service	Unsignalized	Traffic Signal
	Control Delay (sec/veh)	Control Delay (sec/veh)
A	≤ 10	≤ 10
B	> 10 and ≤ 15	> 10 and ≤ 20
C	> 15 and ≤ 25	> 20 and ≤ 35
D	> 25 and ≤ 35	> 35 and ≤ 55
E	> 35 and ≤ 50	> 55 and ≤ 80
F	> 50	> 80

Source: Highway Capacity Manual, 7<sup>th</sup> Edition.

Following SDDOT guidance, LOS C is the desired minimum traffic operational goal for intersections in rural environments while LOS D is an acceptable operational goal for intersections in dense urban environments. The intersections within the study area have a desired traffic operational goal of LOS C.

**Table 3** defines the follower density range corresponding to each LOS for two-lane highway segments. On two-lane highways, LOS E is considered to be at capacity. For two-lane highway segments, a LOS B would represent a scenario where some platooning is present with the potential passing demand and passing opportunities balanced while a LOS D would represent a scenario where significant platooning is present and passing demand far exceeds passing opportunities.

TABLE 3: LEVEL OF SERVICE FOR FOLLOWER DENSITY (TWO-LANE HIGHWAYS)

Level Of Service	Speed ≥ 50 mph	Speed < 50 mph
	Follower Density (followers/mi/ln)	Follower Density (followers/mi/ln)
A	≤ 2.0	≤ 2.5
B	> 2.0 - 4.0	> 2.5 – 5.0
C	> 4.0 – 8.0	> 5.0 – 10.0
D	> 8.0 – 12.0	> 10.0 – 15.0
E	> 12.0	> 15.0
F	Demand exceeds capacity	

Source: Highway Capacity Manual, 7<sup>th</sup> Edition.

Following SDDOT guidance, LOS C is the desired traffic operational goal for highways in rural environments (functional classification of collector) and LOS D is considered the minimal acceptable operations for highways in urban environments (functional classification of minor arterial). The SD 38 highway segments within the study area are categorized as rural with federal functional classification of collector between Humboldt to Hartford and categorized as urban with federal functional classification of minor arterial between Hartford to Sioux Falls. The two-lane highway segments within the study area have a desired traffic operational goal of LOS C.

The highway was segmented according to the two-lane highway methodology presented in chapter 15 of HCM7, with segment breaks reflecting the passing zones. The segmentation for analysis can be seen in the Appendix.

The following analysis years/scenarios were evaluated for traffic operational analysis:

- Opening year 2029 No-Build.
- Interim year 2040 No-Build.
- Design year 2050 No-Build.

Operational analysis was completed for the AM and PM peak hour periods of each scenario.

## Future Traffic Operations

Traffic operations analysis for the study area intersections included capacity evaluation using the Highway Capacity Manual (HCM) 7<sup>th</sup> Edition techniques thru use of the Highway Capacity Software (HCS) 2022. Output reports from the HCS2022 software are available in the Appendix.

Traffic operations analysis for the study area SD Highway 38 corridor included capacity evaluation using the Highway Capacity Manual (HCM) 7<sup>th</sup> Edition techniques through use of the Highway Capacity Software (HCS) 2022. The two-lane highway traffic operations analysis used existing highway geometry with planned improvements, future year traffic volumes and posted travel speeds. Planned improvements to the SD 38 corridor include the construction of eastbound and westbound left turn lanes at the SD 38 & 459<sup>th</sup> Avenue intersection as well as roadway widening of the SD 38 corridor between Railroad Street/ 464<sup>th</sup> Avenue to 465<sup>th</sup> Street to a three-lane cross section with center two-way left turn lane.

Output reports from the HCS2022 software are available in the Appendix.

## Opening Year 2029

Opening Year 2029 traffic operations analysis used existing intersection geometry with planned improvements, future year traffic volumes and posted travel speeds. The results of the Opening Year 2029 intersection capacity analysis can be seen in **Figure 1** and **Table 4** below.

TABLE 4: HCM TRAFFIC INTERSECTION OPERATIONS – OPENING 2029

18	Marion Road	Signal	16.2	B	20.6	C

Notes: Bold/Highlighted indicates a poor LOS

Under the Opening Year 2029 conditions, the traffic operations analysis showed acceptable operations at the majority of intersections within the study area, with intersections achieving LOS C or greater during both the AM and PM peak hours. The SD 38 & Mickelson Road/260<sup>th</sup> Street intersection which produced a LOS F during the PM peak hour which can be attributed to the additional development traffic demand at this intersection.

The results of the two-lane highway capacity analysis can be seen in **Table 5** and **Table 6**.

Notes: Bold/Highlighted indicates a poor LOS

Under the Opening Year 2029 conditions, the traffic operations analysis showed acceptable operations at all of the highway segments within the study area, with all segments achieving LOS C or greater during both the AM and PM peak hours.

In general, the Opening Year 2029 condition traffic operations demonstrated acceptable performance measures throughout the majority of intersections and highway segments within the study area. The desired LOS was realized for all intersections and highway segments during the AM and PM peak hours with the exception of the Mickelson Road/260<sup>th</sup> Street intersection.

## Interim Year 2040

Interim Year 2040 traffic operations analysis used future year traffic volumes and posted travel speeds. The SD 38 & Mickelson Road/260<sup>th</sup> Street intersection was analyzed under traffic signal control. The results of the Interim Year 2040 intersection capacity analysis can be seen in **Figure 2** and **Table 7** below.

TABLE 7: HCM TRAFFIC INTERSECTION OPERATIONS – INTERIM YEAR 2040

ID #	SD Hwy 38 Cross Street(s)	Intersection Control	AM PEAK HOUR		PM PEAK HOUR

18	Marion Road	Signal	17.2	B	26.5	C

Notes: Bold/Highlighted indicates a poor LOS

Under the Interim Year 2040 conditions, the traffic operations analysis showed acceptable operations at the majority of intersections within the study area, with intersections achieving LOS C or greater during both the AM and PM peak hours. The six study intersections of SD 38 & 2<sup>nd</sup> Street, SD 38 & Railroad Street/464<sup>th</sup> Avenue, SD 38 & 466<sup>th</sup> Avenue (North), SD 38 & WB I-90, SD 38 & County Highway 139/469<sup>th</sup> Avenue, and SD 38 & La Mesa Drive/470<sup>th</sup> Avenue all produced a LOS D during at least one peak hour which does not meet the LOS goal established by the SDDOT.

The results of the two-lane highway capacity analysis can be seen in **Table 8** and **Table 9**.

Notes: Bold/Highlighted indicates a poor LOS

Under the Interim Year 2040 conditions, the traffic operations analysis showed acceptable operations at all of the highway segments within the study area, with segments achieving LOS C or greater during both the AM and PM peak hours.

In general, the Interim Year 2040 condition traffic operations demonstrated acceptable performance measures throughout the majority of intersections and highway segments within the study area. The desired LOS was realized for the majority of intersections and highway segments during the AM and PM peak hours with the exception of five study intersections that had LOS D.

## Design Year 2050

Design Year 2050 traffic operations analysis used future year traffic volumes and posted travel speeds. The SD 38 & Mickelson Road/260<sup>th</sup> Street intersection was analyzed under traffic signal control. The results of the Design Year 2050 intersection capacity analysis can be seen in **Figure 3** and **Table 10** below.

TABLE 10: HCM TRAFFIC INTERSECTION OPERATIONS – DESIGN YEAR 2050

Notes: Bold/Highlighted indicates a poor LOS

Under the Design Year 2050 conditions, the traffic operations analysis showed potential capacity constraints and inefficiencies at many intersections within the study area. The nine study intersections of SD 38 & Western Avenue/463<sup>rd</sup> Avenue, SD 38 & Main Avenue, SD 38 & 2<sup>nd</sup> Street, SD 38 & Railroad Street/464<sup>th</sup> Avenue, SD 38 & 466<sup>th</sup> Avenue (North), SD 38 & WB I-90, SD 38 & EB I-90, SD 38 & County Highway 139/469<sup>th</sup> Avenue, and SD 38 & La Mesa Drive/470<sup>th</sup> Avenue all produced a LOS D or worse during at least one peak hour which does not meet the LOS goal established by the SDDOT.

The results of the two-lane highway capacity analysis can be seen in **Table 11** and **Table 12**.

Notes: Bold/Highlighted indicates a poor LOS

Under the Design Year 2050 conditions, the traffic operations analysis showed potential capacity constraints at some segments within the study area. There were four eastbound segments and eight westbound segments that resulted in LOS D during at least one of the peak hours. The segments represent areas of focus for potential capacity improvements.

Overall, the Design Year 2050 condition traffic operations demonstrated the areas within the study limits that could benefit most from potential improvements. The desired LOS was realized for the majority of intersections and highway segments during the AM and PM peak hours but there were notable exceptions that did not meet the LOS criteria goals. The recognition of issues at these locations will be used to guide future concepts.

## Event Traffic Analysis

Traffic data was collected at the I-90 Speedway during a race event which occurred on May 27<sup>th</sup>, 2023. The traffic data was collected for a 14-hour period between 1PM – 3AM to ensure the entirety of the event traffic was recorded. Review of the traffic data revealed that the peak hours associated with the arrival of vehicles to the event and departure of vehicles from the event were 5:45 – 6:45PM and 12:15 – 1:15AM, respectively. The peak hour traffic volumes can be seen below in **Figure 4**.

FIGURE 4: EVENT TRAFFIC EXHIBIT

Existing Year 2022 traffic operations analysis used existing intersection geometry, event traffic volumes, and posted travel speeds. The results of the intersection capacity analysis can be seen in **Table 13** below.

TABLE 13: HCM TRAFFIC INTERSECTION OPERATIONS – EVENT TRAFFIC

SD Hwy 38 Cross Street(s)	Control Type	Intersection LOS / Delay (sec/veh)				EB	WB	SB
		Arrival		Departure		95% Queue Length (veh)	95% Queue Length (veh)	95% Queue Length (veh)
I-90 Speedway Entrance	TWSC	12.7	B	16.5	C	0.2	0	5.9

Notes: Bold/Highlighted indicates a poor LOS

Under the Existing Year 2022 conditions, the traffic operations analysis showed acceptable operations at the study intersection under the event traffic, with the intersection achieving LOS C or greater during the peak hours. There were no significant delays or vehicle queues produced during the HCM analysis. Observations from review of the video collected at this intersection, indicated that there was a maximum queue of 5 vehicles on the eastbound SD 38 approach. Additionally, there were several observed occurrences of westbound through vehicles utilizing the oncoming traffic lanes to pass slowing or turning vehicles that were entering the speedway.

## *Predictive Safety Analysis*

Safety analysis of locations within the SD Highway 38 study corridor area of influence was completed for the design year 2050 No-Build scenario. Existing crash analysis was completed by summarizing recent historical crashes and reviewing crash trends and can be seen in the previously submitted Existing Traffic and Operations Analysis technical memo. Predictive crash analysis was completed using the Interactive Highway Safety Design Model (IHSDM) Crash Prediction analysis tool to evaluate the safety effects and predict the expected change in crashes between design year scenarios.

Results of the IHSDM evaluation—which supports the Federal Highway Administration's (FHWA's) Data-Driven Safety Analysis (DDSA) initiative—will assist with identifying design features or segments along the roadway with the greatest potential for improvement and quantify its expected safety performance. This approach combined crash, roadway inventory, and traffic volume data to provide more reliable estimates of the proposed roadway's expected safety performance. Ultimately, these results could support agencies decision making in the highway design process and inform the public as to what safety benefits can be expected from the investment.

Design year 2050 crash analysis determined the expected crash frequency and predicted crash frequency within the SD Highway 38 area of influence resulting from the No-Build roadway conditions. Predicted crash frequency is a measure of safety performance based on segments or intersections of a common facility type. Predictive crash frequency accounts for changes in traffic volume, roadway characteristics, and general time trends, but does not consider the historical crash data. The expected crash frequency is the combination of observed and predicted crash frequencies using the Empirical Bayes (EB) method to compute a weighted average. Expected crash frequency accounts for changes in traffic volume, roadway characteristics, and general time trends, and considers the historical crash data. However, the expected crash frequency is not applicable when facility type changes. To account for the potential future roadway changes we have included both the predicted and expected crash results.

In addition to crash frequency, the expected crash severity was determined by IHSDM. Crash severity represents the highest level of injury of all vehicle occupants.

A summary of the expected and predicted crashes for the SD Highway 38 segments between SD Highway 19 and Marion Road are provided in **Table 14** and **Table 15**. Along the SD 38 segments, there were a several segments that produced a high number of crash incidents. The segments from 459<sup>th</sup> Ave to Western Avenue, Mickelson Road to 466<sup>th</sup> Avenue (North), and the three segments between 466<sup>th</sup> Avenue (South) to La Mesa Drive all indicated the potential for safety performance improvements. The expected crash type distribution for segments indicated that run-off road and rear-end crashes were the most frequent crash types.

A summary of the expected and predicted crashes for the SD Highway 38 intersections are provided in **Table 16** and **Table 17**. There were several intersections that demonstrated a high number of crash instances. The SD 38 intersections with Western Avenue/463<sup>rd</sup> Street, Main Avenue, 2<sup>nd</sup> Street, Railroad Street/464<sup>th</sup> Avenue, and Marion Road all indicated the potential for safety performance improvements. The expected crash type distribution for intersections indicated that angle crashes and rear-end crashes were the most frequent crash types.

Angle	245.00
Sideswipe	59.86
Head-on	27.53
Rear-end	196.55
Others	67.73
Total Crashes	682.16

## Summary

The purpose of this technical memorandum is to document the future no-build traffic assessment at the eighteen study intersections and associated highway corridor segments along the SD Highway 38 corridor, from the SD Highway 19 intersection in Humboldt, South Dakota to the Marion Road intersection in Sioux Falls, South Dakota.

Future year 2050 traffic forecasts were constructed using traffic data supplied by the SFMPO and the SDDOT. This data was used to develop 2050 design year morning (AM) and afternoon (PM) peak hour volumes at study intersections. To develop the interim year traffic conditions, straight-line growth rates between the existing year ADT volumes and the estimated 2050 ADT volumes were calculated and the interim year traffic volumes were interpolated to develop interim year 2029 and 2040 traffic forecasts.

Using the established traffic volumes, the traffic operations at study intersections and along the two-lane highway were evaluated. The no-build conditions traffic assessment revealed that there are intersections and highway segments that will need capacity improvements within the design year timeframe.

The traffic operations analysis indicated that the following intersections and highway segments should be investigated for future capacity or operational improvements:

- ◆ SD Highway 38 & Western Avenue/463<sup>rd</sup> Avenue,
- ◆ SD Highway 38 & Main Avenue,
- ◆ SD Highway 38 & 2<sup>nd</sup> Street,
- ◆ SD Highway 38 & Railroad Street/464<sup>th</sup> Avenue,
- ◆ SD Highway 38 & 466<sup>th</sup> Avenue (North),
- ◆ SD Highway 38 & WB I-90 ramps,
- ◆ SD Highway 38 & EB I-90 ramps,
- ◆ SD Highway 38 & County Highway 139/469<sup>th</sup> Avenue, and
- ◆ SD Highway 38 & La Mesa Drive/470<sup>th</sup> Avenue,
- ◆ SD Highway 38 segment between Railroad Street/464<sup>th</sup> Street and EB I-90 ramps,
- ◆ SD Highway 38 segment between County Highway 139/469<sup>th</sup> Avenue and La Mesa Drive/470<sup>th</sup> Avenue.

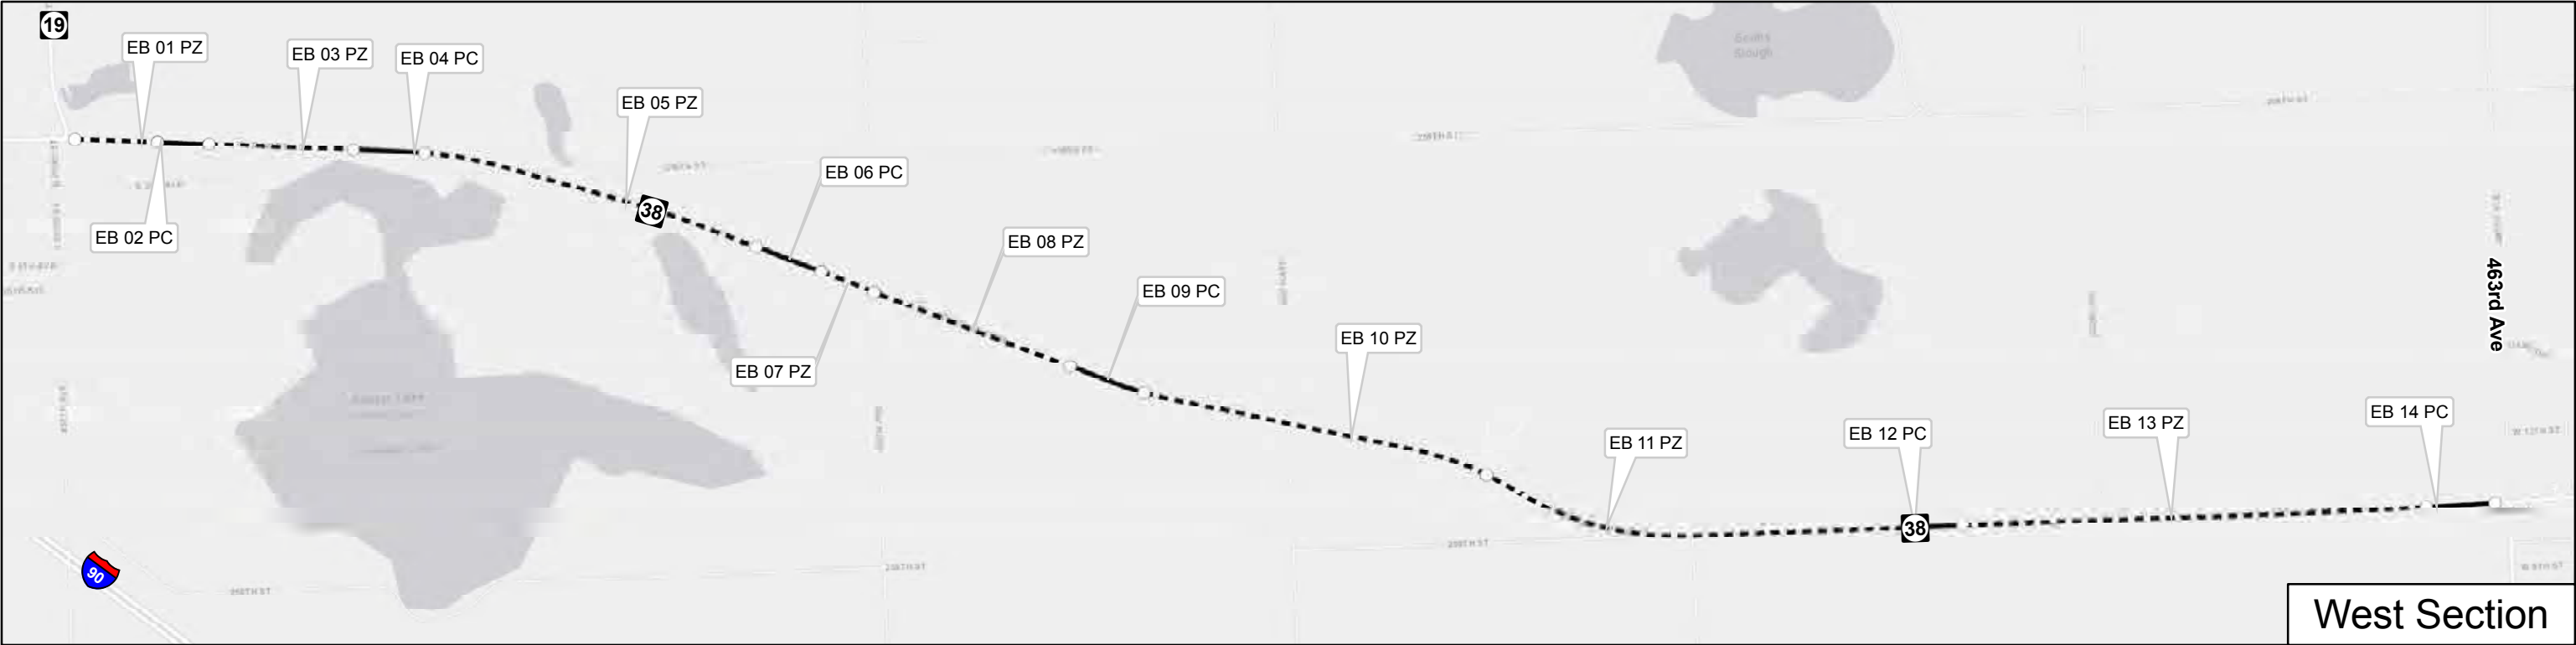

A predictive safety analysis of the SD Highway 38 study corridor was completed for the design year 2050 No-Build scenario. Along the SD 38 segments, there were a several intersections and highway segments that produced a high number of crash incidents that indicated a need for potential safety improvements.

The traffic safety analysis indicated that the following intersections and highway segments should be investigated for future safety improvements:

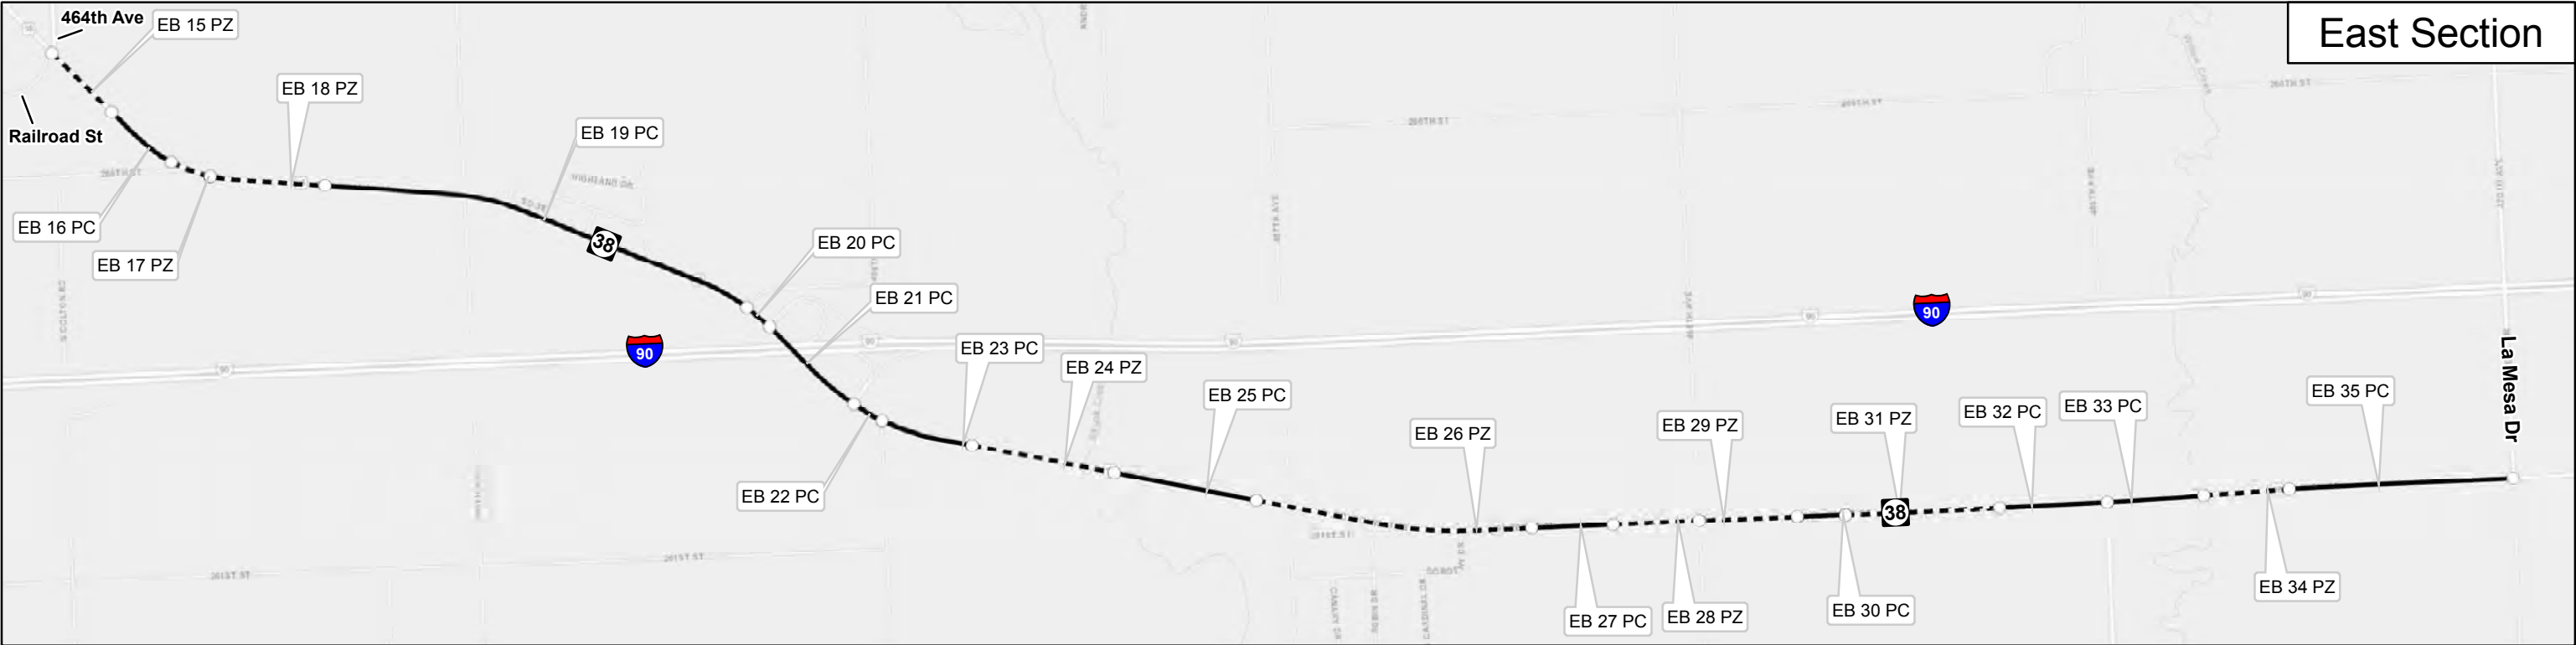

- ◆ SD Highway 38 & Western Avenue/463<sup>rd</sup> Avenue,
- ◆ SD Highway 38 & Main Avenue,
- ◆ SD Highway 38 & 2<sup>nd</sup> Street,
- ◆ SD Highway 38 & Railroad Street/464<sup>th</sup> Avenue,
- ◆ SD Highway 38 & Mickelson Road/260<sup>th</sup> Street, and
- ◆ SD Highway 38 & Marion Road,
- ◆ SD Highway 38 segment between 459<sup>th</sup> Street and Western Avenue/463<sup>rd</sup> Avenue,
- ◆ SD Highway 38 segment between Mickelson Road/260<sup>th</sup> Street and 466<sup>th</sup> Avenue (North),
- ◆ SD Highway 38 segment between 466<sup>th</sup> Avenue (South) and La Mesa Drive/470<sup>th</sup> Avenue.

# HCS Two-Lane Highway Report

## Project Information

Analyst	MJV	Date	3/15/2023
Agency	HRG	Analysis Year	2050 NB
Jurisdiction	SDDOT	Time Analyzed	AM PEAK
Project Description	EB SD38 Corridor Study	Units	U.S. Customary

## Segment 1

### Vehicle Inputs

Segment Type	Passing Zone	Length, ft	1084
Measured FFS	Measured	Free-Flow Speed, mi/h	55.0

### Demand and Capacity

Directional Demand Flow Rate, veh/h	405	Opposing Demand Flow Rate, veh/h	245
Peak Hour Factor	0.88	Total Trucks, %	2.16
Segment Capacity, veh/h	1700	Demand/Capacity (D/C)	0.24

### Intermediate Results

Segment Vertical Class	1	Free-Flow Speed, mi/h	55.0
Speed Slope Coefficient (m)	4.33465	Speed Power Coefficient (p)	0.52741
PF Slope Coefficient (m)	-1.33665	PF Power Coefficient (p)	0.76555
In Passing Lane Effective Length?	No	Total Segment Density, veh/mi/ln	3.7
%Improvement to Percent Followers	0.0	%Improvement to Speed	0.0

### Subsegment Data

#	Segment Type	Length, ft	Radius, ft	Superelevation, %	Average Speed, mi/h
1	Tangent	1084	-	-	52.7

### Vehicle Results

Average Speed, mi/h	52.7	Percent Followers, %	48.8
Segment Travel Time, minutes	0.23	Follower Density (FD), followers/mi/ln	3.7
Vehicle LOS	B		

### Bicycle Results

Percent Occupied Parking	0	Pavement Condition Rating	4
Flow Rate Outside Lane, veh/h	405	Bicycle Effective Width, ft	24
Bicycle LOS Score	2.75	Bicycle Effective Speed Factor	4.62
Bicycle LOS	C		

## Segment 2

### Vehicle Inputs

Segment Type	Passing Constrained	Length, ft	507
Measured FFS	Measured	Free-Flow Speed, mi/h	55.0

Demand and Capacity					
Directional Demand Flow Rate, veh/h		405	Opposing Demand Flow Rate, veh/h		-
Peak Hour Factor		0.88	Total Trucks, %		2.16
Segment Capacity, veh/h		1700	Demand/Capacity (D/C)		0.24
Intermediate Results

# HCS Two-Lane Highway Report

## Project Information

Analyst	MJV	Date	5/11/2023
Agency	HRG	Analysis Year	2029 NB
Jurisdiction	SDDOT	Time Analyzed	PM Peak
Project Description	WB 38 West of Hartford	Units	U.S. Customary

## Segment 1

### Vehicle Inputs

Segment Type	Passing Zone	Length, ft	10549
Measured FFS	Measured	Free-Flow Speed, mi/h	70.0

### Demand and Capacity

Directional Demand Flow Rate, veh/h	189	Opposing Demand Flow Rate, veh/h	118
Peak Hour Factor	0.88	Total Trucks, %	1.94
Segment Capacity, veh/h	1700	Demand/Capacity (D/C)	0.11

### Intermediate Results

Segment Vertical Class	1	Free-Flow Speed, mi/h	70.0
Speed Slope Coefficient (m)	4.37894	Speed Power Coefficient (p)	0.56653
PF Slope Coefficient (m)	-1.13897	PF Power Coefficient (p)	0.81724
In Passing Lane Effective Length?	No	Total Segment Density, veh/mi/ln	0.7
%Improvement to Percent Followers	0.0	%Improvement to Speed	0.0

### Subsegment Data

#	Segment Type	Length, ft	Radius, ft	Superelevation, %	Average Speed, mi/h
1	Tangent	10549	-	-	68.9

### Vehicle Results

Average Speed, mi/h	68.9	Percent Followers, %	25.3
Segment Travel Time, minutes	1.74	Follower Density (FD), followers/mi/ln	0.7
Vehicle LOS	A		

### Bicycle Results

Percent Occupied Parking	0	Pavement Condition Rating	4
Flow Rate Outside Lane, veh/h	189	Bicycle Effective Width, ft	24
Bicycle LOS Score	2.44	Bicycle Effective Speed Factor	5.07
Bicycle LOS	B		

## Segment 2

### Vehicle Inputs

Segment Type	Passing Zone	Length, ft	2793
Measured FFS	Measured	Free-Flow Speed, mi/h	70.0

Demand and Capacity					
Directional Demand Flow Rate, veh/h		189	Opposing Demand Flow Rate, veh/h		118

## Segment 1

### Vehicle Inputs

Segment Type	Passing Zone	Length, ft	1084
Measured FFS	Measured	Free-Flow Speed, mi/h	55.0

### Demand and Capacity

Directional Demand Flow Rate, veh/h	480	Opposing Demand Flow Rate, veh/h	289
Peak Hour Factor	0.88	Total Trucks, %	2.16
Segment Capacity, veh/h	1700	Demand/Capacity (D/C)	0.28

### Intermediate Results

Segment Vertical Class	1	Free-Flow Speed, mi/h	55.0
Speed Slope Coefficient (m)	4.34836	Speed Power Coefficient (p)	0.51760
PF Slope Coefficient (m)	-1.34657	PF Power Coefficient (p)	0.76322
In Passing Lane Effective Length?	No	Total Segment Density, veh/mi/ln	4.9
%Improvement to Percent Followers	0.0	%Improvement to Speed	0.0

### Subsegment Data

#	Segment Type	Length, ft	Radius, ft	Superelevation, %	Average Speed, mi/h
1	Tangent	1084	-	-	52.4

### Vehicle Results

Average Speed, mi/h	52.4	Percent Followers, %	53.6
Segment Travel Time, minutes	0.24	Follower Density (FD), followers/mi/ln	4.9
Vehicle LOS	C		

### Bicycle Results

Percent Occupied Parking	0	Pavement Condition Rating	4
Flow Rate Outside Lane, veh/h	480	Bicycle Effective Width, ft	24
Bicycle LOS Score	2.84	Bicycle Effective Speed Factor	4.62
Bicycle LOS	C		

## Segment 2

# HCS Two-Lane Highway Report

## Project Information

Analyst	MJV	Date	5/11/2023
Agency	HRG	Analysis Year	2050 NB
Jurisdiction	SDDOT	Time Analyzed	AM PEAK
Project Description	EB SD38 Corridor Study	Units	U.S. Customary

## Segment 1

### Vehicle Inputs

Segment Type	Passing Zone	Length, ft	1084
Measured FFS	Measured	Free-Flow Speed, mi/h	55.0

### Demand and Capacity

Directional Demand Flow Rate, veh/h	585	Opposing Demand Flow Rate, veh/h	350
Peak Hour Factor	0.88	Total Trucks, %	2.16
Segment Capacity, veh/h	1700	Demand/Capacity (D/C)	0.34

### Intermediate Results

Segment Vertical Class	1	Free-Flow Speed, mi/h	55.0
Speed Slope Coefficient (m)	4.36618	Speed Power Coefficient (p)	0.50547
PF Slope Coefficient (m)	-1.35882	PF Power Coefficient (p)	0.76024
In Passing Lane Effective Length?	No	Total Segment Density, veh/mi/ln	6.7
%Improvement to Percent Followers	0.0	%Improvement to Speed	0.0

### Subsegment Data

#	Segment Type	Length, ft	Radius, ft	Superelevation, %	Average Speed, mi/h
1	Tangent	1084	-	-	52.0

### Vehicle Results

Average Speed, mi/h	52.0	Percent Followers, %	59.5
Segment Travel Time, minutes	0.24	Follower Density (FD), followers/mi/ln	6.7
Vehicle LOS	C		

### Bicycle Results

Percent Occupied Parking	0	Pavement Condition Rating	4
Flow Rate Outside Lane, veh/h	585	Bicycle Effective Width, ft	24
Bicycle LOS Score	2.94	Bicycle Effective Speed Factor	4.62
Bicycle LOS	C		

## Segment 2

### Vehicle Inputs

Segment Type	Passing Constrained	Length, ft	507
Measured FFS	Measured	Free-Flow Speed, mi/h	55.0

Demand and Capacity					
Directional Demand Flow Rate, veh/h		585	Opposing Demand Flow Rate, veh/h		-

# HCS Two-Lane Highway Report

## Project Information

Analyst	MJV	Date	5/11/2023
Agency	HRG	Analysis Year	2050 NB
Jurisdiction	SDDOT	Time Analyzed	PM Peak
Project Description	WB 38 West of Hartford	Units	U.S. Customary

## Segment 1

### Vehicle Inputs

Segment Type	Passing Zone	Length, ft	10549
Measured FFS	Measured	Free-Flow Speed, mi/h	70.0

### Demand and Capacity

Directional Demand Flow Rate, veh/h	280	Opposing Demand Flow Rate, veh/h	164
Peak Hour Factor	0.88	Total Trucks, %	1.94
Segment Capacity, veh/h	1700	Demand/Capacity (D/C)	0.16

### Intermediate Results

Segment Vertical Class	1	Free-Flow Speed, mi/h	70.0
Speed Slope Coefficient (m)	4.39885	Speed Power Coefficient (p)	0.55020
PF Slope Coefficient (m)	-1.15143	PF Power Coefficient (p)	0.81244
In Passing Lane Effective Length?	No	Total Segment Density, veh/mi/ln	1.4
%Improvement to Percent Followers	0.0	%Improvement to Speed	0.0

### Subsegment Data

#	Segment Type	Length, ft	Radius, ft	Superelevation, %	Average Speed, mi/h
1	Tangent	10549	-	-	68.3

### Vehicle Results

Average Speed, mi/h	68.3	Percent Followers, %	33.6
Segment Travel Time, minutes	1.76	Follower Density (FD), followers/mi/ln	1.4
Vehicle LOS	A		

### Bicycle Results

Percent Occupied Parking	0	Pavement Condition Rating	4
Flow Rate Outside Lane, veh/h	280	Bicycle Effective Width, ft	24
Bicycle LOS Score	2.64	Bicycle Effective Speed Factor	5.07
Bicycle LOS	C		

## Segment 2

### Vehicle Inputs

Segment Type	Passing Zone	Length, ft	2793
Measured FFS	Measured	Free-Flow Speed, mi/h	70.0

# INTRODUCTION

## PROJECT BACKGROUND

The area of interest for the study is the corridor of South Dakota Highway 38 (SD 38) from the east intersection with South Dakota Highway 19 (SD 19) in the Town of Humboldt (Humboldt) to Marion Road in Sioux Falls, Minnehaha County. The South Dakota Department of Transportation (SDDOT) has undertaken this Environmental Screening Report to develop a more thorough understanding of this corridor. The report shall evaluate the existing and projected future operating conditions and features of this corridor with the goal of identifying existing environmental conditions and anticipated problem areas. The results of this effort may ultimately be used to support a National Environmental Policy Act (NEPA) decision and final design.

This Environmental Screening Report identifies environmental resources and environmentally sensitive areas and is composed of readily available data and limited field survey information. The purpose of this screening report is to identify resources early in the planning process to avoid fatal flaws and to consider sensitive environmental resources. The intent of this screening report is not to identify impacts but rather to identify potential resource areas for use in an alternatives analysis to avoid and minimize impacts to resources. As each identified transportation improvement progresses to a specific project, this process can be used to develop alternatives that meet the purpose and need. If a recommended improvement receives funding, the results of the Environmental Screening Report will be carried forward at that time into project development, additional environmental review (NEPA-level or similar local environmental review process), design, and ultimately construction, maintenance, and operations.

The previous planning studies or information that are relevant to the project are noted below in chronological order:

- In 2015, **Sioux Falls Metropolitan Planning Organization (MPO) Bicycle Plan** was completed to consider bike route connections between county roads and the Sioux Falls Metro Area Cities, which includes Brandon, Crooks, Harrisburg, Hartford, Sioux Falls, and Tea.
- In 2015, Minnehaha County adopted the **Envision 2035 Comprehensive Plan** for the purpose of protecting and guiding the physical, social, economic, and environmental development of the county; to protect the tax base; to encourage a distribution of population or mode of land utilization that will facilitate the economical and adequate provisions of transportation, roads, water supply, drainage, sanitation, education, recreation, or other public requirements to lessen governmental expenditure; and to conserve and develop natural resources.
- In 2016, the **Shape Sioux Falls 2040 Comprehensive Plan** was adopted. Updates to this comprehensive plan were completed in 2019 and 2022 to accommodate maps for development areas, sanitary availability, water and roads, drainage and future land uses.
- In 2017, the **Hartford Comprehensive Plan 2017-2037** was completed to accomplish two primary purposes. One to address the planning requirements of state law while also providing a sound and logical basis for city growth and management strategies. Two, to provide some predictability about the potential land uses and timing of development so that both public and private sectors can make informed decisions in the area of real estate and capital investments.
- In 2003, the **Humboldt Comprehensive Plan 2003 – 2025** was completed to accomplish three main goals. The goals with more specific objectives include to ensure the health and safety of citizens, protect natural resources, and enhance the visual quality of the community.
- In 2020, the **Go Sioux Falls Long Range Transportation Plan** was completed to guide transportation planning activities and strategies to shape the greater Sioux Falls region's transportation network.
- Ongoing is the **South Dakota Department of Transportation Pavement Management System** which identified these corridors as needing maintenance.

## PROJECT LOCATION

The study focuses on a 14.2-mile stretch of SD 38, an east/west two-lane, rural principal arterial highway. The Project Study Area is in Minnehaha County and extends from the east intersection with SD 19 in Humboldt to Marion Road in Sioux Falls. The SD 38 corridor is shown in **Figure 1**.

The Project Study Area begins at the eastern city limits of Humboldt and continues east through a predominately rural agricultural area with scattered rural residences and farmsteads until reaching the City of Hartford (Hartford). The reach of SD 38 through Hartford is urbanized, with numerous businesses, residences, and intersecting city streets present. The Central Valley Golf Course, West Central High School, and the Hartford Cemetery are also located adjacent to SD 38 within the Hartford city limits. An unnamed tributary of Skunk Creek meanders adjacent to the south side of SD 38 beginning southeast of the intersection of SD 38 and 464<sup>th</sup> Avenue/Railroad Street in Hartford, eventually connecting to Skunk Creek northwest of the SD 38 and 466<sup>th</sup> Avenue intersection. East of Hartford, the SD 38 alignment is to the southeast, eventually crossing the Interstate 90 (I-90) corridor at Exit 390 and continuing to the east until reaching Marion Road in Sioux Falls. Between Hartford and Sioux Falls, four smaller residential developments exist: Songbird Acres, Hartford Heights, Maple Pass, and Shatter's Fourth Addition. Aside from these residential developments, the Project Study Area east of Hartford to Sioux Falls is predominately agricultural, with scattered rural residential homes and commercial and industrial businesses. SD 38 crosses the main channel of Skunk Creek approximately 0.5-mile east of the intersection with I-90 and crosses two unnamed tributaries and the main channel of Willow Creek on the eastern end of the Project Study Area. The study segment of SD 38 is predominantly a rural two-lane highway. The vertical profile of the roadway is flat with some rolling terrain, primarily associated with stream drainages. There are a total of eighteen study intersections reviewed as part of the existing conditions assessment, including seventeen stop-controlled intersections and one traffic signal-controlled intersection. Refer to **Table 1**.

**Table 1. SD 38 Study Intersections**

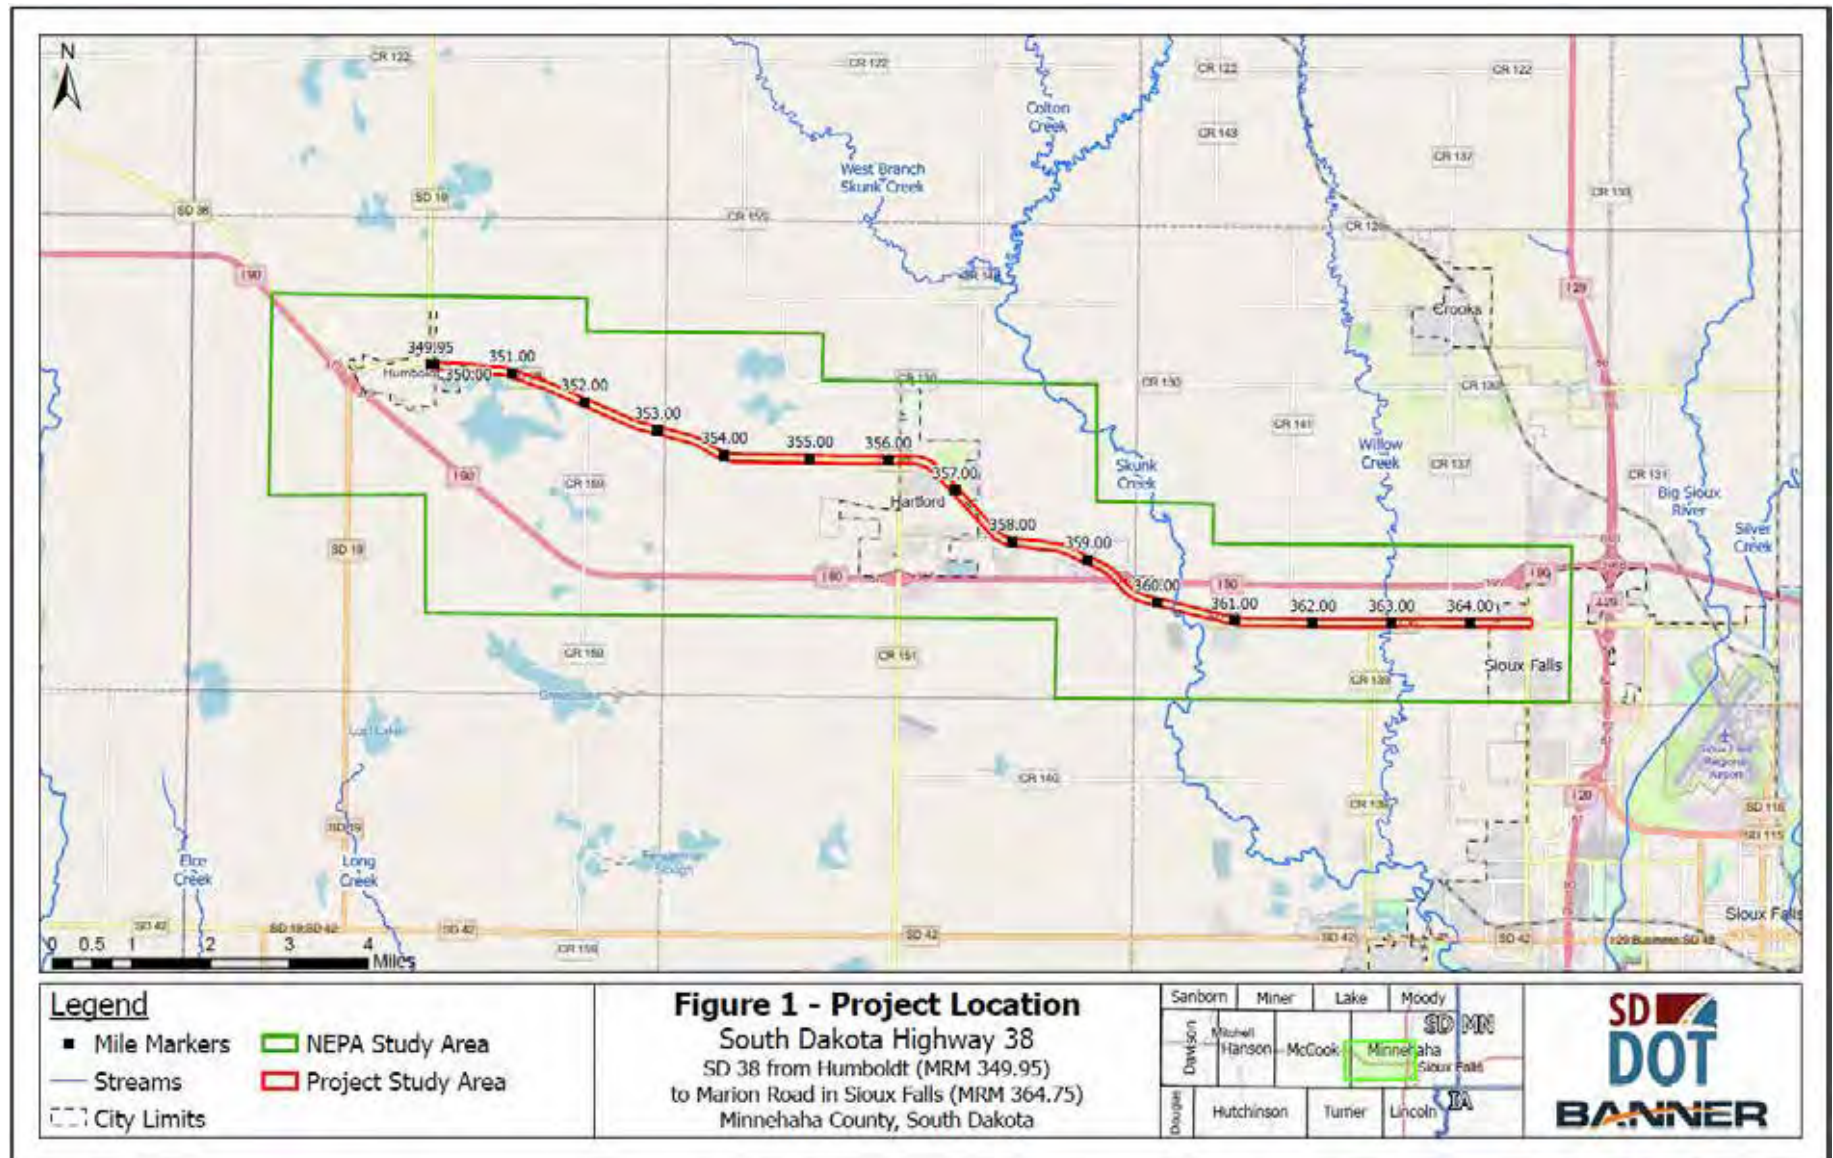

Main Line	Cross Street(s)
SD 38	SD 19 / 457 <sup>th</sup> Avenue

	I-90 Speedway Entrance
	Western Avenue / 463 <sup>rd</sup> Avenue
	Main Avenue
	Vandemark Avenue
	2 <sup>nd</sup> Street
	West Central High School Entrance
	Railroad Street / 464 <sup>th</sup> Avenue
	Mickelson Road / 260 <sup>th</sup> Street
	466 <sup>h</sup> Avenue (North)
	Westbound I-90 Exit 390
	Eastbound I-90 Exit 390
	466 <sup>th</sup> Avenue (South)
	County Highway 141 / 468 <sup>th</sup> Avenue
	County Highway 139 / 469 <sup>th</sup> Avenue
	La Mesa Drive / 470 <sup>th</sup> Avenue
	Marion Road

SD 38 is in a rapidly developing area and serves as a viable alternate route to I-90. Development pressure is expected to impact the SD 38 corridor with higher traffic volumes, greater demand for multi-modal (bike and pedestrian) uses, and additional access management concerns (HR Green 2023a). The eastern portion of the corridor is located within the MPO urban boundary and the growth area of the cities of Sioux Falls, Hartford, and Humboldt. Refer to **Figure 1**.

Two study areas, the NEPA Study Area and the Project Study Area, will be utilized in this screening report to analyze the indirect, direct, and cumulative effects of the proposed transportation improvements. The NEPA Study Area is larger than the Project Study Area and is utilized to analyze the indirect and cumulative effects for resources that extend geographically and are not specifically located within the Project Study Area. The Project Study Area analyzes the direct and indirect effects, allowing for a more specific look at resources such as wetlands or unique habitats that could be potentially affected. The Project Study Area is a 500-foot-wide corridor, 250 feet on either side of the centerline of SD 38. The Project Study Area is specifically utilized for indirect and direct impact analysis.

To determine the boundaries of the NEPA Study Area, traffic data, communities, resource extents, and the needs of the corridor were taken into consideration. The western boundary of the corridor was Humboldt, taking into consideration the connectivity of SD 38 to I-90. The eastern boundary incorporates the connection of SD 38 into Sioux Falls. The northern boundary includes the current and future city limit extents of Hartford and Humboldt. The southern boundary includes the extensions of the two I-90 interchanges and SD 38 entering Sioux Falls. Refer to **Figure 1**.

Figure 1. Project Location

# PRELIMINARY NEEDS, PURPOSE, AND GOALS/OBJECTIVES

The Study Advisory Team, composed of FHWA, SDDOT, Minnehaha County, Humboldt, Hartford, Sioux Falls, and the Sioux Falls Metropolitan Planning Organization (MPO), is examining the need for transportation improvements along SD 38 from its intersection with SD 19 to Marion Road.

The logical termini of this study are the east intersection of SD 38 with SD 19 in Humboldt and the intersection of SD 38 with Marion Road in Sioux Falls. This Environmental Screening Report is focused on a corridor level of analysis. Although the needs identified are for the corridor, the needs can be utilized for specific transportation projects identified from this study. The sections below discuss each need that was identified further.

The overall extents of the Project Study Area are from the intersection of SD 38 with SD 19 to the intersection of SD 38 with Marion Road. Within this overall extent, four distinct segments were identified, creating logical termini for future projects. Refer to **Figure 2** in **Appendix A** for corridor segments.

- Segment 1 extends from SD 19 to the western city limit boundary of Hartford. This is a rural segment utilized primarily by through traffic, commuting residents, and agricultural equipment. The through traffic utilizes this segment to travel between Humboldt and Hartford and to continue east or west on SD 38.
- Segment 2 extends from the western city limit boundary of Hartford to the I-90 interchange. Within Hartford, this is an urban segment with many businesses adjacent to the roadway. On the west side of Hartford, traffic transitions from a rural to urban roadway section. This segment also contains the growth area of Hartford, including the key intersections with East 2<sup>nd</sup> Street and Mickelson Road/260<sup>th</sup> Street. East 2<sup>nd</sup> Street provides access to West Central Elementary School. The West Central High School parking lot is accessed directly off SD 38 to the southeast of East 2<sup>nd</sup> Street. Students living in the residential area on the north side of SD 38 cross at this location to attend the elementary or high school. Mickelson Road is a main collector road that runs east to west on the south side of Hartford. Residential areas also have direct or indirect access to SD 38 along this segment. East of Hartford, SD 38 traverses through agricultural areas, two subdivision areas, idle ground, and wetlands associated with an unnamed tributary of Skunk Creek. This segment continues to the I-90 Exit 390 interchange.
- Segment 3 is the I-90 interchange. The interchange is currently a folded diamond configuration. The new Hartford wastewater facility is being constructed within this segment, west of the interchange and south of SD 38.
- Segment 4 extends from the I-90 interchange to Marion Road. This segment is primarily rural with agricultural uses. There is a residential subdivision southeast of the intersection of 467<sup>th</sup> Avenue and SD 38. Industrial and commercial businesses exist on the east end of the segment adjacent to Marion Road. Segment 4 ends at the intersection of SD 38 and Marion Road.

## SAFETY

To consider safety within the Project Study Area, SDDOT provided historical crash data for the Project Study Area that were reviewed for the eighteen study intersections to determine current crash trends and/or concerns. A crash summary was completed by HR Green in March of 2023. Crashes occurred within the intersection area of influence and outside those areas within the SD 38 corridor. Crashes were analyzed for the five-year period between 2018 to 2022 (HR Green 2023a).

A total of 171 crashes occurred within the Project Study Area. Of these incidents, there were 4 fatal

incidents (2%), 37 injury incidents (22%), and 130 property damage only incidents (76%). Refer to **Graphic 1**. A majority of the crashes were classified as non-collision incidents (57%), followed by rear-end (20%) and angle incidents (15%). Refer to **Graphic 2**. The SD 38 corridor contained 123 (72%) crash incidents and the intersection areas of influence contained 48 (28%) crash incidents (HR Green 2023a). Refer to **Graphic 3**.

SD 38 and Marion Road intersection had the highest rate of crash frequency, totaling 14 (30%) of the intersection crash instances. SD 38 east of Hartford had the highest frequency of corridor crashes with 57 (46%) of the total corridor segment crash instances. The main contributing circumstances to fatal and injury crash incidents due to a driver included drinking (20%), failure to yield vehicle (17%), disregard of traffic signs or signals (13%), or some form of roadway/lane departure (20%) (HR Green 2023a).

The crash history was reviewed, and the SD 38 corridor had a weighted crash rate of 3.45. This is higher than the statewide average crash rate of 1.73 for rural minor arterials. Many crashes were the result of vehicle-animal strikes with 63 (51%) instances reported. Most intersections had lower observed crash frequency than the predicted crash frequency (HR Green 2023a). However, the intersections of SD 38 with SD 19 and Marion Road had an average five-year crash frequency that was above the predicted crash frequency.

Predictive crash analysis was completed using the Interactive Highway Safety Design Model (IHSDM) Crash Prediction analysis tool to evaluate the safety effects and predict the expected change in crashes between design year scenarios. Future year 2050 traffic forecasts utilized traffic data supplied by the Sioux Falls Metropolitan Planning Organization (SFMPPO) and the SDDOT (HR Green 2023b). A predictive safety analysis of the SD 38 Project Study Area was completed for the design year 2050 No-Build scenario (HR Green 2023b). Along the SD 38 segments, there were a several intersections and highway segments that produced a high number of crash incidents that indicated a need for potential safety improvements (HR Green 2023b).

The traffic safety analysis indicated that the following intersections and highway segments should be investigated for future safety improvements:

- SD 38 & Western Avenue/463<sup>rd</sup> Avenue,
- SD 38 & Main Avenue,
- SD 38 & 2<sup>nd</sup> Street,
- SD 38 & Railroad Street/464<sup>th</sup> Avenue,
- SD 38 & Mickelson Road/260<sup>th</sup> Street,
- SD 38 & Marion Road,
- SD 38 segment between 459<sup>th</sup> Street and Western Avenue/463<sup>rd</sup> Avenue,
- SD 38 segment between Mickelson Road/260<sup>th</sup> Street and 466<sup>th</sup> Avenue (North), and
- SD 38 segment between 466<sup>th</sup> Avenue (South) and La Mesa Drive/470<sup>th</sup> Avenue.

## TRAFFIC CAPACITY

### Existing Conditions

The SD 38 Corridor Study, Existing Traffic and Operations Analysis included an assessment of existing traffic volume data at eighteen intersections along the Project Study Area. Traffic volume data were collected on November 2, 2022, for a 12-hour period (7:00 AM to 7:00 PM) (HR Green 2023a). A review of the traffic volume data revealed distinct AM and PM peak hour periods occurring between 7:15 to 8:15 AM and 4:45 to 5:45 PM.

Intersection Level of Service (LOS) is primarily a function of peak hour turning movement volumes, intersection lane configuration, and traffic control. For intersection analysis, the Highway Capacity Manual (HCM) defines LOS in terms of the average control delay at the intersection in seconds per vehicle. Two-lane highway LOS is primarily a function of the roadway configuration, vehicle speeds, and availability of passing opportunities. For two-lane highway analysis, the HCM defines LOS in terms of the following density or the number of vehicles in a follower state per mile per lane. The results of a HCM analysis are typically presented in the form of a letter grade (A-F) that provides a qualitative estimate of the operational efficiency or effectiveness of the corridor. Much like an academic report card, LOS A represents the best range of operating conditions (i.e., motorists experiencing little delay or congestion) and LOS F represents the worst (i.e., extreme delay or severe congestion). The study utilized Level of Service (LOS) to categorize traffic flow, generally during peak (work congestion) traffic periods. Refer to **Graphic 4**.

GRAPHIC 4. Level of Service

Following SDDOT guidance, LOS C is the desired minimum traffic operational goal for intersections in rural environments while LOS D is an acceptable operational goal for intersections in dense urban environments. Under the existing conditions, the traffic operations analysis showed acceptable operations at all intersections within the Project Study Area, with intersections achieving LOS B or greater during both AM and PM peak hours. The exception was the SD 38 and La Mesa Drive/470<sup>th</sup> Avenue intersection which produced a LOS C during PM Peak Hour (HR Green 2023a).

Under the existing conditions, the traffic operations analysis showed acceptable operations along the corridors within the Project Study Area, with many segments achieving LOS B or greater during both the AM and PM peak hours. The exception was an approximately 960-foot segment of westbound SD 38 located west of Mickelson Road / 260<sup>th</sup> Street which produced a LOS C during the PM peak hour (HR Green 2023a).

In general, the existing condition traffic operations demonstrated acceptable performance measures throughout all intersections and highway segments within the Project Study Area. The desired LOS was realized for all intersections and highway segments during the AM and PM peak hours (HR Green 2023a).

## Future Conditions

In order to evaluate the future traffic conditions, the 2050 ADT volumes were collected from the SFMPO

Traffic Demand Model (TDM). These forecasted volumes accounted for localized traffic growth, changes in traffic patterns, and planned roadway improvements. To determine the traffic growth within the study area and estimate 2050 peak hour volumes, the 2018 base year ADT was referenced from the TDM. Additionally, the future ADT was acquired from available SDDOT GIS data to account for portions of SD 38 that were outside of the TDM boundaries. Available development site plans were sourced and any planned development trips that have not been included in the TDM were incorporated into the future year forecasted volumes.

The initial year of 2029 was analyzed for future conditions. **Table 2** shows the results of the future traffic conditions analysis for 2029.

**Table 2. Traffic Intersection Operations for Initial Year 2029**

ID #	SD 38 Cross Street(s)	AM PEAK HOUR		PM PEAK HOUR	
		Delay	LOS	Delay	LOS
1	SD 19 / 457th Avenue	10.4	B	10.5	B
2	459 <sup>th</sup> Avenue	10.4	B	11.8	B
3	I-90 Speedway Entrance	0.0	A	0.0	A
4	Western Avenue / 463rd Avenue	13.5	B	16.5	C
5	Main Avenue	12.0	B	15.2	C
6	Vandemark Avenue	12.6	B	12.7	B
7	2nd Street	16.6	C	18.5	C
8	West Central High School Entrance	13.5	B	13.2	B
9	Railroad Street / 464th Avenue	18.2	C	19.8	C
10	Mickelson Road / 260th Street	24.8	C	54.5	F
11	466th Avenue (North)	19.5	C	20.3	C
12	Westbound (WB) I-90 Exit 390	11.5	B	17.7	C
13	Eastbound (EB) I-90 Exit 390	12.3	B	15.4	C
14	466th Avenue (South)	11.9	B	12.3	B
15	County 141 / 468th Avenue	13.5	B	14.5	B
16	County 139 / 469th Avenue	14.2	B	18.5	C
17	La Mesa Drive / 470th Avenue	17.0	C	21.7	C
18	Marion Road	16.2	B	20.6	C

Under the 2029 conditions, the traffic operations analysis showed acceptable operations at the majority of intersections within the Project Study Area, with intersections achieving LOS C or greater during both the AM and PM peak hours. The SD38 and Mickelson Road/260<sup>th</sup> Street intersection received a LOS F during PM peak hour which can be attributed to the additional development traffic at this intersection.

Interim year 2040 traffic operations analysis used future year traffic volumes and posted travel volumes and posted travel speeds. The SD 38 and Mickelson Road/260<sup>th</sup> Street Intersection was analyzed under traffic signal control. The results of the interim year 2040 intersection capacity analysis can be viewed in **Table 3**.

**Table 3. Traffic Intersection Operations for Interim Year 2040**

ID #	SD 38 Cross Street(s)	AM PEAK HOUR		PM PEAK HOUR	
		Delay	LOS	Delay	LOS
1	SD Highway 19 / 457th Avenue	11.1	B	11.2	B
2	459 <sup>th</sup> Avenue	10.9	B	12.4	B
3	I-90 Speedway Entrance	0.0	A	0.0	A
4	Western Avenue / 463rd Avenue	15.9	C	23.2	C
5	Main Avenue	13.1	B	19.0	C
6	Vandemark Avenue	13.6	B	14.6	B
7	2nd Street	21.2	C	25.6	D
8	West Central High School Entrance	13.5	B	13.2	B
9	Railroad Street / 464th Avenue	25.5	D	26.4	D
10	Mickelson Road / 260th Street	30.1	C	29.6	C
11	466th Avenue (North)	24.6	C	25.0	C
12	WB I-90 Exit 390	13.1	B	27.0	D
13	EB I-90 Exit 390	14.4	B	21.1	C
14	466th Avenue (South)	12.6	B	13.6	B
15	County Highway 141 / 468th Avenue	14.8	B	17.2	C
16	County Highway 139 / 469th Avenue	18.4	C	31.4	D
17	La Mesa Drive / 470th Avenue	23.3	C	33.0	D
18	Marion Road	17.2	B	26.5	C

Under the interim year 2040 conditions, the traffic operations analysis showed acceptable operations at the majority of the intersections within the Study Area, within the intersections achieving LOS C or greater during both the AM and PM peak hours. The five study intersections of SD 38 with 2<sup>nd</sup> Street, Railroad Street/464<sup>th</sup> Avenue, WB I-90, County 139/469<sup>th</sup> Avenue, and La Mesa Drive/470<sup>th</sup> Avenue produced an LOS D in at least one peak hour, which does not meet the LOS goal established by SDDOT.

The highway segments were also analyzed and met the LOS goals throughout the Study Area for all peak hours.

Design Year 2050 traffic operations analysis used future year traffic volumes and posted travel speeds. The SD 38 and Mickelson Road/260<sup>th</sup> Street intersection was analysed under traffic signal control. The results of the Design Year 2050 intersection capacity analysis can be viewed in **Table 4**.

**Table 4. Traffic Intersection Operations for Interim Year 2050**

ID #	SD 38 Cross Street(s)	AM PEAK HOUR		PM PEAK HOUR	
		Delay	LOS	Delay	LOS
1	SD Highway 19 / 457th Avenue	12.2	B	12.3	B
2	459 <sup>th</sup> Avenue	11.6	B	13.5	B
3	I-90 Speedway Entrance	0.0	A	0.0	A
4	Western Avenue / 463rd Avenue	21.5	C	46.5	E
5	Main Avenue	14.4	B	25.5	D
6	Vandemark Avenue	15.4	C	16.8	C
7	2nd Street	31.1	D	38.3	E
8	West Central High School Entrance	15.4	C	14.8	B
9	Railroad Street / 464th Avenue	41.9	E	43.8	E
10	Mickelson Road / 260th Street	19.2	B	21.3	C
11	466th Avenue (North)	31.6	D	31.4	D
12	WB I-90 Exit 390	14.9	B	66.1	F
13	EB I-90 Exit 390	18.4	C	30.0	D
14	466th Avenue (South)	13.9	B	15.7	C
15	County Highway 141 / 468th Avenue	16.7	C	21.3	C
16	County Highway 139 / 469th Avenue	30.9	D	106.2	F
17	La Mesa Drive / 470th Avenue	39.2	E	81.5	F
18	Marion Road	19.1	B	32.1	C

Under the Design Year 2050 conditions, the traffic operations analysis showed potential capacity constraints and inefficiencies at many intersections within the study area. Nine study intersections of SD 38, including Western Avenue/463<sup>rd</sup> Avenue, Main Avenue, 2<sup>nd</sup> Street, Railroad Street/464<sup>th</sup> Avenue, 466<sup>th</sup> Avenue (North), WB I-90, EB I-90, County 139/469<sup>th</sup> Avenue, and La Mesa Drive/470<sup>th</sup> Avenue, produced an LOS D or worse during at least one peak hour, which does not meet the LOS goal established by the SDDOT.

The results of the highway segment capacity analysis are shown in **Tables 5 and 6**.

**Table 5. Traffic Highway Operations for Design Year 2050, Eastbound SD 38**

ID #	Segment Type	AM PEAK HOUR		PM PEAK HOUR	
		Density	LOS	Density	LOS
SD 38 Eastbound					
EB 18	Passing Zone	8.1	D	3.3	B
EB 19	Passing Constrained	7.9	C	3.1	B
EB 20	Passing Constrained	8.3	D	3.4	B
EB 21	Passing Constrained	9.2	D	4.2	C
EB 33	Passing Constrained	8.2	D	2.9	B

**Table 6. Traffic Highway Operations for Design Year 2050, Westbound SD 38**

ID #	Segment Type	AM PEAK HOUR		PM PEAK HOUR	
		Density	LOS	Density	LOS
SD 38 Westbound					
WB 1	Passing Constrained	1.6	A	8.7	D
WB 2	Passing Zone	1.5	A	8.5	D
WB 16	Passing Constrained	3.3	B	10.9	D
WB 17	Passing Constrained	3.0	B	10.5	D
WB 18	Passing Constrained	3.2	B	10.8	D
WB 19	Passing Zone	3.1	B	10.7	D
WB 20	Passing Constrained	3.2	B	10.8	D
WB 21	Passing Constrained	3.3	B	8.7	D

Under the Design Year 2050 conditions, the traffic operations analysis showed potential capacity constraints at the segments noted in the above tables. There were four eastbound segments and eight westbound segments that resulted in LOS D during at least one of the peak hours. The segments represent areas of focus for potential capacity improvements.

Overall, the Design Year 2050 condition traffic operations demonstrated the areas within the study limits that could benefit most from potential improvements. The desired LOS was realized for the majority of intersections and highway segments during the AM and PM peak hours but there were notable exceptions that did not meet the LOS criteria goals. The recognition of issues at these locations will be used to guide future concepts.

To determine if the proposed alternatives would meet the need for traffic capacity, the following is the criterion that will be used:

- Does the alternative reduce the number of crashes in the SD 38 corridor?
- Does the alternative maintain or improve the intersections of SD 38 to an acceptable LOS level by the planning year noted?
- Does the alternative maintain or improve the eastbound and westbound traffic of SD 38 to an acceptable LOS level by the planning year noted?
- Does the alternative maintain or improve the I-90 Exit 390 Interchange to an acceptable LOS level by the planning year noted?

# SUMMARY OF PURPOSE AND NEED FOR THE CORRIDOR STUDY

The Project Study Area of SD 38 is predominantly a rural two-lane highway located in a rapidly developing area that serves as a viable alternate route to I-90. Development pressure is expected to impact the SD 38 corridor with higher traffic volumes, greater demand for multi-modal (bike and pedestrian) uses, and additional access management concerns. In addition, segments of the SD 38 corridor are expected to need major rehabilitation or reconstruction within the next 10 to 15 years. The primary purpose of the corridor study is to identify existing environmental conditions and anticipated problem areas for future construction activities that will reconstruct the roadway to meet future traffic volume demands.

## RANGE OF ALTERNATIVES

Five alternatives, including a no-build alternative, were identified to address the needs along the Project corridor. Three of the five alternatives include improvements to the SD 38 mainline corridor and one of the five alternatives provides multiple options that could occur at the I-90 Exit 390 Interchange over SD 38.

- **No-Build Alternative**
- **Alternative 1 – Mainline Corridor Improvements**
  - Humboldt to Hartford: 2 lanes with turn lanes as needed
  - Hartford to Railroad Street: 3 lanes
  - Railroad Street to I-90: 5 lanes
  - I-90 to Tea/Ellis Road (469<sup>th</sup> St): 2 lanes
  - Tea/Ellis Road (469<sup>th</sup> St) to Sioux Falls: 5 lanes
- **Alternative 2 – Mainline Corridor Improvements**
  - Humboldt to Hartford: 2 lanes with turn lanes as needed
  - Hartford to Railroad Street: 3 lanes
  - Railroad Street to I-90: 5 lanes
  - I-90 to Sioux Falls: 4 lanes with raised median
- **Alternative 3 – Mainline Corridor Improvements**
  - Humboldt to Hartford: 2 lanes with turn lanes as needed
  - Hartford to Railroad Street: 3 lanes
  - Railroad Street to Sioux Falls: 4 lanes with raised median
- **I-90 Exit 390 Interchange Options**
  - Option 1: Folded Diamond - match existing SD 38 Alignment
  - Option 2: Folded Diamond – 65 Degree Skew (50 mph - SD 38)
  - Option 3: Folded Diamond – 75 Degree Skew (50 mph – SD 38)
  - Option 3.2: Folded Diamond – 75 Degree Skew (50 mph – SD 38)
  - Option 4:  $\frac{3}{4}$  Standard Diamond
  - Option 5: Standard Diamond Interchange
  - Option 6a: Folded Diamond Interchange with Roundabouts – 75 Degree Skew
  - Option 6b: Folded Diamond Interchange with Roundabouts – Existing Alignment
  - Option 7: Standard Diamond Interchange – Shifted East
  - Option 8: Single Point Urban Interchange (SPUI)
  - Option 9: Diverging Diamond Interchange (DDI)
  - Option 10: Tight Urban Diamond Interchange

A screening process was completed that focused on the purpose and need criterion. The purpose and need screening criterion were the following:

- Does the alternative reduce the number of crashes in the SD 38 corridor?
- Does the alternative maintain or improve the intersections of SD 38 to an acceptable LOS level by the planning year noted?
- Does the alternative maintain or improve the eastbound and westbound traffic of SD 38 to an acceptable LOS level by the planning year noted?
- Does the alternative maintain or improve the I-90 Exit 390 Interchange to an acceptable LOS level by the planning year noted?

## No Build Alternative

The No Build Alternative includes only maintenance activities for the current SD 38 corridor. No improvements along the SD 38 mainline corridor or to the I-90 Exit 390 Interchange would occur. Additionally, improvements through Hartford, Humboldt, and Sioux Falls would not occur. The No Build Alternative would not meet the needs (traffic capacity and safety, and roadway condition) identified for the study.

*Although the No Build Alternative does not meet the design criteria or the purpose and need, it will be carried forward as a baseline for comparing potential impacts of the build alternatives.*

Alternatives that do not meet the preliminary purpose and need screening criterion have been discarded from further consideration and include Alternative 1 and Alternative 2. Alternative 1 and Alternative 2 are briefly discussed below; no figures for these alternatives have been included in this document.

## Alternative 1 – Mainline Corridor Improvements

Improvements are proposed at the intersections of SD 19/457<sup>th</sup> Avenue, 258<sup>th</sup> Street, 459<sup>th</sup> Avenue, 460<sup>th</sup> Avenue, the I-90 Speedway entrance, 259<sup>th</sup> Street, 461<sup>st</sup> Avenue, 462<sup>nd</sup> Avenue, Western Avenue/463<sup>rd</sup> Avenue, Oaks Avenue, N Main Avenue, Mundt Avenue/9<sup>th</sup> Street, N Vandemark Avenue, Elm Road, East 2<sup>nd</sup> Street, West Central High School Entrance, Railroad Street/464<sup>th</sup> Avenue, 260<sup>th</sup> Street/N Maple Avenue, 456<sup>th</sup> Avenue, Kloxin Drive, Middle Drive, Boggs Circle, 466<sup>th</sup> Avenue, 467<sup>th</sup> Avenue, 261<sup>st</sup> Street, Dorothy Drive, County Highway 141/468<sup>th</sup> Avenue, Pheasant Run Avenue, County Highway 139/469<sup>th</sup> Avenue, and La Mesa Drive/ 470<sup>th</sup> Avenue. The intersection improvements include either signage for turning movements, stoplights, turn lanes, access reconfigurations that allow for more perpendicular entrances onto SD 38, or a combination thereof.

Mainline corridor improvements under Alternative 1 are divided into five separate segments along the corridor, Humboldt to Hartford, Hartford to Railroad Street, Railroad Street to I-90, I-90 to Tea/Ellis Road (469<sup>th</sup> Street), and Tea/Ellis Road (469<sup>th</sup> Street) to Sioux Falls. The Alternative 1 mainline corridor improvement from Humboldt to Hartford includes two lanes with turn lanes as needed. From Hartford to Railroad Street, improvements include a three-lane configuration with a center turn lane. East of Railroad Street, SD 38 transitions to a five-lane configuration to the I-90 intersection. Improvements from I-90 to Tea/Ellis Road (469<sup>th</sup> Street) include a two-lane configuration up to the Tea/Ellis Road (469<sup>th</sup> Street). From the Tea/Ellis Road (469<sup>th</sup> Street), SD 38 would transition to a five-lane configuration with a center turn lane.

Other improvements under Alternative 1 not associated with a roadway intersection include, but are not limited to, modification of roadway field approaches and residential approaches as needed, the addition

of lanes for through traffic, and the addition of turn lanes for entering onto and exiting from SD 38. Additionally, realignment will occur to the pedestrian path along the north side of SD 38 east of Hartford.

An additional option for Alternative 1 includes an improvement to the I-90 Speedway entrance. The entrance for the I-90 Speedway would be located approximately 500 feet east of the original entrance to allow for a more perpendicular entrance onto SD 38. The improvement would include east bound and west bound turn lanes to exit SD 38 onto the I-90 Speedway Entrance.

Due to Alternative 1 being eliminated from consideration, figures for Alternative 1 were not included in this document.

*Alternative 1 has been eliminated from further consideration due to inconsistency in roadway section (5-lane to a 2-lane east of I-90, then back to a 5-lane from Tea/Ellis Road to Marion Road), driver expectancy concerns, and a reduction/lack of access control without a raised median within the rapidly growing areas of Hartford and Sioux Falls.*

## Alternative 2 – Mainline Corridor Improvements

Improvements are proposed at the intersections of SD 19/457<sup>th</sup> Avenue, 258<sup>th</sup> Street, 459<sup>th</sup> Avenue, 460<sup>th</sup> Avenue, the I-90 Speedway entrance, 259<sup>th</sup> Street, 461<sup>st</sup> Avenue, 462<sup>nd</sup> Avenue, Western Avenue/463<sup>rd</sup> Avenue, Oaks Avenue, N Main Avenue, Mundt Avenue/9<sup>th</sup> Street, N Vandemark Avenue, Elm Road, East 2<sup>nd</sup> Street, West Central High School Entrance, Railroad Street/464<sup>th</sup> Avenue, 260<sup>th</sup> Street/N Maple Avenue, 456<sup>th</sup> Avenue, Kloxin Drive, Middle Drive, Boggs Circle, 466<sup>th</sup> Avenue, 467<sup>th</sup> Avenue, 261<sup>st</sup> Street, Dorothy Drive, County Highway 141/468<sup>th</sup> Avenue, Pheasant Run Avenue, County Highway 139/469<sup>th</sup> Avenue, and La Mesa Drive/ 470<sup>th</sup> Avenue. The intersection improvements include either signage for turning movements, stoplights, turn lanes, reconfigurations that allow for more perpendicular entrances onto SD 38, or a combination thereof.

Mainline corridor improvements under Alternative 2 are divided into four separate segments along the corridor, Humboldt to Hartford, Hartford to Railroad Street, Railroad Street to I-90, and I-90 to Sioux Falls. The Alternative 2 mainline corridor improvement from Humboldt to Hartford includes a two-lane configuration with turn lanes as needed. From Hartford to Railroad Street, improvements include a three-lane configuration, including a center turn lane. East of Railroad Street to I-90 includes a five-lane configuration with a center turn lane. From east of I-90 to Sioux Falls, improvements include a four-lane configuration with a raised median.

Other improvements under Alternative 2 not associated with a roadway intersection include, but are not limited to, modification of roadway field approaches and residential approaches as needed, the addition of lanes for through traffic, and the addition of turn lanes for entering onto and exiting from SD 38. Additionally, realignment will occur to the pedestrian path along the north side of SD 38 east of Hartford.

An additional option for Alternative 2 includes an improvement to the I-90 Speedway entrance. The entrance for the I-90 Speedway would be located approximately 500 feet east of the original entrance to allow for a more perpendicular entrance onto SD 38. The improvement would include east bound and west bound turn lanes to exit SD 38 onto the I-90 Speedway Entrance.

Due to Alternative 2 being eliminated from consideration, figures for Alternative 2 were not included in this document.

*Alternative 2 has been eliminated from further consideration due to reduced/lack of access control*

*without a raised median within the rapidly growing Hartford area.*

Alternative 3 meets the screening criterion and is further discussed below.

## Alternative 3 – Mainline Corridor Improvements

Improvements are proposed at the intersections of SD 19/457<sup>th</sup> Avenue, 258<sup>th</sup> Street, 459<sup>th</sup> Avenue, 460<sup>th</sup> Avenue, the I-90 Speedway entrance, 259<sup>th</sup> Street, 461<sup>st</sup> Avenue, 462<sup>nd</sup> Avenue, Western Avenue/463<sup>rd</sup> Avenue, Oaks Avenue, N Main Avenue, Mundt Avenue/9<sup>th</sup> Street, N Vandemark Avenue, Elm Road, East 2<sup>nd</sup> Street, West Central High School Entrance, Railroad Street/464<sup>th</sup> Avenue, 260<sup>th</sup> Street/N Maple Avenue, 456<sup>th</sup> Avenue, Kloxin Drive, Middle Drive, Boggs Circle, 466<sup>th</sup> Avenue, 467<sup>th</sup> Avenue, 261<sup>st</sup> Street, Dorothy Drive, County Highway 141/468<sup>th</sup> Avenue, Pheasant Run Avenue, County Highway 139/469<sup>th</sup> Avenue, and La Mesa Drive/ 470<sup>th</sup> Avenue. The intersection improvements include either signage for turning movements, stoplights, turn lanes, reconfigurations that allow for more perpendicular entrances onto SD 38, or a combination thereof. Refer to **Figure 3 in Appendix A** for Alternative 3 Mainline Corridor Improvements.

Mainline corridor improvements under Alternative 3 are divided into three separate segments, Humboldt to Hartford, Hartford to Railroad Street, and Railroad Street to Sioux Falls. The Alternative 3 mainline corridor improvement from Humboldt to Hartford includes a two-lane configuration with turn lanes as needed. From Hartford to Railroad Street, improvements include a three-lane configuration including a center turn lane. From east of Railroad Street to Sioux Falls, improvements include a four-lane with a raised median which is consistent with the City of Sioux Falls design standard.

Other improvements under Alternative 3 not associated with a roadway intersection include, but are not limited to, modification of roadway field approaches and residential approaches as needed, the addition of lanes for through traffic, and the addition of turn lanes for entering onto and exiting from SD 38. Additionally, realignment will occur to the pedestrian path along the north side of SD 38 east of Hartford.

An additional option for Alternative 3 includes an improvement to the I-90 Speedway entrance. The entrance for the I-90 Speedway would be located approximately 500 feet east of the original entrance to allow for a more perpendicular entrance onto SD 38. The improvement would include east bound and west bound turn lanes to exit SD 38 onto the I-90 Speedway Entrance.

*Alternative 3 meets the purpose and need criterion for the corridor and is pulled forward for consideration as the preferred SD 38 mainline corridor improvement.*

## I-90 Exit 390 Interchange Options

The options considered for the I-90 Exit 390 Interchange will be configured to typical interchanges that allow for traffic to enter or exit the SD 38 and I-90 transportation corridors. An Interchange Modification Justification Report (IMJR) will be completed for this segment of the corridor. An IMJR is a planning document prepared to gain approval from the FHWA to modify an existing interstate interchange. Numerous configurations for the interchange were presented for evaluation, however, a preferred improvement for I-90 Exit 390 was not selected during this environmental screening. Figures for the options that have been considered up to this point are included in **Figure 4 in Appendix A**.

Options 1, 2, 3, 4, 5, and 7 for the interchange configuration were determined to not meet the purpose and need for the project and have been eliminated from consideration. Those options are discussed below.

### Option 1: Folded Diamond – Match Existing SD 38 Alignment

The alignment of SD 38 would remain the same east and west of the I-90 Exit 390 interchange. The access road located on 466<sup>th</sup> Avenue off of SD 38 to a commercial business, Goos RV, would be moved west along SD 38. The new alignment would cross an unnamed tributary of Skunk Creek two times and would require the construction of a new access road to the east of the subdivision. The curves and lengths of the interchange ramps would be slightly adjusted to allow for safer entry and exit throughout the interchange. Impacts to a commercial business, Goos RV, would also occur on the southwest corner of the business where a new west-bound I-90 ramp would be constructed. South of I-90, 466<sup>th</sup> Avenue would be moved west to allow for a perpendicular intersection onto SD 38. 466<sup>th</sup> Avenue aligns with the eastbound interchange ramps to SD 38. The access along 466<sup>th</sup> Avenue to a commercial business, Cemcast Pipe and Precast, would be re-routed to the west onto private land. An access road to the Hartford Wastewater Treatment Facility would be routed to access 466<sup>th</sup> Avenue South of I-90 and SD 38. Refer to **Interchange Option 1**.

### Option 2: Folded Diamond – 65 Degree Skew (50 mph – SD 38)

The alignment of SD 38 would be placed at a 65 degree skew to I-90. The access road located on 466<sup>th</sup> Avenue off SD 38 to a commercial business, Goos RV, would be moved north along the new SD 38 alignment. Curves of interchange ramps would be adjusted to allow for a safer entry and exit throughout the interchange. South of I-90, the 466<sup>th</sup> Avenue intersection with SD 38 would be moved west to allow for a perpendicular intersection onto SD 38. 466<sup>th</sup> Avenue would align with the eastbound onramp and offramp to SD 38. The access along 466<sup>th</sup> Avenue to a commercial business, Cemcast Pipe and Precast, would be re-routed to the west onto private land. An access road to the Hartford Wastewater Treatment Facility would be routed to access 466<sup>th</sup> Avenue South of I-90 and SD 38. Refer to **Interchange Option 2**.

### Option 3: Folded Diamond – 75 Degree Skew (50 mph – SD 38)

The alignment of SD 38 would be placed at a 75 degree skew to I-90. The access road located on 466<sup>th</sup> Avenue off SD 38 to a commercial business, Goos RV, would be moved north and west along the skewed SD 38 alignment. The curves and lengths of interchange ramps would be adjusted to allow for a safer entry and exit throughout the interchange. South of I-90, the 466<sup>th</sup> Avenue intersection with SD 38 would be moved west to allow for a perpendicular intersection onto SD 38. 466<sup>th</sup> Avenue would align with the eastbound interchange ramps to SD 38. The access along 466<sup>th</sup> Avenue to a commercial business, Cemcast Pipe and Precast, would be re-routed to the west onto private land. An access road to the Hartford Wastewater Treatment Facility would be routed to access 466<sup>th</sup> Avenue South of I-90 and SD 38. Refer to **Interchange Option 3**.

### Option 4: $\frac{3}{4}$ Standard Diamond

The alignment of SD 38 would be placed at a 75 degree skew to I-90. The access road located on 466<sup>th</sup> Avenue off SD 38 to a commercial business, Goos RV, would be moved north and west along SD 38 alignment. The westbound onramp would be moved west of SD 38 to enter I-90 and the westbound exit ramp would be moved west to align with the onramp to I-90. The I-90 eastbound interchange ramps curves and lengths would be improved to allow for a safer entry and exit throughout the interchange. South of I-90, the 466<sup>th</sup> Avenue intersection with SD 38 would be moved west to allow for a perpendicular intersection onto SD 38. 466<sup>th</sup> Avenue would be realigned to intersect with the eastbound interchange ramps. An access road to the Hartford Wastewater Treatment Facility would be routed to access 466<sup>th</sup> Avenue South of I-90 and SD 38. Refer to **Interchange Option 4**.

## Option 5: Standard Diamond Interchange

The SD 38 alignment would be placed at a 75 degree skew to I-90. . The access road on 466<sup>th</sup> Avenue off SD 38 to a commercial business, Goose RV, would be moved north and west along SD 38. The westbound onramp and eastbound offramp would be moved west of SD 38 to create the standard diamond interchange configuration. The westbound offramp and eastbound onramp would be configured to the standard diamond interchange. South of I-90, 466<sup>th</sup> Avenue would intersect along its original alignment and the Hartford Wastewater Treatment Facility access road would route to south of SD 38 to intersect with 466<sup>th</sup> Avenue. Refer to **Interchange Option 5**.

## Option 7: Standard Diamond Interchange Shifted East

The alignment of SD 38 would be placed at a 75 degree skew to I-90 and shifted east.. The access road on 466<sup>th</sup> Avenue off SD 38 to a commercial business, Goose RV, would be moved north and west along SD 38. The westbound onramp and eastbound offramp of I-90 would be moved west of SD 38 to create the standard diamond interchange configuration. The westbound offramp and eastbound onramp would be configured to the standard diamond interchange. South of I-90, 466<sup>th</sup> Avenue would intersect slightly east of its original alignment for a perpendicular entry and exit to SD 38. The Hartford Wastewater Treatment Facility access road would route south of SD 38 to intersect with 466<sup>th</sup> Avenue. Refer to **Interchange Option 7**.

*Options 1, 2, 3, 4, 5, and 7 have significant resource impacts include impacts to businesses, residences, and the Hartford Wastewater Treatment Facility and have been further eliminated from consideration.*

Interchange configuration Options 3.2, 6, 8, 9, and 10 met the screening criterion and are further discussed below.

## Option 3.2: Folded Diamond – 75 Degree Skew (50 mph – SD 38)

The alignment of SD 38 would be placed at a 75 degree skew to I-90. The access road located on 466<sup>th</sup> Avenue off SD 38 to a commercial business, Goos RV, would be moved north and west along the skewed SD 38 alignment. The curves and lengths of interchange ramps would be adjusted to allow for a safer entry and exit throughout the interchange. South of I-90, the 466<sup>th</sup> Avenue intersection with SD 38 would be moved east of the current intersection onto SD 38. The new 466<sup>th</sup> Avenue intersection with SD 38 would route through a business, ANCO Underground LLC. An access road to the Hartford Wastewater Treatment Facility would be routed to access 466<sup>th</sup> Avenue South of I-90 and SD 38. Refer to **Interchange Option 3.2**.

## Option 6a: Folded Diamond Interchange with Roundabouts – 75 Degree Skew

The alignment of SD 38 would be placed at a 75 degree skew to I-90. The curves and lengths of the interchange ramps would be adjusted to allow for a safer entry and exit throughout the interchange. Roundabouts would be placed in two locations where SD 38 intersects with the interchange ramps. The access road located on 466<sup>th</sup> Avenue off SD 38 to a commercial business, Goos RV, would be moved north and west along SD 38. South of I-90, 466<sup>th</sup> Avenue would intersect west of its original alignment. The Hartford Wastewater Treatment Facility access road would intersect with 466<sup>th</sup> Avenue southwest of the roundabout. Refer to **Interchange Option 6a**.

## Option 6b: Folded Diamond Interchange with Roundabouts – Existing Alignment

The alignment of SD 38 would stay along the existing alignment. The curves and lengths of the

interchange ramps would be slightly adjusted to allow for a safer entry and exit throughout the interchange. Roundabouts would generally be placed in the locations where SD 38 currently intersects with the interchange ramps; the western-most roundabout would be placed slightly west of the current interchange ramp. The access road located on 466<sup>th</sup> Avenue off SD 38 to a commercial business, Goos RV, would be moved north and west along SD 38. South of I-90, 466<sup>th</sup> Avenue would intersect west of its original alignment and in-line with the roundabout. The Hartford Wastewater Treatment Facility access road would intersect with 466<sup>th</sup> Avenue southwest of the roundabout. Refer to **Interchange Option 6b**.

### Option 8: Single Point Urban Interchange (SPUI)

The alignment of SD 38 would be placed at a 75 degree skew to I-90. The access road on 466<sup>th</sup> Avenue off SD 38 to a commercial business, Goose RV, would be moved north and west along SD 38. The westbound onramp and eastbound offramp of I-90 would be moved west of SD 38 to create a single point urban interchange. The westbound offramp and eastbound onramp would be configured to a single point urban interchange. South of I-90, 466<sup>th</sup> Avenue would intersect along its original alignment for a perpendicular entry and exit to SD 38. The Hartford Wastewater Treatment Facility access road would route south of SD 38 to intersect with 466<sup>th</sup> Avenue. Refer to **Interchange Option 8**.

### Option 9: Diverging Diamond Interchange (DDI)

The alignment of SD 38 would be placed at a 75 degree skew to I-90. The access road on 466<sup>th</sup> Avenue off SD 38 to a commercial business, Goose RV, would be moved north and east along SD 38. The westbound onramp and eastbound offramp of I-90 would be moved west of SD 38 to create a diverging diamond interchange. The westbound offramp and eastbound onramp would be configured to a diverging diamond interchange. South of I-90, 466<sup>th</sup> Avenue would intersect just east of its alignment for a perpendicular entry and exit to SD 38. The Hartford Wastewater Treatment Facility access road would route south of SD 38 to intersect with 466<sup>th</sup> Avenue. Refer to **Interchange Option 9**.

### Option 10: Tight Urban Diamond Interchange

The alignment of SD 38 would be placed at a 75 degree skew to I-90. The access road on 466<sup>th</sup> Avenue off SD 38 to a commercial business, Goos RV, would remain in approximately the same location and utilize the existing access road. The terminal intersection of the westbound on-ramp and eastbound off-ramp of I-90 would be moved east of the current SD 38 alignment to create a tight urban diamond interchange, with the ramps themselves shifting slightly north of the I-90 alignment. The terminal intersection of the westbound off-ramp and eastbound on-ramp would stay on the current SD 38 alignment and configured to a tight urban diamond interchange, with the ramps themselves shifting slightly south of the I-90 alignment. South of I-90, 466<sup>th</sup> Avenue would intersect just south of its current alignment for a perpendicular entry and exit to SD 38. The Hartford Wastewater Treatment Facility access road would route south of the new SD 38 alignment to intersect with 466<sup>th</sup> Avenue. Refer to **Interchange Option 10**.

*Options 3.2, 6a, 6b, 8, 9, and 10 are alternatives coming forward from the design team and the SAT, but one preferred alternative has not been selected. Additional interchange configurations may also be presented during the IMJR process.*

## ENVIRONMENTAL RESOURCES AND ISSUES

This section will identify the resources or issues that will be integral for NEPA documentation with future projects. For a photo log completed during the field reconnaissance and an overview figure of the SD 38 corridor, refer to **Appendix B**.

### WATER RESOURCES, INCLUDING WATERS OF THE U.S., WATERS OF THE STATE, WETLANDS, STORM WATER, AND FLOODPLAINS

All waters in South Dakota are considered Waters of the State. According to the federal Clean Water Act (CWA), Waters of the United States (U.S.) are a subset of waters of the state that are also regulated by the federal government. Waters are regulated under the CWA in one or more of the following ways:

- (1) Obtain a permit for placement of dredge or fill material in Waters of the U.S. from the United States Army Corps of Engineers (USACE) (Section 404 of the CWA),
- (2) Obtain a Surface Water Discharge permit for the discharge of pollutants from point sources into Waters of the State from the South Dakota Department of Agriculture and Natural Resources (SDANR) or a National Pollutant Discharge Elimination System (NPDES) permit for projects impacting tribal lands from the U.S. Environmental Protection Agency for discharges to Waters of the U.S. (Section 402 of the CWA), and
- (3) For federally issued permits, obtain water quality certification from the SDDANR, or for projects impacting tribal lands, from the EPA (Section 401 of the CWA).

All projects should also be developed consistent with the state nonpoint source pollution management program (Section 319).

Water resources that are considered “jurisdictional” under the CWA are subject to the multiple federal regulatory requirements set forth with Section 404 of the CWA. The CWA additionally requires that each state develop standards for their waters of the state to ensure the beneficial uses are protected. South Dakota has developed surface water quality standards for all Waters of the State. If water resources are determined to be non-jurisdictional as Waters of the U.S., the state’s regulatory requirements for Waters of the State must still be met. The environmental analysis of aquatic resources encompasses many types of resources that may be encountered in the planning, construction, and maintenance of transportation projects.

#### Methodology

A windshield survey identified water resources, wetlands, streams, and open water features within the Project Study Area. To provide approximate boundaries of these identified water resources, a desktop delineation was conducted. The watersheds, specifically the 8-digit Hydrologic Unit Code (HUC), were identified by the NEPA Study Area level to consider potential direct, indirect, and cumulative effects to aquatic resources.

The Federal Emergency Management Agency (FEMA) Flood Map Service Center was reviewed online for designated floodplains occurring in the Project Study Area (FEMA 2022). A Flood Insurance Rate Map (FIRM) is the insurance and floodplain map produced by FEMA that identifies, based on detailed or approximate analysis, the areas subject to flooding within an area.

## Existing Conditions

Water resources, including Waters of the US, Waters of the State, wetlands, and floodplains are present within the Project Study Area.

### Waters of U.S., Waters of the State, and Wetlands

The watersheds within the Project Study Area include one 8-digit HUC watershed, the Lower Big Sioux River subbasin, 10170203, and one ten-digit HUC watershed, the Skunk Creek watershed, 1017020311. Several 12-digit HUC watersheds are found within the Project Study Area, including the Beaver Lake watershed, 101702031101, Buffalo Ridge-Skunk Creek, 101702031102, Willow Creek, 101702031103, and Outlet Skunk Creek, 101702031105 (USGS 2023). Refer to **Figure 5** in **Appendix A**.

The EPA's regulations implementing Section 305(b) of the CWA require states to identify waterbody segments where the water quality does not meet the applicable water quality standards. Section 303(d) of the CWA requires states to develop Total Maximum Daily Loads (TMDLs) for those segments that do not meet the applicable water quality standards. The TMDLs identify the sources of the pollutants contributing to the impairment and allocate an allowable loading for each point source and nonpoint source of pollution.

The SDDANR monitors and assesses the water quality for watersheds across the state. Every two years, the SDDANR publishes a report integrating the requirements of Section 303(d) and 305(b) of the federal CWA. This report identifies waters of the state that are not meeting their water quality standards and prioritizes the development of the TMDLs. The 2024 Integrated Report identified the following water quality impairments in the Project Study Area:

- Skunk Creek is impaired due to *E. coli* bacteria.

These segments need to be assessed to identify the cause(s) of the impairment and identify the total maximum daily load (TMDL) for each pollutant. The EPA has approved TMDLs for for *E. coli* and total suspended solids in the Big Sioux River near the study area. A TMDL has not yet been developed for total dissolved solids in this segment of the Big Sioux River. The *E. coli* TMDL for Skunk Creek has been developed by SDDANR and is nearing completion. All projects shall be developed consistent with the approved TMDLs.

The windshield survey and desktop delineation identified approximately 5.5 acres of potential jurisdictional Waters of the U.S. within the Project Study Area, including Skunk Creek, Willow Creek, and unnamed tributaries to Skunk Creek and Willow Creek. Verification of jurisdictional status would be completed by the US Army Corps of Engineers (USACE) during the Section 404 permit application process. Skunk Creek and Willow Creek are perennial streams. Willow Creek flows south, eventually joining Skunk Creek, which continues flowing in a southeasterly direction, eventually joining the Big Sioux River east of Interstate 29 and north of Louise Avenue in Sioux Falls. The unnamed tributaries to Skunk Creek and Willow Creek were intermittent, likely having spring flows that diminish in the late summer and fall months.

SDDANR has assigned beneficial uses to Waters of the State. Skunk Creek is classified by SDDANR for the following beneficial uses:

- (6) Warmwater marginal fish life propagation waters;
- (8) Limited-contact recreation waters;
- (9) Fish and wildlife propagation, recreation, and stock watering waters; and

- (10) Irrigation waters.

Willow Creek and the unnamed tributaries are classified by SDDANR for the following beneficial uses:

- (9) Fish and wildlife propagation, recreation, and stock watering waters; and
- (10) Irrigation waters.

Based upon the desktop delineation, there are approximately 75 acres of wetlands present within the Project Study Area. Wetland basins vary in size and are primarily classified as seasonal and temporary resources, likely becoming dry in the late summer and fall months. Although not as common as basin wetlands, sloped wetlands also occur throughout the corridor. Riverine fringe wetlands were present adjacent to the stream channels. Desktop delineated wetlands and waters of the U.S. within the Project Study Area are shown on **Figures 6a to 6o** in **Appendix A**.

The wetlands are classified by SDDANR for the following beneficial use:

- (9) Fish and wildlife propagation, recreation, and stock watering waters.

### Stormwater

Water quality and the intensity, timing, and velocity of runoff events are closely related to stormwater management. Surfaces with vegetation slow or capture runoff, but when these areas are replaced by impervious surfaces such as roofs, driveways, parking lots, roads, and streets, runoff is substantially increased. Stormwater management, especially on an area wide basis, has generally not been considered in the rural development review process. Minnehaha County is establishing Best Management Practices (BMP's) for a stormwater management program. BMPs would include vegetated filter strips, permeable pavement, riparian areas, and open space designs that prevent stormwater pollution from entering waterways (Minnehaha County 2015).

Existing stormwater drainage structures in the Project Study Area within the ROW of state-maintained roadways are under the jurisdiction of the SDDOT. SD 38 in the Project Study Area has multiple culvert pipe structures, two box culvert structures at the unnamed tributary crossings of Skunk Creek, one concrete slab bridge over Skunk Creek, and box culvert structures at the unnamed tributary of Willow Creek and Willow Creek crossings.

The SDDANR has issued a Municipal Separate Storm Sewer System permit to the SDDOT under the authorities of the CWA. Under this permit, the SDDOT has been required to develop and implement a stormwater management program to control stormwater runoff and control erosion associated with the South Dakota interstate road system around the city of Sioux Falls.

### Floodplains

The Project Study Area crosses several designated FEMA floodplain areas (FEMA 2023a). The Flood Insurance Rate Map (FIRM) number and information regarding mapped floodplain, if present, is available in **Table 7**.

Zone A or Zone AE refers to areas with a 1% annual chance of flooding or 100-year floodplain. Zone AE refers to areas where base flood elevations have been modeled for the 100-year floodplain and a floodway has been identified. The designated floodplains are shown on **Figures 6a to 6o** in **Appendix A**.

**Table 7. FEMA FIRM and Floodplain Designation**

<b>FIRM No.</b>	<b>Floodplain Designation</b>	<b>Associated Waterway</b>
46099C0225D	Zone X	Surface Water Bodies – Voelker I WPA
46099C0240D	None	None
46099C0245D	None	None
46099C0410D	Zone A, Zone AE, LOMRs	Unnamed Tributary of Skunk Creek, Skunk Creek
46099C0426D	None	None
46099C0427D	Zone A	Unnamed Tributary of Willow Creek, Willow Creek
46099C0431D	Zone A	Unnamed Tributary of Willow Creek

A Letter of Map Revision (LOMR) is FEMA’s modification to an effective FIRM, Flood Boundary and Floodway Map, or both. LOMRs are generally based on the implementation of physical measures that affect the hydrologic or hydraulic characteristics of a flooding sources and thus result in the modification of the existing regulatory floodway, the effective Base Flow Elevations (BFEs), or the Special Flood Hazard Area (SFHA) (FEMA 2023b). Within the Project Study Area in Hartford, there are four LOMRs in effect: LOMR 10-08-0469P (effective 2/14/2011), LOMR 13-08-1106P (effective 6/16/2014), LOMR 16-08-0101P (effective 9/23/2016), and LOMR 21-08-0753P (effective 3/23/2022) (FEMA 2023a).

### Groundwater

Water resources within Minnehaha County occur as surface water and groundwater. Glacial aquifers, primarily unconsolidated sand and gravel deposited as outwash by meltwater from glaciers, underlie about 240 square miles of Minnehaha County. The Project Study Area is underlain by portions of three glacial aquifers (the Big Sioux, Skunk Creek, and Wall Lake) and two bedrock aquifers (Split Rock Creek and Sioux Quartzite) (Niehus 1994). In Minnehaha County, a Water Source Protection Overlay District has been established to preserve the quality and quantity of the area’s water resources to ensure a safe and adequate supply of drinking water. The Water Source Protection Overlay District is identified within the Skunk Creek and Willow Creek drainages (Minnehaha County 2017). The Water Source Protection Overlay District is shown on **Figures 6h-6k** and **6m-6o**. Permitted, conditional, and prohibited land uses allowed within the Water Source Protection Overlay District can be found in **Table 8** (Minnehaha County 2024).

**Table 8. Uses within the Water Source Protection Overlay District in Minnehaha County**

Permitted Uses	Conditional Uses	Prohibited Uses
<p>1. Tanks used for the storage of regulated substances shall adhere to the regulations set forth in the zoning ordinances in Article 14A.04 of the Minnehaha County ordinances.</p> <p>2. Sewer lines must be PVC material with sealed joints.</p> <p>3. When pastured animals are confined for winter feeding and the number exceeds 200 animal units, measures shall be employed to contain all wastes on site. Winter feeding of pastured animals shall not constitute a concentrated animal feeding operation.</p>	<p>Conditional use permits are required for any use which involves the storage and/or use of a regulated substance. All available methods of preventing and controlling contamination of groundwater from waste and other contaminants shall be employed.</p>	<p>1. Sanitary landfill, solid waste transfer facility.</p> <p>2. Waste disposal except the spreading of solid and liquid animal waste.</p> <p>3. Sewage disposal pond except when in conjunction with a concentrated animal feeding operation, which is a nonconforming use. In such case, a conditional use permit shall be required for the disposal pond.</p> <p>4. Disposal of radioactive waste.</p> <p>5. Disposal of snow containing de-icing chemical.</p> <p>6. Concentrated animal feeding operation.</p> <p>7. Injection well (Class V).</p> <p>8. Petroleum products terminal.</p> <p>9. Junk or salvage yard.</p> <p>10. Manufacturing of a regulated substance.</p> <p>11. Unenclosed storage of road salt</p> <p>12. Cemetery.</p>

## Next Steps

The No Build Alternative would have no effect to Waters of the U.S., Waters of the State, wetlands, stormwater, or floodplains.

All four alternatives have the potential to have permanent impacts to Waters of the U.S. As projects identified from this study progress, field delineations for each survey area would be conducted. For each project, a wetland delineation report and a request for an approved jurisdictional determination would be submitted to the USACE. Projects should be designed to minimize impacts to aquatic resources, wetlands, and streams.

Under Nationwide Permit 14 or 23, if permanent impacts are kept to less than 0.1 acre for jurisdictional, individual wetlands and 0.03 acre for Other Waters of the U.S., a pre-construction notification (PCN) to the USACE would not be needed. If permanent impacts exceed 0.1 acre to any jurisdictional wetland or 0.03 acre to any Water of the U.S., a PCN would be required. Compensatory mitigation under Section 404 would be required for all losses of stream bed that exceed 0.03 acre and permanent impacts to wetlands above 0.1 acre. For determination of permit type (nationwide or individual) for each specific improvement project, coordination with the USACE would be completed. If an individual Section 404 permit is needed, a Section 401 State Water Quality Certification would be prepared and submitted to SDDANR and the USACE. Non-jurisdictional wetlands are still waters of the state. For non-jurisdictional wetlands, Executive Order (EO) 11990 would require mitigation for any natural wetland areas.

Projects identified in this study that would disturb one or more acres will be required to obtain coverage under the SDDANR *General Permit Authorizing Stormwater Discharges Associated with Construction*

*Activities under the South Dakota Surface Water Discharge System* (General Permit) for discharge activities to waters of the state. The General Permit requires the development of a Stormwater Pollution Prevention Plan (SWPPP). The SWPPP would include temporary and permanent sediment and erosion control measures to minimize soil erosion and the discharge of pollutants into waters of the state. A Notice of Intent would be prepared and submitted to SDDANR for coverage under the General Permit.

Drainage and stormwater analysis would be needed as the selected alternatives move forward into specific projects. Pipe, culvert, and bridge structures may require modifications with any future roadway improvements. Modifications would be reviewed for each specific project identified in this study and would follow SDDOT design standards. Any future roadway improvements would need to be evaluated to ensure applicable water quality standards are met, with potential permitting involving state and federal agencies as applicable.

A project located within the Project Study Area would be anticipated to be designed to not affect the hydrologic or hydraulic characteristics of the area or result in modification to the existing floodways. FEMA would be contacted to review the Project to determine if the Project would have a no rise or require a Conditional Letter of Map Revision (CLOMR).

## WILD AND SCENIC RIVERS

The National Wild and Scenic Rivers System was created by Congress in 1968 (Public Law 90-542; 16 U.S.C. 1271 et seq.) to preserve certain rivers with outstanding natural, cultural, and recreational values in a free-flowing condition for the enjoyment of present and future generations. The Wild and Scenic River Act is notable for safeguarding the special character of these rivers, while also recognizing the potential for their appropriate use and development. South Dakota has approximately 9,513 total miles of river, of which 93 miles are designated as wild & scenic, less than 1% of the state's river miles. The Missouri River is designated as wild and scenic from Gavins Point Dam near Yankton, downstream to Ponca State Park, Nebraska, and from Fort Randall Dam to Lewis and Clark Lake.

### Methodology

The National Wild and Scenic Rivers System website was reviewed for rivers designated as wild and scenic within the NEPA Study Area (NWSRS 2022).

### Existing Conditions

There are no designated wild and scenic rivers in the NEPA Study Area.

### Next Steps

No further steps are needed. Consideration of Wild and Scenic Rivers is not required in subsequent NEPA studies.

## THREATENED AND ENDANGERED SPECIES, MIGRATORY BIRDS, EAGLES, AND UNIQUE WILDLIFE HABITAT

NEPA requires the identification and assessment of reasonable alternatives that will avoid and minimize adverse effects on the quality of the natural environment, which includes species and habitats protected under the Endangered Species Act (ESA), the Migratory Bird Treaty Act (MBTA), and the

Bald and Golden Eagle Protection Act (BGEPA). Protecting threatened and endangered species in the planning, construction, and maintenance of transportation projects is an important step in complying with the ESA.

## Methodology

The United States Fish and Wildlife Service (USFWS) provides a list of threatened or endangered species by county. A list of threatened and endangered species for specific areas can also be accessed by requesting an Official Species List through the USFWS Information for Planning and Consultation (IPaC) system. An official species list of threatened and endangered species for the Project Study Area was obtained through the USFWS IPaC system (USFWS 2022a). The IPaC query and species list was updated in June 2024.

South Dakota Game Fish & Parks (SDGFP) provides a listing of documented occurrences of state listed threatened and endangered species by county. A list of documented occurrences in Minnehaha County was obtained on the SDGFP website (SDGFP 2016).

## Existing Conditions

The Project Study Area lies within two ecoregions, the Prairie Coteau Region of the Northern Glaciated Plains Ecoregion and the Loess Prairies Region of the Western Corn Belt Plains Ecoregion (EPA 2022a). The Prairie Coteau Region has a characteristic tightly undulating and hummocky landscape, no distinct drainage pattern, and closely spaced semipermanent and seasonal wetlands. The Loess Prairie Region is generally rock-free with scattered wetlands on level to gently rolling plains, with most of the original tallgrass prairie vegetation having been converted to intensive row crop agriculture (EPA 2022a).

Water resources within Minnehaha County occur as surface water and groundwater. The Project Study Area is underlain by portions of three glacial aquifers (the Big Sioux, Skunk Creek, and Wall Lake) and two bedrock aquifers (Split Rock Creek and Sioux Quartzite) (Niehus 1994). The Project Study Area is in the lower Big Sioux River Basin, with drainage occurring in an easterly direction toward the Big Sioux River, which delineates the South Dakota-Iowa border (Niehus 1994). Wildlife species use aquatic ecosystems and terrestrial corridors within the Project Study Area for habitat, breeding and nesting areas, escape cover, travel corridors, and preferred food sources. Aquatic and terrestrial animals can travel parallel to the shore or creek edges to move between similar habitat patches in fragmented landscapes with otherwise sparse natural cover. Wildlife can also move perpendicular to the riparian edge, to and from aquatic and terrestrial habitats, to forage, lay eggs, or even hibernate. Although wildlife can utilize these areas, movement in either direction away from riparian areas often exposes wildlife to threats such as vehicle strike and predation, especially in maintained landscapes with minimum natural cover.

Suitable aquatic and terrestrial habitats for a variety of species are present within the Project Study Area. Vegetation, including cropland, grasses, and larger trees, is present within the Project Study Area, and is likely utilized by wildlife species, including migratory bird species.

## Threatened and Endangered Species

The USFWS IPaC query (Project Code No. 2023-0028018) returned three threatened, one endangered, one proposed endangered, and one candidate species as having the potential to occur in the Project Study Area. The IPaC query was updated in October 2024 (USFWS 2024a). Refer to **Table 9**.

**Table 9. Federally Listed Endangered, Threatened, or Candidate Species in the Project Study Area**

Common Name	Scientific Name	Listing Status
Northern Long-eared Bat	<i>Myotis septentrionalis</i>	Endangered
Rufa Red Knot	<i>Calidris canutus rufa</i>	Threatened
Dakota Skipper	<i>Hesperia dacotae</i>	Threatened
Monarch Butterfly	<i>Danaus plexippus</i>	Candidate
Western Regal Fritillary	<i>Argynnis idalia occidentalis</i>	Proposed Threatened
Western Prairie Fringed Orchid	<i>Platanthera praeclara</i>	Threatened

The SDGFP Environmental Review Tool was used to identify state and federally listed threatened, endangered, and candidate species that have a range distribution within the Project Area (SDGFP 2022b). Within the project area, one additional species has been documented, the Lined Snake. Refer to **Table 10**. The northern river otter (*Lontra canadensis*) is also listed on the SDGFP list as a documented state-threatened species found in Minnehaha County (SDGFP 2016); however, the otter was removed from the state list in May 2020.

**Table 10. State Listed Endangered or Threatened Species Documented in Minnehaha County**

Common Name	Scientific Name	Listing Status
Lined Snake	<i>Tropidoclonion lineatum</i>	State Endangered

The following species narratives provide summarized habitat descriptions for the federal and state listed species above.

### Northern Long-eared Bat

The northern long-eared bat (NLEB) is a wide-ranging bat species that typically overwinters in caves or mines, called hibernacula, and spends the remainder of the year in forested habitats. The winter hibernacula for the NLEB generally have constant air temperatures, high humidity, and no air currents. Bats tend to hibernate most often in small crevices or cracks. During the summer and portions of the fall and spring, NLEBs may be found roosting singly or in colonies underneath bark, in cavities or crevices of both live trees and snag (dead) trees. The species has also been found roosting in structures, such as barns and sheds (USFWS 2024b).

Riparian wooded areas, rural residential shelterbelts, and man-made structures are present within the Project Study Area and could provide suitable habitat for the NLEB.

### Rufa Red Knot

The rufa red knot is a medium-sized shorebird, easily recognized during the breeding season by its distinctive rufous (red) plumage. The breeding range of the species is in the central Canadian Arctic, with nesting occurring in dry, slightly elevated tundra locations, often on windswept slopes with little vegetation. Nest sites are generally within 600 feet of a freshwater wetland. Each year, some individuals make one of the longest distance migrations, traveling up to 19,000 miles annually from the Canadian Arctic to the wintering grounds in South America, or vice versa (USFWS 2020). Although not a common occurrence, rufa red knots have been observed within South Dakota, which can provide stop-over habitat and staging areas along river corridors.

Suitable habitat for the rufa red knot does not exist within the Project Study Area.

### Dakota Skipper

The Dakota skipper is a small butterfly that lives in high-quality mixed and tallgrass prairie. The species

experienced a decline coinciding with the conversion and degradation of its prairie habitat, losing 85-99% of its original tallgrass prairie in its historical range. The Dakota skipper lives in two types of prairie habitats: moist bluestem prairie with three wildflower species (wood lilies, harebells, and smooth camas) or upland prairie that is relatively dry and dominated by bluestem grasses, needlegrasses, and coneflowers (USFWS 2024c).

Vegetation within the Project Study Area primarily includes roadside ditches consisting of smooth brome grass that is mowed annually. Moist bluestem prairie and upland prairie grasses are unlikely to occur within the Project Study Area due to repetitive mowing and haying during the growing seasons. Therefore, suitable habitat for the Dakota skipper does not exist within the Project Study Area.

### Monarch Butterfly

The monarch butterfly is large and conspicuous, with bright orange wings covered with black veins and surrounded by a black border with white spots. During the breeding season, monarchs lay their eggs on their obligate milkweed host plant (*Asclepias* spp.), and larvae emerge after two to five days. The larvae feed on milkweed, pupate into a chrysalis, and emerge as an adult butterfly 15 to 32 days after initially hatching. Milkweed and flowering plants are required for monarch habitat; adult monarch butterflies will feed on the nectar of many species of flowers during migration and breeding but will only lay eggs on the milkweed plant (USFWS 2024d).

Given the likely presence of milkweed in roadside ditches, the monarch butterfly is likely present within the Project Study Area. As a candidate species, monarchs have no legal status under the ESA (50 CFR part 402) on non-federal lands and will be reevaluated in 2024 for listing. However, on federally owned lands, a more pro-active approach to avoidance of activities that may lead to take of the species may be implemented during the May 1 to August 31 timeframe, the larval growth season of the monarch butterfly.

### Western Regal Fritillary

The western regal fritillary is similar to the monarch butterfly in appearance; however, it is smaller in size. The western regal fritillary has six legs and vibrant orange wings with black marks that fade into a cobalt blue on the outer part of the wings with white spots along the border. Regal fritillary butterflies live in tall-grass prairie and other open and sunny locations such as damp meadows, marshes, wet fields, and mountain pastures. Regal fritillary habitat has been identified as large grassland areas with prairie remnants or lightly grazed pasture lands containing prairie vegetation where topography often includes hills and valleys. Regal fritillary butterflies depend on three main habitat components: violet hostplants for larvae, nectar plants for adults, and native warm-season bunch grasses that provide protective sites for all life stages (USDA 2024).

### Western Prairie Fringed Orchid

The western prairie fringed orchid is a terrestrial member of the orchid family, growing up to 4 feet tall, and historically occurring in the tallgrass prairie region of the United States in areas of high soil moisture. Main threats to the orchid include the conversion of remnant prairie to cropland, spread of non-native invasive plant species, encroaching woody vegetation, and changes in hydrology. No populations are known to exist within South Dakota (USFWS 2021).

Vegetation within the Project Study Area primarily includes roadside ditches consisting of smooth brome grass that is mowed annually. Since there are no known populations of western prairie fringed orchid in South Dakota and tallgrass prairie does not exist in the Project Study Area, the western prairie fringed orchid is not expected to occur in the Project Study Area.

## Topeka Shiner

The Topeka shiner is a small minnow that lives and breeds in graveled pools of low-order prairie streams with low flows and floodplain connectivity. After being federally listed in 1999 as an endangered species, survey efforts revealed additional extant populations in South Dakota and Minnesota, while population reductions continue in other states. South Dakota's Topeka shiner extant streams include 27 streams within the James River watershed, not including the James River main stem, 15 streams within the Vermillion River watershed, including the Vermillion River main stem, and 30 streams within the Big Sioux River watershed (10 shared with Minnesota), including the Big Sioux River main stem (USFWS 2018).

Topeka shiners have been documented within Minnehaha County. The Skunk Creek drainage is listed as "potentially occupied", and the Willow Creek drainage has documented occurrences prior to 1999 (SDGFP 2022a).

## Lined Snake

The lined snake is a small snake (9-15 inches) with three light-colored stripes running the length of its body. The lined snake is found in open grasslands and sparsely wooded areas, preferring moist habitat near springs, ponds, marshes, streams, and rivers. The snake can also be found in urban areas such as city lots, parks, cemeteries, and gardens. Within South Dakota, individuals have been documented in Hutchinson, Minnehaha, Lincoln, and Union Counties (SDGFP 2020).

Minnehaha County has documented occurrences of the lined snake and, due to its occupancy of a variety of habitats, suitable habitat for the lined snake may exist in the Project Study Area.

## Special Status Species

The birds listed below in **Table 11** are birds of particular concern either for occurring on the USFWS Birds of Conservation Concern (BCC) list or warrant special attention in the Project Study Area (USFWS 2024a).

**Table 11. Special Status Species**

Common Name	Scientific Name	Listing	Probability of Presence
American Golden-plover	<i>Pluvialis dominica</i>	BCC	September
Bald Eagle	<i>Haliaeetus leucocephalus</i>	BGEPA*	Year Round
Black Tern	<i>Chlidonias niger</i>	BCC	May
Black-billed Cuckoo	<i>Coccyzus erythrophthalmus</i>	BCC	May
Bobolink	<i>Dolichonyx oryzivorus</i>	BCC	May – August
Chimney Swift	<i>Chaetura pelagica</i>	BCC	April – September
Eastern Whip-poor-will	<i>Antrostomus vociferus</i>	BCC	August
Franklin's Gull	<i>Leucophaeus pipixcan</i>	BCC	April – November
Grasshopper Sparrow	<i>Ammodramus savannarum perpallidus</i>	BCC	May-August
Hudsonian Godwit	<i>Limosa haemastica</i>	BCC	April
Lesser Yellowlegs	<i>Tringa flavipes</i>	BCC	April – May, August-Sept
Marbled Godwit	<i>Limosa fedoa</i>	BCC	April – May
Northern Harrier	<i>Circus hudsonius</i>	BCC	April – September
Pectoral Sandpiper	<i>Calidris melanotos</i>	BCC	April, May, July – October
Red-headed Woodpecker	<i>Melanerpes erythrocephalus</i>	BCC	May – June, August – Sept
Rusty Blackbird	<i>Euphagus carolinus</i>	BCC	March, April, October
Semipalmated Sandpiper	<i>Calidris pusilla</i>	BCC	April, May, August
Upland Sandpiper	<i>Bartramia longicauda</i>	BCC	April, June – July
Western Grebe	<i>Aechmophorus occidentalis</i>	BCC	April – May
Wood Thrush	<i>Hylocichla mustelina</i>	BCC	May

\*Bald and Golden Eagle Protection Act

## Migratory Birds and Eagles

The Migratory Bird Treaty Act (MBTA) of 1918 provides a program for the conservation of migratory birds that fly through the United States. The lead federal agency for implementing the MBTA is USFWS. The law requires federal agencies to ensure that actions they authorize, fund, or carry out are not likely to jeopardize the continued existence of any migratory birds or result in the destruction or adverse modification of designated critical habitat of such species. The law makes it illegal for anyone to “take,” possess, import, export, transport, sell, purchase, barter or offer for sale, purchase, or barter, any migratory bird, or their parts, feathers, nests, or eggs. “Take” is defined as “to pursue, hunt, shoot, wound, kill, trap, capture, or collect, or any attempt to carry out these activities.”

In South Dakota, there are several bird species that traverse the state, rear young, or use stop-over habitat. Migratory birds, in addition to those mentioned in **Table 11** above, are likely present within the Project Study Area, and include, but not limited to duck and goose species, mourning doves, American robins, red-tailed hawks, sandhill and whooping cranes, warblers spp., swallows spp., curlews spp., and American white pelicans.

Bald eagles are listed by USFWS as species of concern in the Project Study Area. The bald eagle is not listed on the BCC list but instead warrants attention because of the Bald and Golden Eagle Protection Act (BGEPA) or for potential susceptibilities in offshore areas from certain types of development or activities. The BGEPA prohibits anyone, without a permit issued by the Secretary of the Interior, from “taking” bald or golden eagles, including their parts (including feathers), nests, or eggs.

In South Dakota, bald eagles can be a year-round resident or a migratory species. Generally, eagles are observed near larger rivers, such as the Missouri River, and open-water reservoirs where there is an abundant food supply and limited human activity. During a field reconnaissance in March 2024, a biologist from Banner Associates confirmed an active bald eagle nest and two bald eagle adults within the Project Study Area. The nest is located on the north side of SD 38 approximately 0.5 miles east of Humboldt, near Beaver Lake. Foraging and roosting habitat for bald eagles exists along the Project Study Area and within wooded reaches of Skunk Creek and Willow Creek outside of the Project Study Area. Several observations of bald eagles have been recorded near the Project Study Area (eBird 2022).

## Next Steps

The No Build Alternative would have no effect on threatened or endangered species, migratory birds, eagles, or unique wildlife habitats.

As projects are identified from the study, coordination with the USFWS and SDGFP should occur, focusing on impacts to threatened or endangered species, migratory birds, eagles, and unique wildlife habitats. USFWS lists are valid for 90 days; an updated species list would be needed prior to coordination with the USFWS. For the species that are likely present in the Project Study Area, project commitments would be identified for each project during agency coordination.

## CULTURAL RESOURCES

Section 106 of the National Historical Preservation Act (NHPA), as amended, guides the process of considering the effects of federal undertakings on historic properties. As such, Section 106 applies to federal agencies and to projects that are carried out with federal financial assistance; or those requiring a federal permit, license, or approval. Section 106 seeks to accommodate historic preservation concerns with the needs of federal undertakings through consultation among the agency officials and

other parties with an interest in the effects of the undertaking on historic properties. This section defines key terms used in the protection of historic properties, introduces the applicable authorities, and describes the environmental commitments established for compliance with Section 106.

Section 4(f) of the USDOT Act of 1966 provides protection to publicly owned parks, recreation areas (including recreational trails), wildlife or wildfowl refuges, or any publicly or privately-owned historic site listed or eligible for listing on the NRHP. Additional information on the correlation between Section 106 and Section 4(f) will be provided in Section 4(f) and Section 6(f) Resources section below.

## Methodology

A Level I cultural record search typically consists of initial records, maps, and literature searches, and will identify known cultural resources from previous investigations conducted within the Area of Potential Effect (APE). Literature searches may include sources from a state's State Historic Preservation Office, universities, libraries, museums, and historical societies. The Level I record search provides a cultural history of a project area and evaluates the area's known and potential sensitivity for cultural resources which may be affected by construction impacts. A Level I cultural records search to identify historic properties within the Project Study Area was requested through the State Archaeological Research Center (SARC).

## Existing Conditions

A Level I record search, *Class I Record Search for the South Dakota Department of Transportation (SDDOT) SD38 Corridor Planning Study, associated with SDDOT Project HP 5596(24)P, PCN 08LK, Minnehaha County, South Dakota*, was conducted. The record search returned two archaeological sites, 25 previous cultural resource surveys, one bridge, and two structures that have been previously documented within the Project Study Area. One of the two archaeological sites within the Project Study Area corridor have been determined eligible for the National Register of Historic Places (NRHP). Additionally, one of the two previously documented structures is a building that is unevaluated for the NRHP. Within a one-mile radius of the Project Study Area, eight archaeological sites, 52 previous surveys, 12 bridges, two cemeteries, and 35 structures have been recorded (SARC 2023).

An inactive railroad grade is located within the Project Study Area; the rails have been removed from the grade. The Level I record search determined portions of the railroad grade, once part of the Chicago & Northwestern Railroad, are eligible under the NRHP within the Project Study Area (SARC 2023). Additional unrecorded segments of the railroad grade are visible on aerial imagery within the Project Study Area and would also likely be eligible for listing under the NRHP.

## Next Steps

The No Build Alternative would have no effect on cultural resources.

As alternatives for the Project are defined, impacts on historical resources will be assessed. The APE for each project would be created and evaluated for the presence of cultural or historical resources. A Level III Cultural Resources Survey and Report would be completed for areas within the APE that have not been previously surveyed.

To the extent possible and practical, identified cultural resource site boundaries and historic structures that are eligible to the National Register of Historic Places (NRHP) should be avoided. If these sites and structures cannot be avoided, efforts to minimize effects should be implemented. One unevaluated structure within the Project Study Area will require evaluation under the NRHP. A Class III intensive

cultural resource survey is recommended by the South Dakota State Historic Preservation Office (SHPO) (SARC 2023) and would be conducted for projects having the potential to impact areas not previously disturbed. Minimization methodologies, if needed, would be determined as the Project progresses. Consultation with SHPO would occur during the NEPA process to determine the effect to historical or cultural resources.

## SECTION 4(F) AND SECTION 6(F) RESOURCES

Section 4(f) of the U.S. Department of Transportation (USDOT) Act of 1966 provides protection to publicly owned parks, recreation areas (including recreational trails), wildlife or wildfowl refuges, or any publicly or privately-owned historic site listed or eligible for listing on the NRHP. Section 4(f) only applies to USDOT agencies. Compared to the many procedural environmental laws that apply to federal highway actions, Section 4(f) is a substantive law that precludes project approval if there is a use of a Section 4(f) property when a prudent and feasible avoidance alternative is available.

Some park and recreational resources are also regulated under the Land and Water Conservation Fund (LWCF) Act of 1965, which established a federal funding program to assist states in developing outdoor recreation sites. Section 6(f) of the LWCF ensures that a recreational area funded with LWCF assistance is continually maintained in public outdoor recreation use unless the National Park Service (NPS) approves the conversion in accordance with the Statewide Comprehensive Outdoor Recreation Plan (SCORP) (36 CFR 59.3). When a Section 6(f) land conversion is proposed for a highway project, replacement land will be necessary. Coordination for Section 6(f) projects is completed with the SDGFP Grants Coordinator. SDGFP will consult with the NPS Midwest Regional Director or designee for a determination on the potential impacts on Section 6(f) properties and replacement properties.

### Methodology

The SDGFP Environmental Review Tool was utilized to determine the presence of publicly owned parks, recreation areas or trail systems, wildlife or waterfowl refuges, game production areas, and easements managed by the Natural Resources Conservation Service or USFWS (SDGFP 2022b). The results of the SARC Level I record search were utilized to determine the presence of any known publicly or privately owned historic sites (SARC 2023). Coordination with the SDGFP Section 6(f) coordinator was conducted to determine if any Section 6(f) properties are within the Project Study Area.

### Existing Conditions

#### Section 4(f)

The Voelker 1 Waterfowl Production Area (WPA) is located south of SD 38, east of Humboldt. Refer to **Figure 5b**. The WPA is federal property managed by the USFWS Madison Wetland Management District. The WPA is located in Section 14, Township 102 North, Range 52 West, south of SD 38. Signs designating the boundary of the WPA are located along the property boundary, and the property includes the inactive railroad grade of the Chicago & Northwestern Railroad from the 258<sup>th</sup> Street intersection of SD 38, west to 459<sup>th</sup> Avenue. The WPA boundary on the south side of SD 38 has a barbed wire fence present. There are no USFWS or Natural Resource Conservation Service (NRCS) easement areas present within the Project Study Area (SDGFP 2022b).

The Hartford City Park is on the southwest side of SD 38 across from the Central Valley Golf Course. The recreational opportunities within Hartford include the City Park, a swimming pool, baseball diamonds, softball diamonds, tennis courts, swings, slides, picnic shelters, basketball court, restrooms, and changing rooms. Refer to **Figure 5g** and **5h**.

The Central Valley Golf Course is present within Section 22, Township 102 North, Range 51 West in the Project Study Area (County Office 2023). The golf course is owned and operated by All In Golf, LLC and is open to the public. Refer to **Figure 5g** and **5h**.

One recreational facility, the Michael J. Fitzmaurice Trail, parallels the north side of SD 38 from the intersection of SD 38 and E. 2<sup>nd</sup> Street in Hartford, extending 1.5 miles east to the intersection with Crestview Drive in the Hartford Hights Addition residential development east of Hartford.

The Sioux Falls MPO Bicycle Plan identified SD 38 as a roadway that provides connectivity and identified key intersections along SD 38 such as Colton Road, Mickelson Road, and I-90 to 463<sup>rd</sup> Avenue (Western Avenue, Hartford) that need capacity improvements (MPO 2020) for recreation. Section 4(f) applies only when the land is publicly owned land and the public agency that owns the property has formally designated and determined it to be significant for a park, recreation area, or wildlife and waterfowl refuge. The future planned bike route is not currently considered a Section 4(f) property as it is not presently publicly owned or formally designated.

The state of South Dakota owns a 54.39-acre parcel of land at the far eastern end of the Project Study Area, northwest of the intersection of SD 38 and Marion Road. Regional offices for the SDDOT and the SDGFP are located on this parcel; this land is not being used for a park or other recreational activity.

Several listed, eligible, and unevaluated historical resources are present within the Project Study Area. These resources have been previously addressed in the *Cultural Resources Existing Conditions* section above.

## Section 6(f)

There are currently no Section 6(f) properties within or adjacent to the Project Study Area. Coordination with SDGFP noted that the Hartford City Park is encumbered with Section 6(f) funds, but a buffer exists between the park and the highway (SDGFP 2023).

## Next Steps

The No Build Alternative would have no effect on Section 4(f) or Section 6(f) resources.

As projects identified during this study progress, coordination will occur to confirm the 4(f) or 6(f) resources noted above and check for any additional resources that may have been developed or added since the writing of this document. During preliminary and final design of each project, avoidance or impacts of the resources will be considered. The current Section 4(f) resources present in the Project Study Area include the pedestrian trail, the WPA, and the previously evaluated eligible sites and historical structures.

At the implementation of any upcoming projects in the corridor, the future bike trails would need to be reviewed to determine their status as 4(f) resources. Currently, future trails do not qualify as Section 4(f) resources. If the 4(f) resources cannot be avoided, coordination would occur to determine the use of the resource between the agency of jurisdiction, SDDOT, and FHWA.

## PALEONTOLOGICAL RESOURCES

Paleontological resources are the fossilized remains of prehistoric plant and animal organisms, as well as the mineralized impressions (trace fossils) left as indirect evidence of the form and activity of such organisms. These non-renewable resources may be scientifically significant.

## Methodology

A paleontological survey is not necessary as part of this study. There are no laws within South Dakota requiring the review of paleontological resources as a part of the NEPA process. During the coordination process, if a comment from a federal land managing agency is received, paleontological resources should be considered. Additionally, paleontological resources must be considered if they are identified as components of cultural resources or Traditional Cultural Properties (TCPs).

## Existing Conditions

The NEPA Study Area lies in an area formed by the Precambrian period, the earliest part of Earth's history, spanning 4,000 to 543 million years ago. Two exposures of Precambrian rocks exist within South Dakota, one found in the Black Hills, and one found in the eastern part of the state, comprising the Sioux Arch. The Sioux Arch consists of metamorphosed sandstone and claystone deposited in a shallow sea. Catlinite, a type of claystone, was mined by Native Americans and used to make ceremonial pipes and figurines. Due to the metamorphic nature of these rocks, no fossils have been found within them (Paleontological Portal 2023).

The Project Study Area does contain federal land, the Voelker I WPA, managed by the USFWS Madison Wetland Management District.

## Next Steps

The No Build Alternative would have no effect on paleontological resources.

As projects identified during this study progress, additional paleontological resource coordination may be needed due to a federal land managing agency owning property within the Project Study Area.

## LAND USE AND ECONOMIC RESOURCES

Land use affects the quality of life and environment of the community. Land use designations often include zoning, future land use and growth management areas, conservation easements, urban infrastructure service boundaries, and annexation plans, as well as past, existing, and future development trends. Incorporating current and future land use and forecasting land use and trends are a key consideration in transportation planning, design, and construction.

Economic resources consider the business trends within an area. These resources are complemented by depictions and descriptions of current and future land uses that provide an understanding of areas of economic growth.

## Methodology

A review was conducted of existing and proposed land use in the NEPA Study Area and any anticipated changes in land use utilizing available information including planning documents, zoning maps, master plans, US Geological Survey (USGS) topographical maps, and GIS data, for Hartford, Humboldt, Sioux Falls, and Minnehaha County. The specific planning documents utilized included:

- **Humboldt Comprehensive Plan 2003 – 2025.** In 2003, the plan was completed to accomplish three main goals: to ensure the health and safety of citizens, protect natural resources, and enhance the visual quality of the community.
- **Minnehaha County Zoning Map (2012).** This zoning map was configured in 2012 to designate land use zones for Minnehaha County. The map was included in the Envision 2035

Comprehensive Plan. Land use zoning categories shown on the map are accurate as of the date of this report. Updated information can be attained by contacting the Minnehaha County Planning and Zoning, GIS Department.

- **Envision 2035 Comprehensive Plan (2015).** Minnehaha County adopted this plan for the purpose of protecting and guiding the physical, social, economic, and environmental development of the county; to protect the tax base; to encourage a distribution of population or mode of land utilization that will facilitate the economical and adequate provisions of transportation, roads, water supply, drainage, sanitation, education, recreation, or other public requirements to lessen governmental expenditure; and to conserve and develop natural resources.
- **Shape Sioux Falls 2040 Comprehensive Plan (2016).** Updates to the plan were completed in 2019 and 2022 to accommodate maps for development areas, sanitary availability, water and roads, drainage, and future land uses.
- **Hartford Comprehensive Plan 2017-2037.** In 2017, the plan was completed to accomplish two primary purposes: One, to address the planning requirements of state law while also providing a sound and logical basis for city growth and management strategies, and two, to provide predictability about the potential land uses and timing of development. This strategy would allow both public and private sectors to make informed decisions in real estate and capital investments.
- **Go Sioux Falls Long Range Transportation Plan (2020).** The plan would guide transportation planning activities and strategies to shape the greater Sioux Falls region's transportation network.

## Existing Conditions

Land uses zoned within Minnehaha County have been grouped into five broad categories: farm/agricultural, commercial/industrial, rural residential, developed, and recreation/conservation (Minnehaha County 2012). The Humboldt, Hartford, and Sioux Falls comprehensive plans have designated zoning and land use information, described more in detail below.

- Farm/agricultural land use areas were mentioned in all the comprehensive plans and are located outside of the city limits of Humboldt, Hartford, and Sioux Falls. Primary uses in these designated areas are mainly cultivated crops, pasture, or hay land.
- Residential areas were discussed in the Humboldt, Hartford, and Sioux Falls comprehensive plans and are found within the cities themselves and scattered throughout the SD 38 corridor.
- Humboldt's Comprehensive Plan evaluated urban land use, including industrial, commercial, single-family residential, multi-family residential, institutional and governmental, transportation and utility, conservation and recreation, and agricultural.
- Hartford's Comprehensive Plan evaluated land uses, including industrial, commercial, mixed-use, residential, multi-family residential, manufactured housing, institutional, parks, recreation and open space, and vacant.
- Hartford was planning a future Wastewater Treatment Facility (WWTF) along SD 38 east of Hartford; this facility is currently under construction and is anticipated to be operational by July 2025.
- Sioux Falls Comprehensive Plan evaluated land uses including single-family, multi-family, office/institutional, commercial, industrial, mining/airport, open space, agriculture, serviceable lots, and other uses.

Industrial use zoning is present near Hartford and Sioux Falls, including:

- Buffalo Ridge Ghost Town and Country Store, ANCO Underground, Cemcast pipe and Precast, and Meyer Truck and Trailer located south of Exit 390 on SD 38.

Commercial areas and businesses present along the Project Study Area corridor are identified in **Table 12**. These businesses utilize SD 38 as a critical east/west route for transport of goods and access for customers.

**Table 12. List of Businesses within the NEPA Study Area**

<b>Name</b>	<b>Business Type</b>	<b>Name</b>	<b>Business Type</b>
Siemonsma Electric LLC	Construction Company	Grocott Ink and Thread	Custom Clothing

A review of USFWS easements was conducted. Although there are easements present in the NEPA Study Area, no easements were present within the Project Study Area at the time of the writing of this document. The Voelker I WPA, owned in fee title by the USFWS, is located south of SD 38 in Section 14, Township 102 North, Range 52 West, east of Humboldt.

## Future Land Use

As development continues in the area, land use will transition from rural to urban. The Minnehaha County 2035 Future Land Use Map anticipates that transition areas in Minnehaha County would have the primary purpose of maintaining the rural landscape until the eventual development of residential and/or municipal development (Minnehaha County 2015). The transition areas extend out from Sioux Falls, Hartford, and Harrisburg within the NEPA Study Area. The 2020 Census recorded a population of 197,214 and the 2024 estimated population of the county is 213,824. Large scale farming will still be permitted, but additional consideration should be given to types of agriculture such as large, concentrated animal feeding operations and agribusinesses to ensure that large investments are not made in areas of impending development (Minnehaha County 2015).

The Sioux Falls MPO boundary displays two growth areas, Sioux Falls and Hartford, within the NEPA Study Area. Transportation and availability of utilities have significant effects on growth. Within the Sioux Falls Growth Area, Shape Sioux Falls (2016) noted the area as transition from agricultural to urban. This transition has started to occur with construction of residential, commercial, and industrial areas. The interstate exit for Hartford is a prime location for business development due to the ease of access and close proximity to Sioux Falls (Minnehaha County 2015). Recreation and conservation zoned areas are planned for the future along Skunk Creek, south of SD 38 (Minnehaha County 2012). Future land use, development areas and growth areas are shown in **Figure 6**.

Hartford is starting to grow to the east, but elevations of the existing sanitary sewer collection system will not allow further expansion due to the existing topography (City of Hartford 2017). The Hartford Future Land Use map indicates development of commercial, industrial, parks and open space, and residential/rural growth areas surrounding Hartford (City of Hartford 2017). The Hartford WWTF is

under construction southwest of the SD 38 and I-90 interchange in Section 25, Township 102 North, Range 51 West. The WWTF will include, sewage lagoons, manholes, outlet pipes and influent force main crossing north across I-90. Future land use, development areas and growth areas are shown in **Figure 6**.

Humboldt's comprehensive plan contains a growth management strategy composed of goals and objectives. The goals and objectives encourage development and redevelopment within the existing city limits, direct new growth into designated future growth areas, construct and upgrade the major street system to handle new growth, improve community services for all residents of Humboldt, and preserve the function and character of the rural area (City of Humboldt 2003). The City of Humboldt's Future Land Use Map displays the development of residential growth areas, commercial areas, and industrial growth areas. Future land use, development areas and growth areas are shown in **Figure 6**.

## Next Steps

The No Build Alternative is not consistent with land use plans; the acceptable LOS within the SD 38 corridor would not be maintained.

Development would be dependent upon the availability of utilities, resulting in a shift to urban land use resulting in higher traffic volumes. From this initial screening, Alternative 3 for the mainline corridor improvements and interchange improvements is consistent with the land use and economic growth in the area. Each project identified from the alternatives pulled forward for the mainline and interchange would be reviewed to determine if consistent with land use plans and economic growth patterns.

Construction of identified projects would cause traffic disruptions to residences and businesses along the corridor. Since there are no other means of access other than by SD 38, access to businesses and residences along the corridor would need to be considered during preliminary and final design. Businesses and residents along the route should be notified about construction activities in advance.

## COMMUNITY AND SOCIAL RESOURCES

Transportation provides mobility and access for the daily activities of a community. As such, major changes to the transportation system may affect the various aspects of a community. The magnitude of the projected change is evaluated for each of the following social characteristics: population, public services and facilities, community character and cohesion, and traffic circulation.

### Methodology

A desktop review and field reconnaissance were conducted to review the communities and resources present within the communities. In addition, the Sioux Falls traffic model and traffic analysis completed for the study were reviewed. A review of the traffic patterns for school districts, recreational areas, churches, emergency services, and rural residential areas was completed. A review for community cohesion was completed and considered the changes that would be beneficial or adverse such as splitting neighborhoods, generating new development, or separating residents from community facilities.

### Existing Conditions

The majority of the population in Minnehaha County is concentrated in Sioux Falls, with over 90 percent of the total county population residing in the municipality. In a 2015 planning document, *Moving*

*Forward, Planning Ahead, Envision 2035*, it was projected that by the year 2035, the population of Minnehaha County would grow over 207,000; the projected population in 2024 is over 217,000. (Minnehaha County 2015). Between the years 2000 and 2010, Hartford had a population growth of 37 percent, growing from 1,844 to 2,534 with a population of 2,965 in 2015 (City of Hartford 2017), and a population of 3,359 in 2020, a 32.5 percent growth. Population growth in Hartford is the result of natural increase and net in-migration. Net in-migration occurs with the number of people moving into the community is larger than those leaving. Humboldt's population increased 11.3 percent from 1990 to 2000 from approximately 468 to 521 residents and is projected to have a population between 613 and 654 by the year 2025 (City of Humboldt 2003).

The NEPA Study Area crosses two school districts: the Sioux Falls School District and the West Central School District which encompasses Hartford, Humboldt, and the surrounding rural communities. The SD 38 corridor provides bus transportation routes for students of each district. The corridor also provides access for other public services such as emergency response vehicles, fire departments and police. Minnehaha County is served by thirteen volunteer fire departments and one full-time fire department within Sioux Falls (Minnehaha County 2015). Both Hartford and Humboldt have fire departments that serve the towns and rural communities. The City of Humboldt contracts with the Minnehaha County Sheriff's Office for its police services (Town of Humboldt 2023). The Minnehaha County Sheriff's office covers Minnehaha County including city limits where the individual cities do not maintain their own police services. The City of Hartford has its own police department that covers the Hartford city limits and the Sioux Falls Police Department covers the area within the Sioux Falls city limits.

SD 38 provides connectivity between the three municipalities of Hartford, Humboldt, and Sioux Falls, and direct access to several rural residential communities and destinations. Between Hartford and Sioux Falls there are two residential communities with direct access from SD 38 that do not associate with either city; the Hartford Heights Addition and Songbird Acres Addition. The Central Valley Golf Course lies in northeast Hartford directly adjacent to SD 38. A recreational racetrack, the I-90 Speedway, is accessed directly off SD 38 between Hartford and Humboldt. SD 38 also provides indirect access to recreational opportunities including city parks, baseball fields, and nature trails in both Hartford and Humboldt.

## Next Steps

The No Build Alternative would not address the future decrease in LOS, therefore traffic would experience delays and increase safety concerns. The No Build Alternative would affect the connectivity of the communities and direct and indirect access to residential, business, and commercial areas.

Alternative 3 provides intersection improvements along the SD 38 corridor. Traffic numbers are projected to increase, and the proposed alignment would include but is not limited to additional lanes and roadway reconfigurations that will allow for a perpendicular entrance onto SD 38. A median would need to be incorporated for safety. The addition of lanes with a raised median may have a moderate effect to the traveling public due to the potential inability to directly drive in a wanted direction; a raised median may prohibit this action, forcing a commute to the next available turn-around intersection. However, the lanes, median, and perpendicular entrances would improve safety and accommodate traffic, having a benefit to the community and the traveling public. Alternative 3 would need to be evaluated with current social conditions and community settings.

The preferred interchange options allow for intersection configurations that would allow for a safer entrance onto SD 38 from I-90. Options for the interchange improvements adjust the lengths and skews of the interchange ramps for ease of use for vehicles using the interchange. The preferred options for the interchange improvement would need to be evaluated with current social conditions and community

settings.

## TITLE VI/ENVIRONMENTAL JUSTICE

In compliance with EO 12898, SDDOT is required to reach out to minority and low-income populations with meaningful and expanded processes during transportation projects funded by FHWA. This EO requires federal agencies to achieve environmental justice by identifying and addressing disproportionately high and adverse human health or environmental effects, including the interrelated social and economic effects of their programs, policies, and activities, on minority populations and low-income populations in the United States.

### Methodology

The methodology for this study addressed the methods for determining minority, people in poverty, vulnerable age, and Limited English Proficiency (LEP) populations. In accordance with U.S. Department of Transportation (DOT) Order 5610.2(A) and FHWA Order 6640.23A, a minority is defined as:

- Black: a person having origins in any of the black racial groups of Africa;
- Hispanic or Latino: a person of Mexican, Puerto Rican, Cuban, Central or South American, or other Spanish culture or origin, regardless of race;
- Asian American: a person having origins in any of the original peoples of the Far East, Southeast Asia, or the Indian subcontinent;
- American Indian and Alaskan Native: a person having origins in any of the original people of North America, South America (including Central America), and who maintains cultural identification through tribal affiliation or community recognition; or
- Native Hawaiian and Other Pacific Islander: a person having origins in any of the original peoples of Hawaii, Guam, Samoa, or other Pacific Islands (FHWA June 14, 2012).

DOT and FHWA do not define children or elderly; the U.S. Census definitions of children and elderly are used in this study. Children are defined as age 17 years and under; elderly are defined as age 65 years and above.

DOT and FHWA define low-income as:

- A person whose median household income is at or below the Department of Health and Human Services (HHS) poverty guidelines. Poverty guidelines are a simplification of the poverty thresholds for administrative purposes—for instance, determining financial eligibility for certain federal programs. Poverty thresholds are used mainly for statistical purposes—for instance, preparing estimates of the number of Americans in poverty each year. Poverty population data are calculated using the poverty thresholds, not the guidelines.
- A low-income population is defined as any readily identifiable group of low-income persons who live in geographic proximity, and, if circumstances warrant, geographically dispersed and transient persons (such as migrant workers or Native Americans) who will be similarly affected by a proposed FHWA program, policy, or activity (FHWA June 14, 2012).

DOT defines LEP as individuals for whom English is not their primary language who have a limited ability to read, write, speak, or understand English.

The scale of the U.S. Census Bureau cartographic boundary files for which demographic and socioeconomic data are tracked allows for a two-tiered approach to the analysis at various scales. The 2020 Decennial U.S. Census was analyzed to determine the characteristics (minority, and age) of the

population in NEPA Study Area. Data were analyzed to the smallest geographic unit available, the Census block, for minorities and vulnerable ages. The U.S. Census block boundaries are generally small and confined to neighborhoods, and for this reason, the level of analysis for minority and vulnerable age populations was focused on just those census blocks near the NEPA Study Area.

The American Community Survey (ACS), an ongoing survey conducted by the U.S. Census Bureau, compiles income and language data annually. The smallest geographical unit available for ACS data is the Census block group. Data for income were collected for the Project Study Area using 5-year averages (2016 to 2020) at the block group level while LEP household data were gathered at census tract geographic units.

In accordance with FHWA Order 6640.23A, any readily identifiable group of minority or low-income persons who live in geographic proximity, and, if circumstances warrant, geographically dispersed/transient persons (such as migrant workers or Native Americans) who will be similarly affected by a proposed FHWA program, policy, or activity were identified. The population characteristics (minority, age, language spoken, and income) of the NEPA Study Area were compared to the characteristics of Minnehaha County to determine if there are substantial populations of minority, vulnerable age, LEP, or low-income residents.

FHWA defines a disproportionately high and adverse effect on minority and/or low-income populations as an adverse effect that:

- is predominately borne by a minority population and/or a low-income population, or
- would be suffered by the minority population and/or low-income population and is appreciably more severe or greater in magnitude than the adverse effect that would be suffered by the non-minority population and/or non-low-income population (FHWA, June 14, 2012).

FHWA Order 6640.23A does not define “any readily identifiable group.” Guidance developed by the Council on Environmental Quality (CEQ), who along with the US Environmental Protection Agency (EPA), has oversight responsibility for implementing EO 12898, identifies a minority and people in poverty populations when:

- The percentage of minorities or low-income residents, respectively, exceeds 50 percent of the population in the area affected by the Project, or
- The minority population percentage of the affected area is meaningfully (or substantially) greater than the minority population percentage in the general population or other appropriate unit of geographic analysis (CEQ, December 10, 1997).

FHWA Order 6640.23A and other FHWA guidance do not use the term “meaningfully greater.” FHWA only uses the term “readily identifiable group” with regard to identifying a minority and/or low-income population. Based on CEQ and FHWA guidance, a two-step process was used to identify minority, low-income, and/or vulnerable age populations in the NEPA Study Area:

- Minority, low-income, and vulnerable age populations were initially evaluated to determine if the percentage of the population in the NEPA Study Area exceeds 50 percent of the total population.
- Minority, low-income, and vulnerable age populations were also evaluated by comparing their percentage in the NEPA Study Area to the percentage in Minnehaha County to determine if the minority, low-income, and/or vulnerable age populations in the NEPA Study Area are high and/or disproportionately greater than the same populations in the surrounding region. The NEPA Study Area was further analyzed at the Census block group and block levels to determine the distribution of any minority, low-income, and vulnerable age populations within the NEPA Study Area. Census block groups and blocks were determined to contain “substantial” minority, low-income, and vulnerable age populations if any of these populations

exhibited concentrations that were at least 40 percent higher than Minnehaha County's percentage of the same minority, low-income, and vulnerable age population. A 40 percent threshold represents a rounded value that is approximately the population within one standard deviation (34 percent) from the mean of a typical normal bell shape distribution curve.

## Existing Conditions

Based on the U.S. Census blocks, 11,780 people lived in the U.S. Census blocks that intersect the NEPA Study Area in 2020 (USCB 2022). This estimate includes all people living within the Census block boundaries that intersect the NEPA Study Area, including adjacent neighborhoods to the Project that lie outside the NEPA Study Area boundary. Refer to **Table 13**.

Following the previously noted two-step process, no environmental justice or Title IV populations were present above 50 percent of the total populations. Environmental justice or Title IV populations were also not present above the 40 percent threshold in comparison to Minnehaha County. There were no meaningful or substantial populations of low-income, minority, age related, or below poverty populations identified within the NEPA Study Area.

## Next Steps

The No Build Alternative would have no effect on environmental justice.

Currently, there are no meaningful or substantial environmental justice populations within the NEPA Study Area based off the 2020 census information. If a project occurs in the future and the new decennial census information of 2030 can be utilized, the presence of environmental justice populations should be reviewed. Otherwise, no further next steps are recommended.

**Table 13. Census Data Comparisons**

Census Parameter	Minnehaha County <sup>1</sup>	Threshold to Determine Population	NEPA Study Area <sup>2,3</sup>
Population	199,685	-	11,780
White	85.3%	-	90.4%
Hispanic/Latino	5.6%	7.8%	0.3%
Black/African American	6.6%	9.2%	0.02%
Asian	2.2%	3.1%	0.005%
American Indian/Alaskan Native	3.1%	4.3%	0.1%
Persons in Poverty	9.5%	13.3%	1.9%
Language other than English Spoken at Home	9.3%	13.0%	1.6%
Under Age 5	7.1%	9.9%	7.5%
Over Age 65	13.7%	19.2%	11.8%

## CLIMATE CHANGE/EQUITY

Climate change refers to long-term changes in temperature, precipitation, wind patterns, and other elements of the earth's climate system. Extreme weather or environmental conditions can pose threats to transportation infrastructure and those that depend on it by damaging infrastructure, disrupting transportation services, and creating safety risks for travelers. Temperature changes can cause pavement buckling, and increased rainfall intensity can lead to flooding, erosion, and slide events that damage transportation infrastructure. Climate related changes can result in increased costs, decreased efficiencies, and reduced reliability of transportation services. Sustainability of transportation infrastructure addresses the current needs in consideration of future needs by balancing economic, environmental, and social values.

The EO on Advancing Racial Equity and Support for Underserved Communities Through the Federal Government (EO 13985) pursues a comprehensive approach to advancing equity for all, including individuals who have been historically underserved and adversely affected by persistent poverty or income inequality. An important area for focus is the disproportionate, adverse safety impacts that affect certain groups on our roadways.

### Methodology

Climatic variation was reviewed from available weather information from the National Oceanic and Atmospheric Administration (NOAA).

The determined environmental justice populations within the NEPA Study Area were reviewed in comparison to the climatic variation, and any notable patterns in extreme weather events which are indicative of climatic change.

### Existing Conditions

Weather, particularly precipitation, in the NEPA Study Area was reviewed. NOAA collects totals for inches of annual precipitation for Minnehaha County. In 2019, Minnehaha County recorded a record year for annual precipitation totaling 40.47 inches since 1895 (NOAA 2023). This led to a large-scale flooding that damaged residential homes and other property. Another high recent precipitation amounts includes 2018 with 37.52 inches (NOAA 2023).

No meaningful or substantial low-income, minority, age-related, or below poverty populations are present within the NEPA Study Area.

### Next Steps

The No Build Alternative would likely cause negative effects to the corridor due to climate change. Infrastructure would continue to age and be affected by extreme weather events, temperature fluctuations, and other climate related factors. Maintenance costs would likely rise as repairs to the aging infrastructure are completed.

To address potential issues caused by climate change, SDDOT can integrate climate change considerations into planning, design, construction, and maintenance practices. Infrastructure can be designed with climate resilience in mind, including utilization of materials and construction techniques that can withstand extreme weather conditions and temperature fluctuations. Regular maintenance and monitoring could be conducted to address climate-related damage in a timely manner, focusing on adequate drainage systems, erosion prevention, and pavement repairs. By incorporating climate

change considerations, SDDOT can build more resilient infrastructure, improve the safety and reliability of transportation systems, and mitigate the adverse impacts of climate change on mobility and connectivity.

The No Build Alternative will have no impact on equity.

Currently, there are no meaningful or substantial environmental justice populations within the NEPA Study Area based off the 2020 census information. If a specific project extends into the new decennial census information of 2030, then the presence of environmental justice populations should be reviewed. Otherwise, no further next steps are recommended.

## BICYCLE AND PEDESTRIAN FACILITIES

Bicycle and pedestrian facilities are important components in a community's transportation infrastructure. Promoting development of facilities for use by pedestrians and bicycles is important for consideration during transportation planning. Existing and planned bicycle and pedestrian facilities are summarized in this section.

### Methodology

A desktop review was conducted to identify existing pedestrian and bicycle facilities located within the NEPA Study Area and to determine the locations of existing sidewalks, pedestrian bridges, footpaths, bike routes, and designated trails. A review of planning documents was also completed to identify what areas are designated currently and in the future for bicyclists and pedestrian use. Planning documents reviewed included: Sioux Falls Bike Plan 2015, Hartford Comprehensive Plan 2017 - 2037, Humboldt Comprehensive Plan 2003 – 2025, and Sioux Falls Metropolitan Planning Organization (MPO) Bicycle Plan.

### Existing Conditions

Due to the primarily rural nature of the Project Study Area, paved and/or gravel shoulders serve as the primary opportunities for multi-modal users. SD 38 is identified to have decent pavement condition with approximately a 6-foot shoulder width from Hartford to SD 115. The on-street bike route is accommodating bicycle and pedestrian uses and was identified in the Sioux Falls MPO Bicycle Plan as providing connectivity from Hartford to Sioux Falls. Bike trails that parallel or intersect SD 38 are in the long-term, future trail category in the Sioux Falls Bike Plan. These trails are considered high-connectivity, low-comfort routes, due to the adequate, yet minimal shoulder width for users along a high-speed roadway (SFBP 2015). The following documents noted bicyclist and pedestrian trails:

- **Hartford Comprehensive Plan Parks and Open Space Map.** Within the Project Study Area, the plan and map discuss and display planning for future primary and secondary paths. This plan recommends expanding the existing bike path with consideration toward connection with the Sioux Falls System (City of Hartford 2017).
- **Humboldt Comprehensive Plan, Major Street Plan Map.** The plan and map discuss and display planning for future bike trails. In the southeast designated growth area of Humboldt, the implementation of a bike trail system along Interstate-90 is planned to act as a buffer between the interstate and residential development (City of Humboldt 2003).
- **MPO Bicycle Plan.** A future path was noted within the Project Study Area, exploring a bicycle trail connection from Hartford to the edge of Sioux Falls at either the west corridor, along Skunk Creek, or along another similar corridor (SFBP 2015).

Recommendations of the Sioux Falls MPO include roadway projects along SD 38 to improve bicycle and pedestrian accessibility between Sioux Falls and Hartford. Potential project locations include along Western Avenue from Mickelson Road to SD38, Western Avenue from SD38 to 258<sup>th</sup> Street, and a section line corridor next to the Sam Assam Development MPO, routing ¾ mile south of SD 38 (MPO 2020).

## Next Steps

The No Build Alternative would affect bicycle and pedestrian users along the corridor. As traffic levels increase, users of the SD 38 shoulder for biking or walking would experience a lower comfort route than currently exists. However, if warranted, bicycle and pedestrian facilities could be constructed independently of a project stemming from this corridor study.

As projects from Alternative 3 and the I-90 Exit 390 Interchange Options proceed, the need for and future of recreational bicycle and pedestrian trail systems would be considered and be consistent with planning documents to the extent possible. Any accommodation for pedestrian and bicycle connectivity would be considered and finalized in future projects.

## VISUAL RESOURCES AND AESTHETICS

Visual resources are the natural and cultural features of the landscape that define its aesthetic quality and form the overall impression, or visual character, of an area. Visual impacts can generally be defined in terms of the relationship between the area's physical characteristics, the presence and location of viewers, and the character and quality of the environment in which a project is located.

### Methodology

The Project Study Area was reviewed during the field reconnaissance for the characteristics of the viewshed for the SD 38 corridor. The reconnaissance noted land uses and the following landscape features that add to the visual character of the area:

- Residential (urban, suburban, rural) uses
- Commercial, industrial, and municipal uses
- Parks, recreational areas, and trails
- Water and natural resources
- Agricultural open space and undeveloped lands

### Existing Conditions

The NEPA and Project Study Areas overall occur in a largely rural area with agricultural uses dominating the landscape. The NEPA Study Area viewshed includes the SD 38 corridor and connecting roadways, residential areas including Humboldt, Hartford, and rural farmsteads, farm operations, and hobby farms. The landscape within the Project Study Area is primarily the SD 38 corridor, which traverses both urban and rural settings, passing rural residences and farmsteads with urbanization near the cities of such as Hartford, Humboldt, and Sioux Falls. Business and commercial areas are present within Hartford, Humboldt, Sioux Falls. One pedestrian trail is present along the north side of SD 38 between the Hartford Heights Addition and the City of Hartford. Additional pedestrian paths and sidewalks are present within the city limits of Hartford, Humboldt, and Sioux Falls.

## Next Steps

The No Build Alternative would have no effect on visual resources or aesthetics in the Project Study Area.

The visual character of the Project Study Area would experience negligible effects from Alternative 3 and the selected I-90 Exit 390 Interchange option since the SD 38 corridor is currently part of the viewshed. Changes to the visual resources along the SD 38 corridor would consist of modifications to the existing roadway and interchange. Overall, effects to the viewshed would be negligible. No additional visual resource analysis is needed for upcoming projects.

## PRIME AND UNIQUE FARMLANDS

Protecting farmland from conversion from agricultural use during the planning, construction, and maintenance of transportation projects is an important step in complying with the provisions of 7 CFR 658 et seq. Farmland Protection Policy Act (FPPA). In accordance with the FPPA, important farmland includes all land that is defined as prime, unique, or farmlands of statewide or local importance based on soil types. SDDOT identifies important farmland from currently published or interim soil survey maps and data produced and certified by the NRCS National Cooperative Soil Survey Program.

## Methodology

The NRCS Web Soil Survey was utilized to identify types of soil within the Project Study Area, including prime, unique, and statewide and locally important farmlands (NRCS 2023a).

## Existing Conditions

Multiple soil types exist within the Project Study Area. Refer to **Table 14** below for the soil name, acreage within the Project Study Area, and farmland designation (NRCS 2022b).

**Table 14. Soil Types and Farmland Designations within the Project Study Area**

Soil Map Unit Symbol, Name, and Slope	Acres in Study Area	Farmland Designation*
AcA – Alcester silty clay loam, 0 to 2 percent slopes	0.5	PF
Ba – Baltic silty clay loam, 0 to 1 percent slopes	14.1	None
Bb – Baltic silty clay loam, ponded	1.6	None
BeE – Betts-Ethan loams, 15 to 40 percent slopes	8.8	None
Cb – Chancellor silty clay loam, 0 to 2 percent slopes, frequently flooded	2.2	PF/D
Cc – Chancellor-Tetonka complex, 0 to 2 percent slopes	34.1	PF/D
Ch – Chaska loam, channeled, 0 to 3 percent slopes, frequently flooded	25.2	None
CsD – Crofton-Shindler complex, 9 to 15 percent slopes	12.1	None
Dd – Davison-Crossplain clay loams, 0 to 2 percent slopes	48.7	PF/D
DgC – Delmont-Talmo complex, 6 to 9 percent slopes	4.9	None
DmA – Dempster silt loam, 0 to 2 percent slopes	14.3	PF
DtB – Dempster-Talmo complex, 2 to 6 percent slopes	20.7	None
EaB – Egan-Ethan complex, 2 to 6 percent slopes	0.7	PF
EeB – Egan-Ethan-Trent complex, 1 to 6 percent slopes	204.9	PF
EfA – Egan-Trent silty clay loams, 0 to 2 percent slopes	12.0	PF
EgB – Egan-Wentworth-Trent complex, 2 to 6 percent slopes	30.6	PF
EtD – Ethan-Clamo loams, 9 to 15 percent slopes	23.7	None
EuC – Ethan-Egan complex, 6 to 9 percent slopes	112.8	SI

<b>Soil Map Unit Symbol, Name, and Slope</b>	<b>Acres in Study Area</b>	<b>Farmland Designation*</b>
HuA – Huntimer silty clay loam, 0 to 2 percent slopes	0.0	PF

\*PF=Prime Farmland, PF/D=Prime Farmland if Drained, PF/I=Prime Farmland if Irrigated, SI=Farmland of Statewide Importance

## Next Steps

The No Build Alternative will have no impacts on prime and unique farmlands.

Alternative 3 and the preferred improvements under the I-90 Exit 390 Interchange Options may impact prime farmland if ROW is needed. As the identified projects progress, the NRCS should be consulted to determine permanent impacts to soils with farmland designations. If needed, Form AD-1006, *Farmland Conversion Impact Rating*, would be completed for the specific project.

## AIR QUALITY

Protecting air quality in the planning, construction, and maintenance of transportation projects is an important step in complying with provisions of 42 USC 7401 et seq., the Clean Air Act (CAA). The SDDANR Air Quality Program is responsible for maintaining air quality levels in South Dakota. It is responsible for air quality levels that protect human health, safety and welfare, and the National Ambient Air Quality Standards (NAAQS) established through the CAA.

## Methodology

The most recent air quality assessment report (SDDANR 2020) was reviewed for levels of concern for particulate matter, ozone, nitrogen dioxide, lead, and carbon monoxide.

## Existing Conditions

Currently, background levels of all assessed factors are within the CAA parameters; all of South Dakota is in attainment with CAA standards.

## Next Steps

The No Build Alternative would have no impact on air quality.

Projects stemming from Alternative 3 and the preferred improvements under the I-90 Exit 390 Interchange Options are not anticipated to permanently impact air quality. The Project would be expected to have temporary local impacts to particulate levels (dust) during construction. Project specific analysis is not recommended due to the negligible effect to air quality.

## HAZARDOUS MATERIALS

Hazardous materials include substances or materials that have been determined by the EPA to be capable of posing an unreasonable risk to health, safety, or property. Hazardous materials may exist within the study area at facilities that generate, store, or dispose of these substances, or at locations of past releases of these substances. Examples of hazardous materials include asbestos, lead-based paint, heavy metals, dry-cleaning solvents, and petroleum hydrocarbons (e.g., gasoline and diesel fuels), all of which could be harmful to human health and the environment.

## Methodology

The SDDANR Tanks, Spills, and Environmental Events Map database was reviewed for registered aboveground and underground storage tanks, reported spill events, and any documented environmental events that may pose a risk or threat to the environment (SDDANR 2022).

## Existing Conditions

Twelve reported spill events were identified within the Project Study Area (SDDANR 2024). All reported spill events within the Project Study Area were either closed or have been assigned a “no further action” status.

Four active underground storage tanks are located within the Project Study Area (SDDANR 2024). One is located southwest of the intersection of SD38 and 457<sup>th</sup> Avenue/S. Ford Street in Humboldt at the former Town N’ Country gas station. Two active underground storage tanks are located within the City of Hartford; one at the Get N Go gas station and one at the Heart T Stop. The fourth active storage tank is located at the Buffalo Ridge Country Store.

The SDDANR Tanks, Spills and Environmental Events interactive map identified no above ground storage tanks, Tier I facilities, or Tier II facilities within the Project Study Area.

## Next Steps

The No Build Alternative will have no impact on hazardous materials.

Alternative 3 and the preferred improvements under the I-90 Exit 390 Interchange Options would largely utilize existing ROW and minimize soil disturbance to the extent necessary, thereby minimizing the potential for encountering hazardous materials.

Based on information currently available, projects that stem from this study would not likely impact or be impacted by hazardous materials. As future projects progress, an updated review of the SDDANR Tanks, Spills, and Environmental Events Map is recommended, along with SDDANR agency

coordination.

## NOISE

Noise from highway traffic and construction is an important environmental consideration in transportation projects. SDDOT applies 23 CFR 772 for noise analysis and abatement procedures.

Highway projects fall into three types in accordance with the SDDOT Noise and Analysis Abatement Guidance (SDDOT 2011):

- Type I projects are defined as federal-aid highway projects in a new location or the physical alteration of an existing highway that significantly changes either the horizontal or vertical alignment or increases the number of through-traffic lanes. Type I projects can also include new or altered weigh stations, rest stops, ride-share lots, or toll plazas. Noise analysis is not required for the No Build Alternative or other eliminated alternatives.
- Type II projects are defined as federal-aid highway projects for noise abatement on an existing highway. For a Type II project to be eligible for Federal-aid funding, the highway agency must develop and implement a Type II program in accordance with section 772.71. Type II programs are voluntary, and SDDOT has elected not to have a Type II program.
- Type III projects are defined as federal-aid highway projects that do not meet the classifications of a Type I or Type II project. Type III projects do not require a noise analysis.

## Methodology

For the purposes of this Environmental Screening Report, a full noise analysis study was not completed. A review to determine if an alternative would have additional through lanes or substantial horizontal or vertical alterations would be conducted as future projects are determined. If an alternative does have those components, then the proximity of the roadway alteration to noise receptors would be analyzed. A noise receptor is a discrete or representative location of a noise sensitive area. A substantial horizontal alteration is defined as one that halves the distance between the edge of the outermost through-traffic lane and the closest receptor between the existing condition and the future build condition. A substantial vertical alteration removes shielding, thereby exposing the line-of-site between the receptor and the traffic noise source (SDDOT 2011).

## Existing Conditions

Noise receptors within the Project Study Area include the residences and businesses within Humboldt and Hartford, farmsteads, rural residences, and developments along the SD 38 Corridor. Refer to **Appendix B** for specific receptor locations.

## Next Steps

Generally, a noise analysis is required for proposed projects that would physically alter an existing highway or increase the number of through-traffic lanes. If traffic noise impacts are identified and projected to increase with the incorporation of a future project in the study area, noise abatement measures may need to be evaluated for affected noise receptors.

The current design of Alternative 3 is not anticipated to require a noise analysis, either due to lack of

receptors or due to the distance of the proposed improvement not being half of the current distance to receptors. The preferred improvement of the I-90 Exit 390 Interchange Options include horizontal alteration of SD 38 at the I-90 interchange thus resulting in halving the distance to residential receptors. As projects move forward, the need for a noise analysis would be considered for each intersection and the proposed improvements to the I-90 interchange.

## RIGHT-OF-WAY, ACQUISITION, AND RELOCATION POTENTIAL

The potential for Right-of-Way (ROW), acquisition, and relocation impacts are described in this section to evaluate how property owners and tenants (e.g., residential, business, non-profit, farm, ranch) may be directly and indirectly impacted by proposed ROW acquisition and associated business and residential displacements and relocations. The impacts may occur as a result of acquisition of specific businesses and residences or through disruption of business activity and neighborhood/community interaction characteristics that result in relocations.

### Methodology

While specific ROW acquisitions or relocations are not finalized during this study, a desktop review was conducted to identify the existing ROW extents in comparison to the proposed improvements.

### Existing Conditions

The SD 38 transportation corridor has an existing ROW throughout the Project Study Area. The typical width of the ROW along SD 38 ranges from approximately 100-200 feet on each side of the roadway. Portions of the ROW may exceed 200 feet in locations of large intersections and at the I-90 interchange. I-90 also has an existing ROW in which distances were unknown during the writing of this screening report. It is important to note that the location of fences, or other physical features on property boundaries may not determine the exact location of the ROW.

### Next Steps

Alternative 3 and preferred improvements under the I-90 Exit 390 Interchange Options would require the acquisition of property within mainly agricultural land, pasture or row crops, and residences. Although the alternatives are anticipated to mostly be within the existing ROW acquisition is anticipated throughout the corridor. ROW acquisition amounts would later be determined during project design and development.

All ROW and relocation impacts would be mitigated in conformance with the Uniform Relocation Assistance and Real Property Acquisition Act (UA) of 1970, as amended by the Surface Transportation Assistance Act of 1987, and as codified in 49 Code of Federal Regulations (CFR) 24, effective April 1989. The SDDOT ROW program is responsible for acquiring the property necessary for highway purposes and performing services related to acquisition in accordance with the UA.

## UTILITIES

Aboveground and buried utilities within the Project Study Area are outlined in this section.

## Methodology

A field reconnaissance and desktop review were conducted to identify existing utilities in the area including, but not limited to, electric, gas, water, communication, and petroleum.

## Existing Conditions

There are multiple utility companies and associated infrastructure along, under, and above SD 38 and adjacent county roads. Minnehaha County is traversed by high voltage transmission lines and liquid/vapor transmission pipelines, including the Dakota Access Pipeline (DAPL), which crosses the Project Study Area 0.3 mile west of the intersection of SD 38 and 460<sup>th</sup> Avenue. Utility service infrastructure can be associated with the SD 38 ROW, which extends up to 150 feet from the road centerline, and/or other special setback requirements related to utility maintenance and safety (LCCP 2005). Above ground pedestals, poles, junction boxes, and utility markers were observed adjacent to SD 38 throughout the Project Study Area.

Utilities observed in the study area during the field reconnaissance included, but are not limited to:

- Brookings Telephone Company – Fiber Optic Cable
- CenturyLink – Cable
- DAPL-ETCO Operations Management, LLC. – Petroleum Pipeline (Photo Point 26)
- East River Electric Power Cooperative – Fiber Optic Cable
- Golden West Telecommunications – Fiber Optic Cable
- Humboldt Natural Gas Utilities – Natural Gas Pipeline
- ITC Telcom – Buried Fiber Route
- Lewis & Clark Regional Water System, Inc. – Water Pipeline
- MidAmerican Energy – Natural Gas Pipeline
- Midcontinent Cable - Fiber Optic Cable
- Minnehaha Community Water Corporation – Water Lines and Valves
- Northwestern Bell Telephone Company – Underground Cable
- Sioux Valley Energy – Power Cable
- Sioux Valley Telephone Company – Telephone/Communication
- Union Telephone Company – Fiber Optic Cable

## Next Steps

The Minnehaha County Planning Department should be contacted prior to any excavation, construction, or improvement activity to ensure that the Project would comply with Minnehaha County ordinance requirements.

Utility coordination would occur as part of the preliminary and final design of the identified projects that are part of Alternative 3 and the preferred improvements under the I-90 Exit 390 Interchange Options.

## RAILROAD CROSSINGS

There is one inactive railroad grade within the Project Study Area along SD 38; the tracks have been removed from the grade. The inactive railroad grade crosses SD 38 in Humboldt approximately 0.55 miles west of the Project Study Area. The grade parallels the south side of SD 38 in the Project Study Area until it exits the Project Study Area at 466<sup>th</sup> Avenue, where it heads south towards Sioux Falls.

## Methodology

The Federal Railroad Administration (FRA) maintains an inventory of crossings throughout the U.S. The FRA inventory indicates that there are 283 public and private highway/rail crossings within Minnehaha County (FRA 2023).

## Existing Conditions

No railroad crossings exist along SD 38 within the Project Study Area.

## Next Steps

The inactive railroad grade is listed as eligible on the NRHP. Measures to avoid impacts to the railroad grade should be implemented as projects progress.

## OTHER ISSUES

No other issues were identified during this Environmental Screening Report.

## REASONABLY FORESEEABLE EFFECTS

Reasonably foreseeable effects were considered within each resource section. Reasonably foreseeable actions must be advanced enough in the planning process that its implementation is likely. Reasonably foreseeable actions are not speculative, are likely to occur based on reliable sources, and are typically characterized in planning documents. The following are examples of the reasonably foreseeable effects:

- Water Resources - An increase in stormwater runoff may occur with changes to development and would need to be considered during final design. Pipe, culvert, and bridge structure sizing may need to be modified. Areas of floodplain, wetland, and stream corridors exist within the Project corridor and have the potential to be impacted by future improvement projects.
- Threatened or Endangered Species – Suitable habitat for the northern long-eared bat, Topeka shiner, and monarch butterfly exists in the Project Study Area. Coordination with USFWS would need to occur to determine specific project effects to species.
- Cultural Resources - A Level III survey would need to be completed in areas not previously disturbed to identify any historic structures or sites.
- Section 4(f) section notes the possibility of future trails qualifying as Section 4(f) resources; qualification will be dependent upon the progress of the completion of these trails during the timing of the Project.
- Land Use – Development and improvements of the SD 38 corridor would support future development in municipalities such as Hartford, Humbolt, and Sioux Falls. Future development between these municipalities is anticipated to continue due to the existing expansion of industrial, commercial and urban residential areas along the SD 38 corridor. Due to the future development along the SD 38 corridor, conversion of farmland and wildlife habitat could be anticipated. It is also likely that future land use planning and zoning may be reconfigured to accommodate developments and land use throughout the corridor.

## SUMMARY OF NEXT STEPS AND MITIGATION STRATEGIES

The following is a list of follow up items that are needed during the NEPA process for each identified project:

- Wetland field delineations
- Approved jurisdictional determination from USACE
- Section 404 permit with a Section 401 State Water Quality Certification
  - o Depending upon level of impact, wetland mitigation may be required. Wetland credits would be purchased from a private wetland bank or, if available, debited from the SDDOT Wetland Mitigation Bank
- SDDANR General Permit for Construction Activities
- Coordination with USFWS and SDGFP to determine effects to threatened and endangered species
  - o Concurrence of effects to these species is required from USFWS
- Level III Cultural Resources Survey
  - o Consultation with SHPO to determine the Project's effect determination
- Identification of Section 4(f) and 6(f) properties
  - o Determination of any temporary or permanent use of the properties
- Consideration of access to residences and businesses during final design
- Review of the final design to confirm consistency with land use plans and economic growth patterns
- Consider the need for and future of recreational bicycle and pedestrian trail systems during final design
- Updated review of the SDDANR Tanks, Spills, and Environmental Map database, along with SDDANR agency coordination
- Review the need to complete a noise analysis for intersection at 270<sup>th</sup> Street
  - o If needed, complete analysis according to the SDDOT Noise Policy
- Mitigation of all ROW and relocation impacts in conformance with the Uniform Relocation Assistance and Real Property Acquisition Act (UA) of 1970.

## STAKEHOLDER AND PUBLIC INVOLVEMENT

Two public meetings were held for the study and the following describes each.

### First Public Meeting- June 8, 2023

The first public meeting and open house was on June 8<sup>th</sup>, 2023, at the West Central High School in Hartford, SD, 705 E 2<sup>nd</sup> St, Hartford, SD 57033. Approximately 44 people were in attendance. The public meeting was designed to inform the public about the study and solicit input early in the process. Representatives from SDDOT, FHWA, Minnehaha County, the City of Hartford, City of Humboldt, and personnel from the consultant engineering teams, including HR Green and Banner Associates, Inc., were present. The representatives were available to answer questions, discuss the study, and receive community input on study needs and deficiencies. A looping PowerPoint presentation was available for attendee viewing. A video was made available on the website to provide information and generate questions on design, environmental, right-of-way, and access management which are typical for most highway projects. Comments were made to the Design Team by email, comment cards, website contact form, online survey, and online interactive map. All comments will be reviewed by the Design Team for consideration in the design process.

The meeting was advertised through the study website (<https://www.sd38corridorstudy.com/>) and through direct mailings to landowners and local officials in and immediately adjacent to the corridor.

A total of 13 comments were received through the interactive map comments, one comment was received through the website, five comments were received through comment cards, and 21 comments were written on the strip map that were displayed at the Public Meeting. The main concern raised in the comments received was the speed, amount of traffic, and safety along SD 38. Comments identified traffic speeds entering Hartford should be reduced as crossing SD 38 or turning onto SD 38 is difficult. Flooding and drainage issues were listed as a concern that it would be ensured residences along the corridor would not be affected. One comment was received regarding wildlife vehicle collisions along SD 38. Other comments regarding safety included discussion on traffic signals, roundabouts, signage, turn lanes, and truck clearance.

## Second Public Meeting- March 13<sup>th</sup>, 2024

The second public meeting and open house was on March 13<sup>th</sup>, 2024, at the West Central High School in Hartford, SD, 705 E 2<sup>nd</sup> St, Hartford, SD 57033. Approximately 30 people were in attendance. The public meeting was designed to inform the public about the study and solicit input early in the process. Representatives from SDDOT, FHWA, Minnehaha County, the City of Hartford, City of Humboldt, and personnel from the consultant engineering teams, including HR Green and Banner Associates, Inc., were present. The representatives were available to answer questions, discuss the study, and receive community input on study needs and deficiencies. A looping PowerPoint presentation was available for attendee viewing. A video was made available on the website to provide information and generate questions on design, environmental, right-of-way, and access management which are typical for most highway projects. Comments were made to the Design Team by email, comment cards, website contact form, online survey, and online interactive map. All comments will be reviewed by the Design Team for consideration in the design process.

The meeting was advertised through the study website (<https://www.sd38corridorstudy.com/>) and through direct mailings to landowners and local officials in and immediately adjacent to the corridor.

Twenty-one comments were received on the interactive map. Five handwritten comments and seven email comments were also received. The main concerns voiced at the public meeting were the median, a need for turn lanes at the racetrack, a speed limit reduction from the high school to the interstate, sight distance issues at the interchange, impacts to private driveways, acquisition of property, impacts to property values, changes in access locations, and impacts to businesses.

Throughout the course of the Project, all correspondence received from both public meetings was reviewed and logged. Comments submitted can be found in **Appendix C**.

## CONCLUSION

Alternative 3 and the interchange improvements carried forward under the I-90 Exit 390 Interchange Options met the purpose and need for the Project and were carried forward for environmental analysis within this report. Resources or items of concern were identified within the NEPA Study Area or Project Study Area, depending on which was appropriate for that resource. Both Alternative 3 and the preferred improvements under the I-90 Exit 390 Interchange Options are anticipated to have minimal impacts to environmental resources. Future NEPA documentation would include the next steps identified for compliance as projects move forward.

Due to the minimal impact, the projects identified within Alternative 3 and the selected improvements

carried forward under the I-90 Exit 390 Interchange Options are anticipated to require Categorical Exclusions for NEPA documentation.

SD Department of Transportation  
Public Meeting  
June 8<sup>th</sup>, 2023

NH 0042(80)371, Minnehaha County, PCN 06YP  
SD38 – From Humboldt to W of Marion Road in Sioux Falls  
Corridor Study

The Public Meeting was held at West Central High School in Hartford, SD on June 8<sup>th</sup>, 2023. A video was made available on the website to provide information and generate questions on design, environmental, right-of-way, and access management which are typical for most highway projects.

Comments were made to the Design Team by email, comment cards, website contact form, online survey, and online interactive map. All comments will be reviewed by the Design Team for consideration in the design process.

### **Overview of Interactive Map Comments Received**

All comments were submitted through the comment map on the Corridor Study's website. Their main concerns are speed, amount of traffic and safety. See attached for the Comment Map with location of these comments.

- Intersection of W North Street (Highway 38) and 456<sup>th</sup> Avenue (just west of Humboldt)
  - Submitted through interactive map (6/15/2023)
    - “Due to traffic coming from multiple directions at this intersection, consider an all-way stop, roundabout, or other traffic calming technique to improve safety.”
- Stretch of W North Street (Highway 38) between W 2<sup>nd</sup> Avenue and N Main Street in Humboldt
  - Submitted through interactive map (6/7/2023)
    - “Need to slow the speed down through town to 35 all the way west to 19”
- Stretch of Highway 38 between 460<sup>th</sup> Avenue and 259<sup>th</sup> Street
  - Submitted through interactive map (5/18/2023)
    - “Event traffic is a challenge for congestion”
- Highway 38 west of the intersection with Western Avenue (west of Hartford)

- Submitted through interactive map (6/15/2023)
    - “Traffic does not slow down coming into Hartford, making it difficult for multi-modal traffic to enter, exit, or cross Highway 38 at Western Avenue.”
- Intersection of Highway 38 and E Railroad Street/N Colton Road (east of West Central High School/Middle School in Hartford)
  - Submitted through interactive map (6/15/2023)
    - “The 90-degree-angle correction greatly improved safety at this intersection, but traffic on Highway 38 still creates safety concerns for cross traffic. Consider a traffic signal, roundabout, or other traffic calming technique at this intersection.”
- Intersection of Highway 38 and E Mickelson Road
  - Submitted through interactive map (6/15/2023)
    - “As development around this intersection continues to blossom, consider a traffic signal, roundabout, or other traffic calming technique to improve safety.”
  - Mark Heath (interactive map 6/7/2023)
    - “I have a safety concern. This intersection is very dangerous, especially for students attempting to turn west going to school at the same time commuters are driving east at 65+ mph. It will only get more difficult when the high density apartments are full. This is also dangerous when driving west on 38 from SF attempting to turn onto Mickelson. I feel like a sitting duck stopped on 38 hoping traffic behind me doesn’t rear end me at full speed.”
- Stretch of Highway 38 between Hartford and Interstate-90
  - Submitted through interactive map (6/15/2023)
    - “The speed limit of 65 MPH feels too fast for this stretch of Highway 38 near Hartford Heights, especially with the number and spacing of access points and the bike trail along the highway.”
- Highway 38 and Interstate-90 (east of Hartford)
  - Submitted through interactive map (6/5/2023)
    - “Traffic backs up here sometimes when cars are trying to enter I-90”
  - Submitted through interactive map (6/5/2023)
    - “Seeing cars coming east-bound (from Hartford) when exiting off the off-ramp into Hwy 38 is difficult.”
- Intersection of Highway 38 (West 60<sup>th</sup> Street) and N Ellis Road
  - Alysia Boysen (interactive map 6/26/2023)
    - “Add execution lanes at Ellis road so that traffic can safely merge onto hwy 38”

- West of the intersection of Highway 38 and N La Mesa Drive
  - Alysia Boysen (interactive map 6/26/2023)
    - “Flatten road so it is easier to see traffic heading East when turning off mesa.”
- West of the intersection of Highway 38/ West 60<sup>th</sup> Street and N Marion Road (Highway transitions from two-lane to four-lane)
  - Submitted through interactive map (6/5/2023)
    - “This four-lane section of hwy 38 is poorly lit up to the Marion Rd. intersection. This, combined with high speeds and a straight stretch of road all the way to the interstate makes the road ideal for racers and speeders. Many times I've witnessed cars blowing the red light at night, sometimes without headlights on or smoked-out headlights, making them difficult to see when making a legal crossing of hwy 38.”
- Intersection of West 54<sup>th</sup> Street and N Marion Road (south of Highway 38 and Marion Road intersection)
  - Submitted through interactive map (6/5/2023)
    - “Very difficult to see north-bound drivers on Marion Rd when trying to turn into Marion Rd from N 54th Street. There's a hill just south of Marion/N 54th that creates a very short sight-line. Perhaps a stop light is needed here?”
- Intersection of Highway 38/West 60<sup>th</sup> Street and North Career Avenue
  - Submitted through interactive map (6/5/2023)
    - “Stoplights are badly needed here. It's a large intersection and with development now north of Hwy 38. Vehicles tend to drive over 50mph on this road, so crossing hwy 38 is dangerous.”

## Overview of Comments Received through the Website

- Linda Lambeth (website contact form 6/13/2023)
  - “Please do not wait until these future projects begin to fix this major problem. I have requested often that speed limit east of Humboldt be reduced and there has been no change. We are 1302 E North St which is actually Hwy 38...1mile east of Humboldt. There are 8 additional residences in the mile into Humboldt and the current 65 mile speed limit (reduced to 55 just before Hwy 19 north) is toooooo fast. This is a popular crossing for deer from Beaver Lake to the north with many killed each year. It is dangerous at time pulling out of our driveway onto Hwy 38 with speeding vehicles coming from Humboldt. Please pass this on to whichever agency can fix this!”

## Overview of Comment Cards Received

All comments were from residents who attended the Public Meeting held on June 8<sup>th</sup>, 2023 at West Central High School in Humboldt. Their main concerns are speed and safety.

- Paul Dyke
  - “Right turn lane needed (heading west) at 468<sup>th</sup> St. intersection.”
- Joel Tews
  - “Hwy 38 and 19 intersection is very dangerous. Not sure what to do just an observation.”
- Rod Kramer
  - “Should be a sign that cross traffic doesn’t stop where Hwy 19 meets 38 by Friendly’s in Humboldt.”
- Brent Hoffman
  - “Many residents feel the north end of the I-90/Hwy 38 interchange is inherently unsafe, largely due to vehicles pulling onto Hwy 38 from the off-ramp but there are also concerns about vehicles approaching from the east because of the line of sight. If the road could be widened and lowered through there, it would improve visibility. There are similar concerns about the Hwy38 connection with Mickelson and some residents have suggested the roadway could be lowered and/or the curve smoothed out. Thanks for the opportunity to comment. Sen. Hoffman (D-9)”
- Peggy Hoogestraat
  - “I attended the June 8 meeting in Hartford and already left comments. Later, I was told by my son, Matt, who travels the corridor more than I, that a great concern for the neighborhood is the traffic entering and leaving the race track. Safety for all is so important. Thank you for involving the communities. Peggy”

## Overview of Comments on Strip Maps from the Public Meeting

All comments were written on the strip maps that were displayed at the Public Meeting held on June 8<sup>th</sup>, 2023 at West Central High School in Humboldt. Their main concerns are speed, amount of traffic and safety.

- SW corner of Hwy 38 and 457<sup>th</sup> Avenue—east of Humboldt
  - City Utility/Drainage work
- SE corner of Hwy 38 and 457<sup>th</sup> Avenue—east of Humboldt
  - Drains into back lot line ditch
- NE corner of Hwy 38 and Hwy 19—east of Humboldt
  - Truck cannot make turn (west bound from Hwy 38 turning north on Hwy 19)
- 459<sup>th</sup> Avenue south of Hwy 38
  - Curvy Road

- Mid-point between 459<sup>th</sup> Avenue and 460<sup>th</sup> Avenue along Hwy 38
  - Sight-line issues
  - Seasonal seed-sales business on the north side of Hwy 38
  - Drain tiles in the field to the south
  - Rural water utility line (east to west) approximately 2,500 ft south of Hwy 38
  - Approximately 1,700 ft west of 460<sup>th</sup> Avenue is a DAPL Access Easement
    - Field Access points near this easement
- Hwy 38 and 460<sup>th</sup> Avenue Intersection
  - Notes of crashes and to “check past crash data” to the west of the intersection.
  - 460<sup>th</sup> Avenue south of the intersection has the following note:
    - “Low to no maintenance road, difficult to drive on with equipment”
  - Field work and access at the intersection of 259<sup>th</sup> Street and 460<sup>th</sup> Avenue
  - “Field Work” notes along the west side of 460<sup>th</sup> Avenue (south of the Hwy 38 intersection)
- Intersection of Hwy 38 and 259<sup>th</sup> Street
  - Field work access
  - Illegible note
- Intersection of 258<sup>th</sup> Street and 463<sup>rd</sup> Avenue—north of Hartford
  - NW corner: carbon pipeline
- Approximately 3,200 feet west of Hwy 38 and Western Avenue intersection (west of Hartford)
  - “Carbon pipeline?”
- Hwy 38 and Western Avenue Intersection
  - “Trucks from Humbolt off @ Humbolt Ex to c of low clearance at Western/I90”
  - “Traffic increases as detour for interstate (I-90) when construction on I-90”
- 463<sup>rd</sup> Avenue/Western Avenue and I-90 Overpass
  - “Turbine/silo trucks cannot fit under this”
- Hartford
  - Hwy 39 and Vandemark Avenue
    - Daycare NW corner
    - Shopping center on NE corner
  - Freyder Avenue and 1<sup>st</sup> Street
    - Elementary School traffic
  - East of the intersection of Hwy 38 and Elm Road
    - “Now ROW take”
  - Hwy 38 and East 2<sup>nd</sup> Street intersection – Middle and High School
    - Need left or right turn lanes at this intersection
    - School and several access routes are denoted with arrows
    - Approximately 350 cars/day
      - Open campus at lunch
    - Bus route along 2<sup>nd</sup> Street
    - Crossing zone across Hwy 38 for students
    - NW bound traffic along Hwy 38 turning left into the school causes bottleneck

- East of Hartford
  - Hwy 38 and 260<sup>th</sup> Street intersection is circled—no note
    - New Addition going in north of existing lots on north side of intersection
      - Right turn lane?
    - Left turn lane along Hwy 38?
  - Stretch between 260<sup>th</sup> Street and 465<sup>th</sup> Avenue
    - “Put more speed limit signs. 65-not 52”
    - “Speed limit needs to be reviewed”
- Hwy 38 and 261<sup>st</sup> Street Intersection
- Note of “rear-end” with left turns Hwy 38 and Middle Drive
  - “Hard to see to turn off—have to wait. Crashed at this location”
- Hwy 38 and 261<sup>st</sup> Street Intersection
  - Note of “rear-end” with left turns
- Interstate 90 and Hwy 38
  - Dashes along the SW side of Hwy 38—no note
  - “Turbine/Silo trucks enter I90 here from Humboldt to go East”
  - “Turbine/Silo get off here to go west”
- NW of Interstate 90 and Hwy 38
  - Gravel yard—lots of large trucks
    - Add a turn lane for trucks
- Hwy 38 and 467<sup>th</sup> Street Intersection
  - “Speed limit needs to be reviewed”
- Hwy 38 and 468<sup>th</sup> Avenue Intersection
  - “Right turn lane needed” for west bound traffic turning north
- Hwy 38 and Pheasant Run Avenue Intersection
  - “Concern for LT safety”
  - Approximately 1,000 ft south of intersection “Bicentennial Homestead (1872)”

**See attached for summary of online survey results.**

SD 38 Corridor Study

4.If I could fix one thing about the Highway 38 corridor, it would be:

Response

- Lack of visibility at the exit near buffalo ridge
- The on ramp and off ramp of the first Hartford Exit on I-90.
- Exiting off I90 to 38 needs to be improved. Blind intersection cars pull out and drive 45mph instead of posted speed limit
- Turning lanes at all locations for high traffic areas.
- Need turning lane
- Turning west (right) onto Highway 38 from the I 90 westbound offramp is terrible. You basically have to guess if cars are coming or not. From 38 you often have to slam on the brakes for turning traffic
- The road condition
- Turn lanes
- Traffic calming through Hartford and Humboldt.
- More room to pass. Lot of semi-trucks and other slow moving vehicles obstruct lane visibility and make it unsafe to pass on many portions of SD 38
- The intersection of 38 and Mickelson needs to be redesigned. I feel very unsettled with my teenage drivers and the rest of the kids in our community using that intersection daily.
- Slow down thru humboldt
- Turn lane by mickelson Road
- Safety at Marion Rd and Hwy 38 and improve the on-/off-ramps at I-90 and Hwy 38.

Comments / Questions:

Many residents feel the north end of the I-90/Hwy 38 interchange  
is inherently unsafe, largely due to vehicles pulling onto Hwy 38 from the  
off-ramp but there are also concerns about vehicles approaching from the  
east because of the line of sight. If the road could be widened and  
lowered through there, it would improve visibility. There are similar  
concerns about the Hwy 38 connection with Mickelson and some residents  
have suggested the roadway could be lowered and/or the curve smoothed-  
out. Thanks for the opportunity to comment. Sen. Hoffman (D-9)

Comments / Questions:

[PhilG@InfrastructureDG.com](mailto:PhilG@InfrastructureDG.com)

I attended the June 8 meeting in Hartford and already left comments.  
Later, I was told by my son, Matt, who travels the corridor more  
than I, that a great concern for the neighborhood is the  
traffic entering & leaving the race track. Safety for all is so  
important.

Thank you for involving the communities.

Peggy

SD Department of Transportation  
Public Meeting  
March 13, 2024

NH 0042(80)371, Minnehaha County, PCN 06YP  
SD38 – From Humboldt to W of Marion Road in Sioux Falls  
Corridor Study

Individual stakeholder meetings followed a Public Meeting were held at West Central High School in Hartford, SD on March 13, 2024. A video was made available on the website to provide information and generate questions on design, environmental, right-of-way, and access management which are typical for most highway projects.

Comments were made to the Design Team by email, comment cards, website contact form, online survey, and online interactive map. Comments will be reviewed by the Design Team for consideration in the design process.

### **Overview of Interactive Map Comments Received**

Comments were submitted through the comment map on the Corridor Study's website. Their main concerns are speed, amount of traffic and safety.

- Intersection of Highway 38 and 261<sup>st</sup> St
  - Submitted through interactive map (2/29/24)
    - “Enough people live in this neighborhood to make a turn lane a good option. It is difficult to wait to turn in or out with traffic moving at 65+.”

### **Overview of Comment Cards Received**

Comments were from residents who attended the Public Meeting held on March 13, 2024 at West Central High School in Humboldt or watched the presentation on the project website. Their concerns are summarized as follows:

- a median stopping snow and having to make U-turns
- the need for turn lanes at the racetrack
- reducing the speed limit primarily from the high school east to the interchange
- intersection sight distance issues at the interchange
- keeping their existing driveway access and configuration

- concerns with a wider highway affecting private property, fencing, existing wells, farm operations, etc.
- concerns with property acquisition and/or reduction of property values, changes to access locations, medians restricting access, and affecting existing billboard's location or visibility

The handwritten comment cards have been re-written below.

- Jeanne Foster, 200 E. 5<sup>th</sup> Street, Crooks, SD 57020
  - "No Median – 3 lanes or 4 lanes ok along 38 between 468 Ave and Ellis Road. Need to be able to move farm equipment going both east and west on 38. There are a number of properties that would need to go east and west in this section. Median will stop snow on parts of this part of the road"
- Linda Hatle, 46735 SD Highway 38, Sioux Falls, SD 57107
  - "I'm not against a 4-lane road, just against not getting a turn lane to get into my driveway. Continuing to make a U-turn to me is going to be much more dangerous. In the winter when the plows have not cleared the roads good, I could possibly get stuck in the snow making a U-turn and get frost bitten trying to shovel any vehicle out of the snow. Also the snow will not be able to blow across due to a median and if there is a drift there will be no way to get around it. When pulling a long trailer into my yard, a U-turn will not be practical. I do not wish to drive further west to go home. I want and need a turn lane to my driveway! The state needs to consider property owners should have a right to have a lane to go home without driving further."
- Allan and Angelia Martens, 46061 SD Highway 38, Hartford, SD 57033
  - "Need a no passing zone between 460<sup>th</sup> & 461 Street. Also need a left and right turn lane for racetrack between 460 and 461<sup>st</sup> Street. Both for safety concerns."
- Mike and Jana Miles, 45570 258<sup>th</sup> St., Humboldt, SD 57035
  - We are landowners along Highway 38 on 45816 Hwy 38 which borders 258<sup>th</sup> Street near Humboldt, SD. I attended the afternoon meeting on March 13<sup>th</sup> in Sioux Falls and from what your plan shows you are wanting to take out our driveway access to Highway 38. We have managed this farm for 44 years and never had an issue with our access to Highway 38. We have been very grateful for this access because of the snow accumulation that this stretch of land creates in the winter. In the winter 258<sup>th</sup> street is not always plowed due to the extremely deep snow so this will create an issue if they were to merge our driveway to 258<sup>th</sup> street. We have a cattle operation that we need to access at least twice a day to monitor and feed cattle. Adding 500 feet to our driveway would be detrimental to our operation. I understand adding a curve on the gravel road on 258<sup>th</sup> would be a benefit for those traveling 258<sup>th</sup> street but extending our driveway to join it would not be a benefit to us. Our septic system runs right up to the edge of our property by the driveway and feedlot which would also create problems if disturbed. The best solution would be to leave the driveway access from 45816 Hwy 38 as is. Thank you, Mike and Jana Miles."

## Overview of Comments from the Public Meeting

Some comments were written on the strip maps that were displayed at the Public Meeting held on March 13, 2024, at West Central High School in Humboldt and other comments were made verbally to the staff at the public meeting. Their main concerns are speed, amount of traffic and safety.

1. No medians
2. Signal at Ellis Road – dangerous
3. Can we reduce speed?
  - a. DOT will be doing a speed study soon on the portion of SD Highway 38 from the high school to the interchange
4. Accidents near Dorothy Ave
5. Property owner potentially ok with median if frontage road connects his and his neighbor's driveways to a median cut location – near 476<sup>th</sup>
6. Buffalo Ridge property owner concerned with median
  - a. Most of his business comes from the west so needs a median cut for entrance into his property –  $\frac{3}{4}$  access shown in some options but not all
  - b. Does not want to lose any part of his land for interchange reconfiguration
7. City of Hartford
  - a. Sidewalk initiative planned for the next year
    - i. Discussion about timing of project through Hartford
      1. TA grant possibility to construct prior to project
        - a. Would help possibility of receiving a grant if city had a sidewalk plan in place
          - i. Working with SECOG to develop
      - ii. Would like to see a pedestrian connection from Humboldt to Hartford – especially for school
        1. Make it part of a plan and it will be easier to add to the project
    - b. Teresa Sidel will send pictures of new signage

- c. City of Hartford purchased land for new WWTP and does not want to give land up for interchange options
  - d. Concerns with access to City property on the north side of I-90 near the interchange
    - i. Existing access on west side of property – need to get across the creek to access the rest of the property
  - e. Mayor of Hartford does not favor roundabouts
  - f. Within Hartford, potentially shift the roadway north at the curve to avoid purchasing ROW for trail. Verify with final survey and ROW location.
8. Highway 19
- a. No proposed changes beyond the stop signs that were added last year. Still monitoring and adding additional signage as necessary.
9. Too many interchange options presented
10. Need a “No Passing Zone” between 460<sup>th</sup> and 461<sup>st</sup> Streets. Also need a left and right turn lane for the race track due to safety concerns.

## **Overview of Individual landowner/Stakeholder Meetings**

Two individual meetings were held with individual landowners and stakeholders following the public meeting. The first meeting was held via Zoom on March 25, 2024 with Wyatt Haines who lives at 25973 466<sup>th</sup> Avenue, just north of the Exit 390 interchange. Wyatt was also representing his neighboring property owners, the Melin family, and Haase family. Ben White and Phil Gundvaldson participated in the call and presented an overview of the project. Wyatt was primarily interested in interchange and how it may affect properties, the adjacent roadway network, and modify access. Wyatt was appreciative of the presentation and would like himself and other area landowners to be kept informed as the project progresses.

The second meeting was held in person at Hartford City Hall on April 3, 2024, with the City of Hartford and the Hartford Area Development Foundation (HADF). Ben White and Phil Gundvaldson participated in the presentation and started by playing the recorded presentation from the website. The various options for the mainline and interchange were presented and

discussed. The questions received were like those mentioned by others at the public meeting. The group was appreciative of the presentation and would like to be kept informed as the project progresses, particularly phases through Hartford and the interchange.

## AGENCY, STAKEHOLDER, AND PUBLIC MEETING SUMMARY

DATE	March 13, 2024
LOCATION	SDDOT Area Office; 5316 W 60 <sup>th</sup> Street N; Sioux Falls, SD 57107 (1-4 PM) West Central High School; 705 E 2 <sup>nd</sup> Street; Hartford, SD 57033 (5:30-7:30 PM)
PROJECT	SD 38 Corridor Study

### Stakeholder/Agency/Public Comments

#### [SAT Member Comment](#)

#### Common Questions/Concerns:

1. **Timing of Project**
2. **Impairment of access to residences/businesses with mainline improvements**
3. **Safety Improvements – speed limits, hill re-grading**
4. **Roundabouts**
5. **Property Encroachments**

---

#### **SDDOT Area Office; 5316 W 60<sup>th</sup> Street N; Sioux Falls, SD 57107 (1-4 PM)**

Questions were asked concerning the timing of the project.

- [SDDOT has a placeholder in 2031 for projects derived from this study](#)

Individual residing in the Songbird Development between Sioux Falls and Hartford

- Concerned with encroachment of land if the roadway widens to a 4-lane
- Safety – there are adjacent houses to the road already; these will become closer to the roadway if widened to a 4-lane
- Speed limit – should be 55mph for the entire route
- Why the changes to access points and the side roads?
  - o [Squaring up intersections for safety and truck traffic. Entry points preferred perpendicular to the roadway.](#)

Will there be a traffic signal on Tea/Ellis Road?

- o [Nothing is warranted for the near future, but this may need re-evaluation as traffic volumes increase](#)
- o [The City of Sioux Falls' long-term plan for Tea/Ellis Road is a 4-lane all the way through](#)

Center turn lane vs. concrete barrier median:

- Center turn lane would be preferred
  - o [Building a median would set the stage for future development and access points by limiting connections to SD 38. This would increase safety and reduce accidents.](#)

[Changes since the first 2023 agency/stakeholder/landowner meeting:](#)

- [Traffic analysis is complete](#)

- Alternatives are complete; next step will be to select a preferred alternative

Will there be any cut and fill to hillsides to improve vision?

- Likely yes, especially if we know there are problematic locations.

Property owner at 258<sup>th</sup> Street intersection, east of Humboldt

- Questioning the road realignment of 258<sup>th</sup> Street
  - o Moving landowner to one point of access and changing alignment of 258<sup>th</sup> to allow for a better vantagepoint when entering SD 38.
- Currently the property is used for an Air B&B (she does not reside there, but does have cattle there and farmground)
- Will 258<sup>th</sup> stay gravel? Yes.
- Cattle lot has been moved back from the ROW already; fence is guardrail
- Hill (pink arrow) to the west of the house blocks snow; would not mind it being graded down
  - o A 7:1 backslope could be considered to the hill. Take the hill out to the ROW, provide more snow storage. May need a temporary easement to cut the backslope.

- Eagle nest to the west of her property.
  - o Banner confirmed. Approximate lat/long 43.646921, -97.053676. Two adults, potential eaglets in nest.

Property owners at 45938 SD 38:

- Shed to the east of the house is also theirs, used by Nortec Seeds
- No change to access; no concerns.

City of Hartford –

- Liked Interchange Options 1 and 9 the best.
- Bike Trail in Hartford on south side of road – becomes very close to roadway along one stretch
  - o North side of SD 38 has more room, but also more access points to deal with
- Owns triangle piece south of 38, west of I90 (pink polygon below)

- Do not prefer alternatives that cut the triangle parcel off
- They would like to sell this parcel, but access becomes problematic with the interchange improvements – a roundabout design would work, but they don't like roundabouts.
  - For access to this parcel off the interchange, it would need FHWA approval and has to be a public roadway; cannot be private. Anything that would tie to the ramp cannot be a private road.
- Likely would use approach access to parcel coming from the west across the creek.
- Have plans to expand the WWTP to the east, so avoid doing any improvements/alternatives that would affect that area.
- Bike path timing?
  - If DOT would do a path in conjunction with a SD 38 project, the City would have to wait for that project to come along. If they decide to do it before a SD 38 project, they could apply for TAP funding and use those funds to construct the path. If the road project would impact an existing bike path, SDDOT would replace the path.
- In recent years, have been annexing more land to the east.
- Pedestrian usage at the High School crossings – does this area need a light?
  - would warrant a light at 2<sup>nd</sup> Street.
  - Also would be a good spot for a roundabout since the road is skewed.
- City overall would like to see:
  - Avoidance of City-owned land
  - Reduced speeds east of town
  - Incorporation of bike trail on south side, sidewalk on the north side
  - Median

**West Central High School; 705 E 2<sup>nd</sup> Street; Hartford, SD 57033 (5:30-7:30 PM)**

Resident along the route:

- With a raised median (18-20 feet wide), a person could end up going to the next mile marker to turn around
- Concern with lack of breaks to turn around and driving farther to do so in rural cross sections.
  - o Raised medians will reduce turning vehicle accidents.

Resident near Hartford:

- What about roundabouts for kids going to school? That seems dangerous.
  - o Younger generations actually navigate roundabouts better than older generations.
- Concern about impacts to existing trees and shelterbelts.

Resident on Middle Drive:

- Concern of how access will be provided to residences during construction.

Resident adjacent to SD 38:

- (Husband) Sometimes there is no passing right now due to traffic and sight restrictions and there is no median
- (Wife) Likes the 4-lanes, dislikes the median.
- Concerns with maneuvering horse trailer or hay loads from their house (south of SD 38) across the road to their pasture north of SD 38.
- Safety concerns with riding horses across 4-lanes and a median.
- With the reconfiguration of the access road, they like the idea of the whole development not driving in front of their house.

Make sure culvert drainages are adequate.

Make a 4-way stop on Western / SD 38 – funnel traffic to the interstate.

Property owner near Pheasant Run Avenue – realignment on south side of the road

- Would like more turn-around locations
- Heavy farm equipment – have to go to turn around at Ellis Road – already heavy traffic there
- If they turn to the west, there's a hill; line of sight isn't good
- Would prefer center turn lane as opposed to median.

Brad Songstad – likes Option 1 and 3 for Mainline for his business

- Option 4, no driveway to his parcel south of SD 38
- Utility easement present
- Current striping in front of his business on the north side of SD 38 confuses customers
- If there was a raised median, no one would get into his business. 99% of his business comes from WB I-90, no place to turn in. He needs a median break.
- Aerial backgrounds are old; there is development in the lots east of his parcel south of 38

Landowner on Tea Ellis Road – northwest corner of intersection – consolidate to one access point.

- Concern with median

6/5/2023 11:26	Safety	Safety-03	This four-lane section of hwy 38 is poorly lit up to the Marion Rd. intersection. This, combined with high speeds and a straight stretch of road all the way to the interstate makes the road ideal for racers and speeders. Many times I've witnessed cars blowing the red light at night, sometimes without headlights on or smoked-out headlights, making them difficult to see when making a legal crossing of hwy 38.	0	anyhoo@gmail.com					Mobile		
6/5/2023 11:36	Traffic	Traffic-1	Seeing cars coming east-bound (from Hartford) when exiting off the off-ramp into Hwy 38 is difficult.	2	anyhoo@gmail.com					Mobile		
6/5/2023 11:37	Traffic	Traffic-2	Traffic backs up here sometimes when cars are trying to enter I-90	0	anyhoo@gmail.com					Mobile		
6/5/2023 11:40	Safety	Safety-04	Stoplights are badly needed here. It's a large intersection and with development now north of Hwy 38. Vehicles tend to drive over 50mph on this road, so crossing hwy 38 is dangerous.	3	anyhoo@gmail.com					Mobile		
6/5/2023 11:44	Safety	Safety-05	Very difficult to see north-bound drivers on Marion Rd when trying to turn into Marion Rd from N 54th Street. There's a hill just south of Marion/N 54th that creates a very short sight-line. Perhaps a stop light is needed here?	3	anyhoo@gmail.com					Mobile		
6/7/2023 12:27	Safety	Safety-06	Need to slow the speed down through town to 35 all the way west to 19	0	siemonsmaelectric@yahoo.com					Mobile	South Dakota	Winner
6/7/2023 14:06	Safety	Safety-02-child	This intersection is very dangerous, especially for students attempting to turn west going to school at the same time commuters are driving east at 65+ mph. It will only get more difficult when the high density apartments are full. This is also dangerous when driving west on 38 from SF attempting to turn onto Mickelson. I feel like a sitting duck stopped on 38 hoping traffic behind me doesn't rear end me at full speed.	2	mark.heath@sanfordhealth.org					Desktop	South Dakota	Sioux Falls
6/15/2023 10:28	Traffic	Traffic-3	Traffic does not slow down coming into Hartford, making it difficult for multi-modal traffic to enter, 2 exit, or cross Highway 38 at Western Avenue.	2	mr.atlasboy@gmail.com					Desktop		
6/15/2023 10:29	Traffic	Traffic-4	The speed limit of 65 MPH feels too fast for this stretch of Highway 38 near Hartford Heights, especially with the number and spacing of access points and the bike trail along the highway.	0	mr.atlasboy@gmail.com					Desktop		
6/15/2023 10:34	Safety	Safety-07	The 90-degree-angle correction greatly improved safety at this intersection, but traffic on Highway 38 still creates safety concerns for cross traffic. Consider a traffic signal, roundabout, or other traffic calming technique at this intersection.	3	mr.atlasboy@gmail.com					Desktop		

6/15/2023 10:38	Safety	Safety-08	As development around this intersection continues to blossom, consider a traffic signal, roundabout, or other traffic calming technique to improve safety.	2	mr.atlasboy@gmail.com						Desktop		
6/15/2023 10:40	Safety	Safety-09	Due to traffic coming from multiple directions at this intersection, consider an all-way stop, roundabout, or other traffic calming technique to improve safety.	2	mr.atlasboy@gmail.com						Desktop		
6/26/2023 6:30	Safety	Safety-10	Flatten road so it is easier to see traffic heading East when turning off mesa.	1	alysia.boysen@gmail.com						Mobile	Nebraska	Omaha
6/26/2023 6:31	Safety	Safety-11	Add execution lanes at Ellis road so that traffic can safely merge onto hwy 38	1	alysia.boysen@gmail.com						Mobile	Nebraska	Omaha
3/13/2024 14:26	Traffic	Traffic-5	Enough people live in this neighborhood to make a turn lane a good option. It is difficult to wait to turn in or out with traffic moving at 65+	1	kristen.foster88@gmail.com	7013309738	57107	Kristen	Hall		Mobile	South Dakota	Sioux Falls
3/24/2024 9:17	Traffic	Traffic-3-child	add a roundabout	0	bud7997@gmail.com						Desktop	South Dakota	Hartford
3/24/2024 9:18	Safety	Safety-07-child	looks like a great place for a roundabout	0	bud7997@gmail.com						Desktop	South Dakota	Hartford
3/24/2024 9:25	Safety	Safety-08-child	this intersection is a tricky one from both directions on 38. The cars turning into and from Mickleson, and add the fact that its a curve and a hill. Great spot for a roundabout	0	bud7997@gmail.com						Desktop	South Dakota	Hartford
3/24/2024 9:33	Traffic	Traffic-2-child	hard to see W bound 38 traffic when getting off W bound 90. I like Option 6 of the interchange plan. Roundabouts will at least slow the flow but keep things moving.	0	bud7997@gmail.com						Desktop	South Dakota	Hartford
3/24/2024 9:41	Safety	Safety-11-child	N bound Ellis Road traffic turning East on 38 could use a turning lane onto an acceleration lane. I'm a W bound turner myself, not sure if there could be a left turning acceleration lane	0	bud7997@gmail.com						Desktop	South Dakota	Hartford
3/26/2024 11:12	Traffic	Traffic-2-child	Strongly recommend a right turn lane, coming off the interstate exit, with no stop sign (maybe a yield sign) which extends past the service road to allow merging vehicles to get up to speed and to allow easier commute to Hartford and also reducing traffic that backs up at the exit.	0	wwhaines@icloud.com						Mobile	Arizona	Phoenix

Comments: We are land owners along Highway 38 on 45816 Hwy 38 which borders 258th street near Humboldt SD. I attended the afternoon meeting on March 13th in Sioux Falls and from what your plan

shows you are wanting to take out our driveway access to Highway 38. We have managed this farm for 44 years and never had an issue with our access to Highway 38. We have been very grateful for this access because of the snow accumulation that this stretch of land creates in the winter. In the winter 258th street is not always plowed due to the extremely deep snow so this will create an issue if they were to merge our driveway to 258th street. We have a cattle operation that we need to access at least twice a day to monitor and feed cattle. Adding 500 feet to our driveway would be detrimental to our operation. I understand adding a curve on the gravel road on 258th would be a benefit for those traveling 258th street but extending our driveway to join it would not be a benefit to us. Our septic system runs right up to the edge of our property by the driveway and feedlot which would also create problems if disturbed. The best solution would be to leave the driveway access from 45816 Hwy 38 as is. Thank you, Mike and Jana Miles

Comments: Hello, I live at the house right at the junction of 261st and Highway 38. I was concerned that the meeting tonight only discussed closing our access to the highway. Visibility to enter 38 is much worse at 467th Ave and many people in the neighborhood use the 261st access for this reason. I am also concerned about how the larger road will affect our well that we share with two other houses. The access to the neighborhood is also beneficial due to large vehicles such as buses or trucks being able to use 261st to safely turn around if needing to go back in the other direction. As someone very much affected by this decision, I feel our best outcome would be a four lane road past the neighborhood with an optional turn lane to 261st St. If there seems to be no way around closing 261st, then it would be beneficial to at least have 467th paved down to 12th St.

Comments: Today, March 13, 2024, I listened to the prerecorded presentation for the project. Please note that on the traffic volume projections map, the I-90 speedway entrance and the 459th Ave are marked incorrectly. I discovered that when reviewing where my own property is along Hwy 38. From what I understand, there will be no additional changes from Humboldt to Hartford's Western Avenue as a result of this study. Please let me know if that is correct. I will not be able to attend the open house tonight. Thank you

Comments / Questions:

No median - 3 lanes or 4 lanes OK along 38 between  
468 Ave and Ellis Road.

Need to be able to move farm equipment going both  
east and west on 38.

There are a number of properties that would need to go east & west in <sup>this</sup> section  
Median with stop ~~and~~ snow on parts of this part of the  
Road.

### Comments / Questions:

*I'm not against a 4 lane road, just against not getting a turn lane to get into my driveway. Continuing on to make a U-turn to me is going to be much more dangerous. In the winter when the plows have not cleared the roads yards, I could possibly get stuck in the snow making a U-turn and get frost bitten trying to shovel my vehicle out of the snow. Also the snow will not be able to blow across due to a median and if there is a drift, there will be no way to get around it. When pulling a long trailer into my yard, a U-turn will not be practical. I do not wish to drive further west to go home. I want and need a turn lane to my driveway! The state needs to consider property owners should have a right to have a lane to go home without driving further.*

**SDDOT**

Greetings,

It was a pleasure meeting everyone at the SD38 Corridor Study public open house at West Central High School. It is always nice meeting fellow SDSU Civil Engineering graduates.

We own properties adjacent to the SE corner of the I-90/SD38 interchange. The main property being north and south of I-90, bound to the south by SD38, and to the west by the east-bound ramp right-of-way (depicted as A). A smaller six-acre parcel adjacent to the SE corner of the SD38/466<sup>th</sup> Ave intersection rights-of-way (depicted as B).

We paid a premium for these properties due to their location adjacent to their intersection rights-of way. The six-acre lot was purchased at auction over twenty years ago. It sold for more than ten times per acre than the adjacent property south and east, resulting from its intersection location.

We support planned options that mitigate reduction of our property values. Several planned options show relocations of right-of-way for the interstate, highway, and 466<sup>th</sup> Ave. To mitigate reduction in property value, our property lines common to existing rights-of-way must remain common to any relocated rights-of-way. Such scenarios are depicted as hatched areas south of the interstate on the attached aerial photographs.

We support options that least affect our property, including but not limited to land, structures, billboards/signs, utilities, fences etc. We would expect to be compensated/reimbursed for any loss or relocation of any such property. Transfer of state-owned land would be considered as depicted by hatched areas north of the interstate.

Options least affecting our properties include options 5, 8 and 9, with 5 being most desirable. Option 3.2 could be considered if slightly modified. The lot adjacent east of parcel B is owned by ANCO. The proposed alignment of 466<sup>th</sup> Ave runs through the newly

constructed ANCO building. Cemcast is adjacent to parcel B to the south and southeast. Cemcast would probably be agreeable to swap their NW triangular corner for an equal SE corner of parcel B, squaring off both lots. 466<sup>th</sup> Ave could then be aligned dividing parcel B roughly into equal parcels, depicted on option 3.2 and attached Figure A. Again, we would expect compensation to relocate any billboards, structures, utilities, fences etc. We would consider a land transfer of state-owned land for compensation of land lost (hatched area across interstate).

Options 1, 2, 3, 4, 6 & 7 have a much more drastic effect on our properties. We oppose moving 466<sup>th</sup> Ave unless our existing common property line is moved along with relocated 466<sup>th</sup> Ave right-of-way. These options also affect significantly more of our land, billboards, structures, utilities and fence etc. Again, state-owned land across interstate could be considered for compensation.

We do not support any medians, raised or painted, prohibiting customers entering or leaving our properties. Several years ago, a painted median prohibiting eastbound traffic from accessing our business was created along SD38. Almost all of our customers exit off I-90 arriving at our business eastbound on SD38. This has resulted in a very negative impact not only on our business but a major inconvenience for our customers.

Most drive past our driveway slowly, prohibited by the painted median. Most find a place to turn around anywhere from 0.1 to 3.0 miles down the highway. Some drive all the way to Marion Road back to I-90W. Many of our customers are big RVs, trailers of all kinds, including campers and semi-trucks, which are difficult to U-turn. We were dumbfounded that not only did nobody ask for our input, but we were also never informed of it beforehand.

Of the three mainline options, we prefer option one, painted, not raised medians. We support a center turn lane allowing both right and left turns similar to the center turn lane just across I-90 along Hartford Heights, a stone's throw away. They have similar driveways and intersections with a center two-way turn lane, approved with a higher traffic count.

In addition, for years the directional guide sign just before the stop sign on the east bound off ramp indicated gas 1.0 mile to the left, when it is 0.1-0.2 miles. Recently the 1.0 mile has been changed to 0.4 mile. This also causes gas customers to drive past only to inconveniently search for a place to turn around without running out of gas.

And last, we do not support the removal of the residential driveway to the east. Both residences each have their own separate driveway. The centerline of the west driveway is thirty feet west of the common property line. If the east property driveway is removed, the

west driveway will have to be moved thirty feet east to straddle the property line (Fig. 8). A tree or two would also have to be removed.

In summary, our first preference would be to leave existing conditions unchanged with the exception of the painted median prohibiting access to our business driveway and correcting the directional guide sign at the off ramp.

Our next preference would be options 5, 8 & 9. We expect our property lines common with existing rights-of-way will move along with the new rights-of-way depicted as hatched area west of parcel A. Driveway shown across SD38 from 466<sup>th</sup> intersection. Hatched area west of B and state-owned land across I-90 could be considered for transfer as compensation for property loss. Option 3.2 may be ok with a revised alignment due to the existing building.

Options 1, 3, 4 & 6 are preferred least unless parcel B property line commonly shared with the existing right-of-way will move along with new right-of-way. Not doing so would greatly reduce the value of parcel B. The smaller hatched area further west and state-owned land across I-90 could be considered for transfer to compensate for property loss. Parcel B may also have to have driveway access to SD38.

A SD38 painted center turning lane allowing both right and left turns similar to the other side of the I-90 bridge along Hartford Heights is preferred. It is permitted with a higher traffic count with similar driveways and street intersections.

Last, we prefer the existing driveway not to be removed, requiring relocation of the other driveway to straddle the property line and tree removal.

Please feel free to contact me to discuss further.

Best Regards,

**Subject:** New response for survey: SD 38 Corridor Study on project: SD 38 Corridor Study

**This email came from outside the HR Green organization. Please use caution when clicking on hyperlinks and opening attachments**

The following response on survey: SD 38 Corridor Study from an unknown stakeholder was submitted regarding the project: SD 38 Corridor Study

5/4 Complete

1. Tell us about how you relate to the corridor (check all that apply):

I live near Highway 38

I rely on Highway 38 for my daily commute to Sioux Falls

2.How often do you travel on Highway 38?

Daily

3. What would you like improved on Highway 38? Please rank based on high priority and low priority.

Safety on Highway 38:

1 (high)

Traffic Flow:

4

Pedestrian crossin:

5 (low)

Bike options:

5 (low)

Access to or from Interstate 90:

1 (high)

Access to adjacent land use:

2

Safety at intersections:

1 (high)

4.If I could fix one thing about the Highway 38 corridor, it would be:

Morning commute is busy with buses and trucks. Entry to the highway from intersections is an important need, especially when visibility is limited.

Subject: SD Highway 38 – Future Build Concept Traffic Operations and Safety Analysis

Date: July 19, 2024

---

## Introduction

The purpose of this technical memorandum is to document the future build concept traffic assessment in support of the study being completed along SD 38. This technical report will provide a future year conditions assessment of the highway and each of the study intersections. **Table 1** depicts the eighteen study intersections reviewed as part of the existing conditions assessment and traffic data review.

TABLE 1: SD 38 STUDY INTERSECTIONS

Main Line	Cross Street(s)
SD Highway 38	SD Highway 19 / 457 <sup>th</sup> Avenue
SD Highway 38	459 <sup>th</sup> Avenue
SD Highway 38	I-90 Speedway Entrance
SD Highway 38	Western Avenue / 463 <sup>rd</sup> Avenue
SD Highway 38	Main Avenue
SD Highway 38	Vandemark Avenue
SD Highway 38	2 <sup>nd</sup> Street
SD Highway 38	West Central High School Entrance
SD Highway 38	Railroad Street / 464 <sup>th</sup> Avenue
SD Highway 38	Mickelson Road / 260 <sup>th</sup> Street
SD Highway 38	466 <sup>th</sup> Avenue (North)
SD Highway 38	WB I-90 Exit 390
SD Highway 38	EB I-90 Exit 390
SD Highway 38	466 <sup>th</sup> Avenue (South)
SD Highway 38	County Highway 141 / 468 <sup>th</sup> Avenue
SD Highway 38	County Highway 139 / 469 <sup>th</sup> Avenue
SD Highway 38	La Mesa Drive / 470 <sup>th</sup> Avenue
SD Highway 38	Marion Road

## Traffic Forecasting

The existing traffic volume data for the SD 38 corridor was developed from 12-hour count data collected on November 2, 2022, for 17 intersections. To develop future traffic conditions, the Sioux Falls Metropolitan Planning Organization (SFMPO) Travel Demand Model (TDM) and SDDOT GIS data was used to establish the 2050 ADT. Available development site plans were sourced and any planned development trips that had not been included in the TDM were incorporated into the future year forecasted volumes. The growth calculated from the ADT values were used to develop 2050 design year morning (AM) and afternoon (PM) peak hour volumes at study intersections. The estimated interim year 2029 morning (AM) and afternoon (PM) peak hour volumes were developed by process of interpolation using straight-line growth assumptions based on the existing year and future year 2050 traffic volumes. Any adjustments that were necessary to relocate traffic due to intersection modifications within concepts were completed manually. The peak hour volumes were previously used to evaluate the existing condition and

future no-build traffic operations for intersections and highway segments within the study area and the same forecasts will be utilized to evaluate the future build concept conditions.

## Traffic Operations Methodology

### Intersections

Intersection level of service (LOS) is primarily a function of peak hour turning movement volumes, intersection lane configuration, and traffic control. For intersection analysis, the Highway Capacity Manual (HCM) defines LOS in terms of the average control delay at the intersection in seconds per vehicle. The results of a HCM analysis are typically presented in the form of a letter grade (A-F) that provides a qualitative estimate of the operational efficiency or effectiveness of the corridor. Much like an academic report card, LOS A represents the best range of operating conditions (i.e., motorists experiencing little delay or congestion) and LOS F represents the worst (i.e., extreme delay or severe congestion).

**Table 2** defines the control delay range corresponding to each LOS for unsignalized and signalized intersection locations. At intersections, LOS E is considered to be at capacity and typically represents a scenario in which significant queuing is present or traffic signal cycle failure is evident. For unsignalized intersections, the intersection LOS is given by the worst approach LOS. For instance, an intersection with LOS D on one approach and LOS B on the rest would result in LOS D for the intersection.

TABLE 2: LEVEL OF SERVICE FOR CONTROL DELAY (INTERSECTIONS)

Level Of Service	Unsignalized	Traffic Signal
	Control Delay (sec/veh)	Control Delay (sec/veh)
A	≤ 10	≤ 10
B	> 10 and ≤ 15	> 10 and ≤ 20
C	> 15 and ≤ 25	> 20 and ≤ 35
D	> 25 and ≤ 35	> 35 and ≤ 55
E	> 35 and ≤ 50	> 55 and ≤ 80
F	> 50	> 80

Source: Highway Capacity Manual, 7<sup>th</sup> Edition.

Following SDDOT guidance, LOS C is the desired minimum traffic operational goal for intersections in rural environments while LOS D is an acceptable operational goal for intersections in dense urban environments. The intersections within the study area have a desired traffic operational goal of LOS C.

### Highways

Two-lane highway LOS is defined by follower density which relates directly to the passing opportunities available to motorists. In two-lane highway analysis, the highway is segmented according to whether passing zones are present or whether passing is prohibited or otherwise unavailable due to geometric limitations. Multilane highway LOS is defined by density which relates to the ability of a motorist to maneuver freely within the traffic stream. For multilane highway analysis, the highway is segmented anywhere that the uniformity of the traffic or roadway conditions change.

Error! Reference source not found. defines the follower density range corresponding to each LOS for two-lane highway segments. On two-lane highways, LOS E is considered to be at capacity. For two-lane highway segments, a LOS B would represent a scenario where some platooning is present with the potential passing demand and passing opportunities balanced while a LOS D would represent a scenario where significant platooning is present and passing demand far exceeds passing opportunities.

TABLE 3: LEVEL OF SERVICE FOR FOLLOWER DENSITY (TWO-LANE HIGHWAYS)

Level Of Service	Speed $\geq$ 50 mph	Speed $<$ 50 mph
	Follower Density (followers/mi/ln)	Follower Density (followers/mi/ln)
A	$\leq 2.0$	$\leq 2.5$
B	$> 2.0 - 4.0$	$> 2.5 - 5.0$
C	$> 4.0 - 8.0$	$> 5.0 - 10.0$
D	$> 8.0 - 12.0$	$> 10.0 - 15.0$
E	$> 12.0$	$> 15.0$
F	Demand exceeds capacity	

Source: Highway Capacity Manual, 7<sup>th</sup> Edition.

**Table 4** defines the follower density range corresponding to each LOS for multilane highway segments. On multi-lane highways, LOS E is considered to be at capacity. For multilane highway segments, a LOS B represents a reasonably free-flowing condition with minimal maneuvering restrictions while a LOS D would represent a scenario where speeds begin to decline and freedom to maneuver is limited.

TABLE 4: LEVEL OF SERVICE FOR FOLLOWER DENSITY (MULTILANE HIGHWAYS)

Level Of Service	Free-Flow Speed (mph)	Density (passenger cars/mi/ln)
A		$\leq 11.0$
B		$> 11.0 - 18.0$
C		$> 18.0 - 26.0$
D		$> 26.0 - 35.0$
E	60	$> 35.0 - 40.0$
	55	$> 35.0 - 41.0$
	50	$> 35.0 - 43.0$
	45	$> 35.0 - 45.0$
F	60	$> 43.0$
	55	$> 45.0$
	50	$> 43.0$
	45	$> 45.0$

Source: Highway Capacity Manual, 7<sup>th</sup> Edition.

Following SDDOT guidance, LOS C is the desired traffic operational goal for highways in rural environments and LOS D is considered the minimal acceptable operations for highways in urban environments. The SD 38 highway segments within the study area are categorized as rural with federal functional classification of collector between Humboldt to Hartford and categorized as urban with federal functional classification of minor arterial between Hartford to Sioux Falls. The highway segments within the study area have a desired traffic operational goal of LOS C with minimum allowable LOS D between Hartford to Sioux Falls.

### Future Build Corridor Concepts

Opening Year 2029 and Design Year 2050 traffic volume forecasts were used to evaluate the traffic operations of intersections and the highway corridor under the build concepts. Operational analysis was completed for the AM and PM peak hour periods of each scenario. Build concept plans are available under separate cover.

The following 3 Build condition scenarios were evaluated:

- Alternative 1** – two-lane highway from Humboldt to Hartford (as existing), three-lane roadway from Western Avenue to Railroad Street, five-lane roadway (center TWLTL) between Railroad Street to the I-90 Exit 390 interchange, two-lane highway from the I-90 interchange to 469<sup>th</sup> Ave/County Highway 139, and five-lane roadway (center TWLTL) from 460<sup>th</sup> Ave/County Highway 139 to Sioux Falls.

- Alternative 2** – two-lane highway from Humboldt to Hartford (as existing), three-lane roadway from Western Avenue to Railroad Street, five-lane roadway (center TWLTL) between Railroad Street to the I-90 Exit 390 interchange, four-lane highway (raised median) from the I-90 interchange to Sioux Falls.

- Alternative 3** - two-lane highway from Humboldt to Hartford (as existing), three-lane roadway from Western Avenue to Railroad Street, four-lane roadway (raised median) between Railroad Street to Sioux Falls.

### Future Traffic Operations

Traffic operations analysis for the study area intersections included capacity evaluation using the Highway Capacity Manual (HCM) 7<sup>th</sup> Edition two-lane highway and multilane highway methodologies through use of the Highway Capacity Software (HCS) 2022. Output reports from the HCS2022 software are available in the Appendix.

Traffic operations analysis for the study area SD Highway 38 corridor included capacity evaluation using the Highway Capacity Manual (HCM) 7<sup>th</sup> Edition two-lane highway and multilane highway methodologies through use of the Highway Capacity Software (HCS) 2022. The highway traffic operations analysis used conceptual highway geometry, future year traffic volumes, and design speeds.

The future year traffic operations analyses does not include a comparison of concepts for the interchange ramp terminal intersections due to that portion of the corridor being removed from this study for inclusion in a future study to document the potential changes to interstate access.

### Opening Year 2029

The results of the Opening Year 2029 intersection capacity analyses can be seen in **Table 5**. The results of the two-lane highway and multilane highway corridor capacity analyses can be seen in **Table 6** and **Table 7**.

Under the Opening Year 2029 conditions, the traffic operations analyses showed acceptable operations at all intersections within the study area, under all alternative scenarios, with intersections achieving LOS C or greater during both the AM and PM peak hours.

Under the Opening Year 2029 conditions, the traffic operations analyses showed acceptable operations at all of the highway segments within the study area, under all alternative scenarios, with all segments achieving LOS B or greater during both the AM and PM peak hours.

In general, the Opening Year 2029 condition traffic operations demonstrated acceptable performance measures at all intersections and highway segments within the study area. The desired LOS was realized for all intersections and highway segments during the AM and PM peak hours for all concepts.

## Design Year 2050

The results of the Design Year 2050 intersection capacity analyses can be seen in **Table 8**. The results of the two-lane highway and multilane highway corridor capacity analyses can be seen in **Table 9** and **Notes**: Bold indicates Multilane Highway

Highlighted Color indicates a poor LOS  
 NA indicates Segment Removed for Build Conditions  
 Multilane2,3 indicates segment type for Alternative 2 and 3

Table 10.

Under the Design Year 2050 conditions, the traffic operations analyses showed acceptable operations at all intersections within the study area, with intersections achieving LOS C or greater during both the AM and PM peak hours. To achieve LOS C goals, it was necessary to convert several intersections from two-way stop control to signalized operations. The following intersections were analyzed under traffic signal control:

- SD 38 & Western Avenue/463rd Avenue
- SD 38 & 2<sup>nd</sup> Street
- SD 38 & Railroad Street/464th Avenue
- SD 38 & Mickelson Road/260th Street
- SD 38 & County Highway 139/469th Avenue
- SD 38 & La Mesa Drive/470th Avenue

Under the Design Year 2050 conditions, the traffic operations analyses showed acceptable operations at all of the highway segments within the study area, under all alternative scenarios, with all segments achieving LOS C or greater during both the AM and PM peak hours.

In general, the Design Year 2050 condition traffic operations demonstrated acceptable performance measures at all intersections and highway segments within the study area. The desired LOS was realized for all intersections and highway segments during the AM and PM peak hours for all concepts.

### *Predictive Safety Analysis*

Safety analysis of locations within the SD Highway 38 study corridor area of influence was completed for the Build scenarios. Predictive crash analysis was completed using the Interactive Highway Safety Design Model (IHSDM) Crash Prediction analysis tool to evaluate the safety effects and predict the expected change in crashes between design year scenarios. IHSDM reports are available in the Appendix.

The crash analysis determined the predicted crash frequency within the SD Highway 38 area of influence resulting from the Build roadway conditions. Predicted crash frequency is a measure of safety performance based on segments or intersections of a common facility type. Predictive crash frequency accounts for changes in traffic volume, and roadway characteristics, and is appropriate for comparing the variations in crash frequency that may result from added travel lanes or other geometric modifications.

A summary of the predicted crashes for the SD Highway 38 segments between the intersections with SD Highway 19 and Marion Road are provided in **Table 11**. The predicted crash analysis showed a significant reduction in crashes for build scenarios compared to the no-build scenario (two-lane highway). The addition of lanes, wider shoulder widths, median, and decrease in density are some of the factors causing the reduction in crashes for the build scenarios. The predicted frequency of crashes between build scenarios is consistent between the SD Highway 19 and Railroad Street segments, where there were no major geometric changes, with noticeable differences between the Railroad Street to Marion Road segments where the Build scenarios represented changes to the number of lanes, shoulder width and/or median type.

Furthermore, Alternative 3 would be safer compared to Alternatives 1 and 2. With higher volumes of opposing traffic, raised medians limit left turn movements to certain concentrated points, thereby reducing conflicting movements between vehicles. The predicted crash analysis demonstrated the potential for crash reductions in Alternative 3 with a raised median from Railroad Street to Marion Road with a reduction of 194.7 total segment crashes compared to Alternative 1 with TWLTL and a two-lane cross section between Railroad Street and Marion Road. The predictive crash analysis also showed that Alternative 2 with a TWLTL and raised median cross section between Railroad Street and Marion Road would result in a reduction of 160.34 total segment crashes compared to Alternative 1.

A summary of the predicted crashes for the SD Highway 38 intersections are provided in **Table 12**. At study intersections, the predicted crash frequency was consistent from SD Highway 19 to Railroad Street, where no differences between the corridor or intersection geometrics existed. There were noticeable changes in the predicted crash frequency at the County Highway 141/468<sup>th</sup> Avenue intersection and the County Highway 139/469<sup>th</sup> Avenue where the influence of the corridor can be seen to also have an effect on the safety at these intersections resulting in a reduction of 89.9 total crashes with the five-lane cross section.

## Summary

The purpose of this technical memorandum is to document the future build concept traffic assessment at the eighteen study intersections and associated highway corridor segments along the SD Highway 38 corridor, from the SD Highway 19 intersection in Humboldt, South Dakota to the Marion Road intersection in Sioux Falls, South Dakota.

Using the Future year 2050 traffic forecasts, the traffic operations at study intersections and along the highway were evaluated for the three build corridor concepts.

- **Alternative 1** – two-lane highway from Humboldt to Hartford (as existing), three-lane roadway from Western Avenue to Railroad Street, five-lane roadway (center TWLTL) between Railroad Street to the I-90 Exit 390 interchange, two-lane highway from the I-90 interchange to 469<sup>th</sup> Ave/County Highway 139, and five-lane roadway (center TWLTL) from 460<sup>th</sup> Ave/County Highway 139 to Sioux Falls.
- **Alternative 2** – two-lane highway from Humboldt to Hartford (as existing), three-lane roadway from Western Avenue to Railroad Street, five-lane roadway (center TWLTL) between Railroad Street to the I-90 Exit 390 interchange, four-lane highway (raised median) from the I-90 interchange to Sioux Falls.
- **Alternative 3** – two-lane highway from Humboldt to Hartford (as existing), three-lane roadway from Western Avenue to Railroad Street, four-lane roadway (raised median) between Railroad Street and Sioux Falls.

Under the Opening Year 2029 conditions, the traffic operations analyses showed acceptable operations at all intersections within the study area, under all alternative scenarios, with intersections achieving LOS C or greater during both the AM and PM peak hours. The traffic operations analyses showed acceptable operations at all of the highway segments within the study area, under all alternative scenarios, with all segments achieving LOS B or greater during both the AM and PM peak hours. The desired LOS was realized for all intersections and highway segments during the AM and PM peak hours for all concepts

Under the Design Year 2050 conditions, the traffic operations analyses showed acceptable operations at all intersections within the study area, with intersections achieving LOS C or greater during both the AM and PM peak hours. To achieve LOS C goals, it was necessary to convert several intersections from two-way stop control to signalized operations. The traffic operations analyses showed acceptable operations at all of the highway segments within the study area, under all alternative scenarios, with all segments achieving LOS C or greater during both the AM and PM peak hours. The desired LOS was realized for all intersections and highway segments during the AM and PM peak hours for all concepts.

The predictive safety analysis of the SD Highway 38 study corridor revealed the potential for crash reductions in segments that contained a raised median with a reduction of 194.7 total crashes in segments with a raised median compared to without a raised median. The predictive safety analysis of the study intersections showed that there were noticeable changes in the predicted crash frequency at the intersections where the two-lane highway was maintained compared to the concepts with a five-lane cross section with a reduction of 89.9 total crashes with the five-lane cross section.

## Recommendations

Based on the evaluations and conclusions documented for this corridor study, it is recommended to modify the existing SD 38 corridor as seen in Alternative 3. This alternative provides sufficient capacity to handle future traffic demand while increasing the overall safety of the corridor. Intersections along the study corridor should be monitored for traffic demand changes and plan for future capacity improvements or installation of traffic signal controls, if warranted.

## Segment 1

### Vehicle Inputs

Segment Type	Passing Zone	Length, ft	1069
Measured FFS	Measured	Free-Flow Speed, mi/h	70.0

### Demand and Capacity

Directional Demand Flow Rate, veh/h	157	Opposing Demand Flow Rate, veh/h	286
Peak Hour Factor	0.88	Total Trucks, %	5.79
Segment Capacity, veh/h	1700	Demand/Capacity (D/C)	0.09

### Intermediate Results

Segment Vertical Class	1	Free-Flow Speed, mi/h	70.0
Speed Slope Coefficient (m)	4.34767	Speed Power Coefficient (p)	0.51808
PF Slope Coefficient (m)	-1.25475	PF Power Coefficient (p)	0.80124
In Passing Lane Effective Length?	No	Total Segment Density, veh/mi/ln	0.6
%Improvement to Percent Followers	0.0	%Improvement to Speed	0.0

### Subsegment Data

#	Segment Type	Length, ft	Radius, ft	Superelevation, %	Average Speed, mi/h
1	Tangent	1069	-	-	69.0

### Vehicle Results

Average Speed, mi/h	69.0	Percent Followers, %	24.8
Segment Travel Time, minutes	0.18	Follower Density (FD), followers/mi/ln	0.6
Vehicle LOS	A		

### Bicycle Results

Percent Occupied Parking	0	Pavement Condition Rating	4
Flow Rate Outside Lane, veh/h	157	Bicycle Effective Width, ft	30
Bicycle LOS Score	1.86	Bicycle Effective Speed Factor	5.07
Bicycle LOS	B		

## Segment 2

## **Crash Prediction Evaluation Report**

June 1, 2024

## **Disclaimer**

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

## **Limited Warranty and Limitations of Remedies**

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

## **Notice**

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

## Report Overview

**Report Generated:** Jun 1, 2024 3:23 PM

**Report Template:** System: Single Page, 508 Compliant [System] (mlcpm5, Dec 5, 2019 2:16 PM)

**Evaluation Date:** Sat Jun 01 15:07:09 CDT 2024

**IHSDM Version:** v17.0.0 (Sep 22, 2021)

**Crash Prediction Module:** v12.0.0 (Sep 22, 2021)

**User Name:** naveen.mallipaddi

**Organization Name:**

**Phone:**

**E-Mail:**

**Project Title:** SD-38\_Build\_Option1\_I90EBRamp\_I

**Project Comment:** Created Mon Mar 27 16:47:43 CDT 2023

**Project Unit System:** U.S. Customary

**Highway Title:** SD-38

**Highway Comment:** Created Mon Mar 27 16:49:47 CDT 2023

**Highway Version:** 22

**Evaluation Title:** Evaluation 56

**Evaluation Comment:** Created Sat Jun 01 15:06:37 CDT 2024

**Minimum Location:** 171+44.000

**Maximum Location:** 580+10.000

**Policy for Superelevation:** AASHTO 2011 U.S. Customary

**Calibration:** HSM Configuration

**Crash Distribution:** HSM Configuration

**Model/CMF:** HSM Configuration

**First Year of Analysis:** 2025

**Last Year of Analysis:** 2050

**Empirical-Bayes Analysis:** Site-Specific

**Highway with Crash History:** SD-38

**Highway with Crash History Comment:** Created Mon Mar 27 16:49:47 CDT 2023

**Highway with Crash History Version:** 22

**First Year of Observed Crashes:** 2019

**Last Year of Observed Crashes:** 2023

## Disclaimer Regarding Crash Prediction Method

### IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results. *[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

## **Section Types**

### **Section 1 Evaluation**

**Section:** Section 1

**Evaluation Start Location:** 171+44.000

**Evaluation End Location:** 580+10.000

**Area Type:** Rural

**Functional Class:** Arterial

**Type of Alignment:** Undivided, Two Lane

**Model Category:** Rural, Two Lane

**Calibration Factor:** 2U=1.0; 3ST=1.0; 4ST=1.0;

Figure 1. Crash Prediction Summary (Section 1)

**Table 1. Observed Crashes Used in the Evaluation (Section 1)**

Year	Observed Crashes	Total Crashes Used	FI Crashes	FI no/C Crashes	PDO Crashes
2019	5	4	1	0	3
2020	9	9	5	1	4
2021	8	7	3	1	4
2022	6	6	3	1	3
2023	0	0	0	0	0
All Years	28 &nbsp; <sup>[1]</sup>	26	12	3	14

**Footnotes**

<sup>[1]</sup> Note: Observed crash data that does not comply with the associated CPM model requirements may not be used in EB processing.

**Table 6. Expected Highway Crash Rates and Frequencies Summary (Section 1)**

First Year of Analysis	2025
Last Year of Analysis	2050
Evaluated Length (mi)	7.7398
Average Future Road AADT (vpd)	4,284
<b>Expected Crashes</b>	
Total Crashes	422.63
Fatal and Injury Crashes	177.58
Property-Damage-Only Crashes	245.06
<b>Percent of Total Expected Crashes</b>	
Percent Fatal and Injury Crashes (%)	42
Percent Property-Damage-Only Crashes (%)	58
<b>Expected Crash Rate</b>	
Crash Rate (crashes/mi/yr)	2.1002
FI Crash Rate (crashes/mi/yr)	0.8824
PDO Crash Rate (crashes/mi/yr)	1.2178
<b>Expected Travel Crash Rate</b>	
Total Travel (million veh-mi)	314.63
Travel Crash Rate (crashes/million veh-mi)	1.34
Travel FI Crash Rate (crashes/million veh-mi)	0.56
Travel PDO Crash Rate (crashes/million veh-mi)	0.78

Table 7. Expected Crash Frequencies and Rates by Highway Segment/Intersection (Section 1)

Segment Number/Intersection Name/Cross Road	Start Location (Sta. ft)	End Location (Sta. ft)	Length (mi)	Total Expected Crashes for Evaluation Period	Total Predicted Crashes for Evaluation Period	Expected Total Crash Frequency (crashes/yr)	Expected FI Crash Frequency (crashes/yr)	Expected PDO Crash Frequency (crashes/yr)	Predicted Total Crash Frequency (crashes/yr)	Predicted FI Crash Frequency (crashes/yr)	Predicted PDO Crash Frequency (crashes/yr)	(Expected - Predicted) Total Crash Frequency (crashes/yr)	(Expected - Predicted) FI Crash Frequency (crashes/yr)	(Expected - Predicted) PDO Crash Frequency (crashes/yr)	Expected Crash Rate (crashes/mi/yr)	Expected Travel Crash Rate (crashes/mi/trillion veh-mi)	Expected Intersection Travel Crash Rate (crashes/million veh)

Intersection	Other Single-vehicle Collision	0.49	0.1	1.41	0.3	1.86	0.4
Intersection	Overtaken	0.79	0.2	0.55	0.1	1.35	0.3
Intersection	Collision with Pedestrian	0.10	0.0	0.13	0.0	0.23	0.1
Intersection	Run Off Road	11.27	2.7	19.84	4.7	31.15	7.4
Intersection	Total Single Vehicle Crashes	13.39	3.2	24.02	5.7	37.35	8.8
Intersection	Angle Collision	52.29	12.4	43.80	10.4	95.60	22.6
Intersection	Head-on Collision	6.43	1.5	3.31	0.8	9.57	2.3
Intersection	Other Multiple-vehicle Collision	4.43	1.0	4.72	1.1	9.13	2.2
Intersection	Rear-end Collision	22.24	5.3	34.59	8.2	57.03	13.5
Intersection	Sideswipe	4.62	1.1	18.39	4.4	23.36	5.5
Intersection	Total Multiple Vehicle Crashes	90.01	21.3	104.80	24.8	194.69	46.1
Intersection	Total Intersection Crashes	103.40	24.5	128.82	30.5	232.04	54.9
	Total Crashes	177.72	42.1	245.06	58.0	422.45	100.0

**Note:** *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

**Table 13. Evaluation Message**

Start Location (Sta. ft)	End Location (Sta. ft)	Message
580+00.000	580+00.000	Warning: for intersection #3 (580+00.000 to 580+00.000 ), SE SD-38 at 580+00.000 has more than one lane exiting. No intersection crash prediction computed.
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (3,560 vpd) for 2019 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (3,560 vpd) for 2020 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (3,560 vpd) for 2021 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (3,560 vpd) for 2022 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (3,640 vpd) for 2023 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
580+00.000	580+00.000	Warning: for intersection #3 (580+00.000 to 580+00.000 ), SE SD-38 at 580+00.000 has more than one lane exiting. No intersection crash prediction computed.
187+50.000	187+50.000	Warning: for intersection #5 (187+50.000 to 187+50.000 ), minor road traffic volume (3,503 vpd) for 2049 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
187+50.000	187+50.000	Warning: for intersection #5 (187+50.000 to 187+50.000 ), minor road traffic volume (3,570 vpd) for 2050 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (3,802 vpd) for 2025 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (3,882 vpd) for 2026 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (3,963 vpd) for 2027 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (4,044 vpd) for 2028 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (4,125 vpd) for 2029 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (4,221 vpd) for 2030 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (4,318 vpd) for 2031 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (4,415 vpd) for 2032 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (4,512 vpd) for 2033 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST

Start Location (Sta. ft)	End Location (Sta. ft)	Message
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (4,609 vpd) for 2034 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (4,705 vpd) for 2035 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (4,802 vpd) for 2036 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (4,899 vpd) for 2037 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (4,996 vpd) for 2038 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (5,093 vpd) for 2039 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (5,190 vpd) for 2040 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (5,308 vpd) for 2041 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (5,427 vpd) for 2042 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (5,545 vpd) for 2043 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (5,664 vpd) for 2044 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (5,782 vpd) for 2045 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (5,901 vpd) for 2046 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (6,019 vpd) for 2047 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (6,138 vpd) for 2048 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (6,256 vpd) for 2049 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (6,375 vpd) for 2050 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST

## **Crash Prediction Evaluation Report**

June 1, 2024

## **Disclaimer**

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

## **Limited Warranty and Limitations of Remedies**

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

## **Notice**

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

## Report Overview

**Report Generated:** Jun 1, 2024 2:26 PM

**Report Template:** System: Single Page, 508 Compliant [System] (mlcpm5, Dec 5, 2019 2:16 PM)

**Evaluation Date:** Sat Jun 01 14:21:35 CDT 2024

**IHSDM Version:** v17.0.0 (Sep 22, 2021)

**Crash Prediction Module:** v12.0.0 (Sep 22, 2021)

**User Name:** naveen.mallipaddi

**Organization Name:**

**Phone:**

**E-Mail:**

**Project Title:** SD-38\_Build\_Option1\_I90EBRamp\_I

**Project Comment:** Created Mon Mar 27 16:47:43 CDT 2023

**Project Unit System:** U.S. Customary

**Highway Title:** SD-38

**Highway Comment:** Created Mon Mar 27 16:49:47 CDT 2023

**Highway Version:** 22

**Evaluation Title:** Evaluation 55

**Evaluation Comment:** Created Sat Jun 01 14:16:24 CDT 2024

**Minimum Location:** 585+00.000

**Maximum Location:** 974+11.000

**Policy for Superelevation:** AASHTO 2011 U.S. Customary

**Calibration:** HSM Configuration

**Crash Distribution:** HSM Configuration

**Model/CMF:** HSM Configuration

**First Year of Analysis:** 2025

**Last Year of Analysis:** 2050

**Empirical-Bayes Analysis:** Site-Specific

**Highway with Crash History:** SD-38

**Highway with Crash History Comment:** Created Mon Mar 27 16:49:47 CDT 2023

**Highway with Crash History Version:** 22

**First Year of Observed Crashes:** 2018

**Last Year of Observed Crashes:** 2022

## Disclaimer Regarding Crash Prediction Method

### IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results. *[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

## **Section Types**

### **Section 4 Evaluation**

**Section:** Section 4

**Evaluation Start Location:** 676+00.000

**Evaluation End Location:** 862+60.000

**Area Type:** Rural

**Functional Class:** Arterial

**Type of Alignment:** Undivided, Two Lane

**Model Category:** Rural, Two Lane

**Calibration Factor:** 2U=1.0; 3ST=1.0; 4ST=1.0; RT\_ST\_FI=1.0; RT\_ST\_PDO=1.0;

Figure 1. Crash Prediction Summary (Section 4)

**Table 1. Observed Crashes Used in the Evaluation (Section 4)**

Year	Observed Crashes	Total Crashes Used	FI Crashes	FI no/C Crashes	PDO Crashes
2018	6	6	5	5	1
2019	7	7	3	0	4
2020	3	3	1	0	2
2021	4	4	2	1	2
2022	7	7	4	0	3
All Years	27 &nbsp; <sup>[1]</sup>	27	15	6	12

**Footnotes**

<sup>[1]</sup> Note: Observed crash data that does not comply with the associated CPM model requirements may not be used in EB processing.

Table 2. Evaluation Highway - Homogeneous Segments (Section 4)

Seg No.	Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AAADT	Left Lane Width (ft)	Right Lane Width (ft)	Left Shoulder Width (ft)	Right Shoulder Width (ft)	Grade (%)	Driveway Density (driveways/mi)	Hazard Rating	Centerline Rumble Strip	Passing Lanes	TW LT Lane	Lighting	Automated Speed Enforcement	Radius (ft)	Superelevation (%)	Adverse	Design Speed (mph)

## Section 3 Evaluation

**Section:** Section 3

**Evaluation Start Location:** 585+00.000

**Evaluation End Location:** 676+00.000

**Area Type:** Rural

**Functional Class:** Arterial

**Type of Alignment:** Undivided, Multilane

**Model Category:** Rural, Multilane

**Calibration Factor:** 4ST=1.0; 4U=1.0;

Figure 2. Crash Prediction Summary (Section 3)

**Table 22. Observed Crashes Used in the Evaluation (Section 3)**

Year	Observed Crashes	Total Crashes Used	FI Crashes	FI no/C Crashes	PDO Crashes
2018	1	1	1	0	0
2019	3	3	1	0	2
2020	3	2	0	0	2
2021	3	3	2	0	1
2022	1	1	0	0	1
All Years	11 &nbsp; <sup>[1]</sup>	10	4	0	6

	Total Crashes	132.45	52.3	82.70	32.7	120.78	47.7	253.17	100.0

**Note:** *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

**Table 35. Evaluation Message**

Start Location (Sta. ft)	End Location (Sta. ft)	Message
585+00.000	594+84.940	Warning: for segment #1 (585+00.000 to 594+84.940 ), no foreslope data available for left side of road for use by AFM3ru, using 1.0
585+00.000	594+84.940	Warning: for segment #1 (585+00.000 to 594+84.940 ), no foreslope data available for right side of road for use by AFM3ru, using 1.0
594+84.940	600+00.000	Warning: for segment #2 (594+84.940 to 600+00.000 ), no foreslope data available for left side of road for use by AFM3ru, using 1.0
594+84.940	600+00.000	Warning: for segment #2 (594+84.940 to 600+00.000 ), no foreslope data available for right side of road for use by AFM3ru, using 1.0
600+00.000	601+00.000	Warning: for segment #3 (600+00.000 to 601+00.000 ), no foreslope data available for left side of road for use by AFM3ru, using 1.0
600+00.000	601+00.000	Warning: for segment #3 (600+00.000 to 601+00.000 ), no foreslope data available for right side of road for use by AFM3ru, using 1.0
601+00.000	602+00.000	Warning: for segment #4 (601+00.000 to 602+00.000 ), no foreslope data available for left side of road for use by AFM3ru, using 1.0
601+00.000	602+00.000	Warning: for segment #4 (601+00.000 to 602+00.000 ), no foreslope data available for right side of road for use by AFM3ru, using 1.0
602+00.000	605+00.000	Warning: for segment #5 (602+00.000 to 605+00.000 ), no foreslope data available for left side of road for use by AFM3ru, using 1.0
602+00.000	605+00.000	Warning: for segment #5 (602+00.000 to 605+00.000 ), no foreslope data available for right side of road for use by AFM3ru, using 1.0
605+00.000	605+60.000	Warning: for segment #6 (605+00.000 to 605+60.000 ), no foreslope data available for left side of road for use by AFM3ru, using 1.0
605+00.000	605+60.000	Warning: for segment #6 (605+00.000 to 605+60.000 ), no foreslope data available for right side of road for use by AFM3ru, using 1.0
605+60.000	605+70.000	Warning: for segment #7 (605+60.000 to 605+70.000 ), no foreslope data available for left side of road for use by AFM3ru, using 1.0
605+60.000	605+70.000	Warning: for segment #7 (605+60.000 to 605+70.000 ), no foreslope data available for right side of road for use by AFM3ru, using 1.0
605+70.000	605+75.000	Warning: for segment #8 (605+70.000 to 605+75.000 ), no foreslope data available for left side of road for use by AFM3ru, using 1.0
605+70.000	605+75.000	Warning: for segment #8 (605+70.000 to 605+75.000 ), no foreslope data available for right side of road for use by AFM3ru, using 1.0
605+75.000	609+00.000	Warning: for segment #9 (605+75.000 to 609+00.000 ), no foreslope data available for left side of road for use by AFM3ru, using 1.0
605+75.000	609+00.000	Warning: for segment #9 (605+75.000 to 609+00.000 ), no foreslope data available for right side of road for use by AFM3ru, using 1.0
609+00.000	609+21.930	Warning: for segment #10 (609+00.000 to 609+21.930 ), no foreslope data available for left side of road for use by AFM3ru, using 1.0
609+00.000	609+21.930	Warning: for segment #10 (609+00.000 to 609+21.930 ), no foreslope data available for right side of road for use by AFM3ru, using 1.0
609+21.930	611+40.000	Warning: for segment #11 (609+21.930 to 611+40.000 ), no foreslope data available for left side of road for use by AFM3ru, using 1.0
609+21.930	611+40.000	Warning: for segment #11 (609+21.930 to 611+40.000 ), no foreslope data available for right side of road for use by AFM3ru, using 1.0
611+40.000	612+50.000	Warning: for segment #12 (611+40.000 to 612+50.000 ), no foreslope data available for left side of road for use by AFM3ru, using 1.0
611+40.000	612+50.000	Warning: for segment #12 (611+40.000 to 612+50.000 ), no foreslope data available for right side of road for use by AFM3ru, using 1.0
612+50.000	624+64.530	Warning: for segment #13 (612+50.000 to 624+64.530 ), no foreslope data available for left side of road for use by AFM3ru, using 1.0
612+50.000	624+64.530	Warning: for segment #13 (612+50.000 to 624+64.530 ), no foreslope data available for right side of road for use by AFM3ru, using 1.0
624+64.530	636+92.820	Warning: for segment #14 (624+64.530 to 636+92.820 ), no foreslope data available for left side of road for use by AFM3ru, using 1.0
624+64.530	636+92.820	Warning: for segment #14 (624+64.530 to 636+92.820 ), no foreslope data available for right side of road for use by AFM3ru, using 1.0
636+92.820	639+00.000	Warning: for segment #15 (636+92.820 to 639+00.000 ), no foreslope data available for left side of road for use by AFM3ru, using 1.0
636+92.820	639+00.000	Warning: for segment #15 (636+92.820 to 639+00.000 ), no foreslope data available for right side of road for use by AFM3ru, using 1.0

## Section 5 Evaluation

**Section:** Section 5

**Evaluation Start Location:** 862+60.000

**Evaluation End Location:** 948+50.000

**Area Type:** Rural

**Functional Class:** Arterial

**Type of Alignment:** Undivided, Multilane

**Model Category:** Rural, Multilane

**Calibration Factor:** 4ST=1.0; 4U=1.0;

**Figure 3. Crash Prediction Summary (Section 5)**

**Table 36. Observed Crashes Used in the Evaluation (Section 5)**

Year	Observed Crashes	Total Crashes Used	FI Crashes	FI no/C Crashes	PDO Crashes
2018	1	1	0	0	1
2019	0	0	0	0	0
2020	3	3	2	2	1
2021	2	2	1	1	1
2022	1	1	1	1	0
All Years	7 &nbsp; <sup>[1]</sup>	7	4	4	3

**Footnotes**

<sup>[1]</sup> Note: Observed crash data that does not comply with the associated CPM model requirements may not be used in EB processing.

**Table 42. Expected Highway Crash Rates and Frequencies Summary (Section 5)**

First Year of Analysis	2025
Last Year of Analysis	2050
Evaluated Length (mi)	1.6269
Average Future Road AADT (vpd)	9,671
<b>Expected Crashes</b>	
Total Crashes	128.33
Fatal and Injury Crashes	70.35
Fatal and Serious Injury Crashes	43.02
Property-Damage-Only Crashes	57.98
<b>Percent of Total Expected Crashes</b>	
Percent Fatal and Injury Crashes (%)	55
Percent Fatal and Serious Injury Crashes (%)	34
Percent Property-Damage-Only Crashes (%)	45
<b>Expected Crash Rate</b>	
Crash Rate (crashes/mi/yr)	3.0339
FI Crash Rate (crashes/mi/yr)	1.6632
FI no/C Crash Rate (crashes/mi/yr)	1.0171
PDO Crash Rate (crashes/mi/yr)	1.3707
<b>Expected Travel Crash Rate</b>	
Total Travel (million veh-mi)	149.31
Travel Crash Rate (crashes/million veh-mi)	0.86
Travel FI Crash Rate (crashes/million veh-mi)	0.47
Travel FI no/C Crash Rate (crashes/million veh-mi)	0.29
Travel PDO Crash Rate (crashes/million veh-mi)	0.39

## **Section 6 Evaluation**

**Section:** Section 6

**Evaluation Start Location:** 948+50.000

**Evaluation End Location:** 974+11.000

**Area Type:** Urban

**Functional Class:** Arterial

**Type of Alignment:** Undivided, Multilane

**Model Category:** Urban/Suburban Arterial

**Calibration Factor:** 4D=1.0; 4SG=1.0; 4U=1.0;

Figure 4. Crash Prediction Summary (Section 6)

**Table 50. Observed Crashes Used in the Evaluation (Section 6)**

Year	Observed Crashes	Total Crashes Used	FI Crashes	FI no/C Crashes	PDO Crashes
2018	5	5	4	0	1
2019	1	1	0	0	1
2020	2	2	0	0	2
2021	2	2	2	0	0
2022	2	2	0	0	2
All Years	12 &nbsp; <sup>[1]</sup>	12	6	0	6

**Footnotes**

<sup>[1]</sup> Note: Observed crash data that does not comply with the associated CPM model requirements may not be used in EB processing.

**Table 55. Expected Highway Crash Rates and Frequencies Summary (Section 6)**

First Year of Analysis	2025
Last Year of Analysis	2050
Evaluated Length (mi)	0.4850
Average Future Road AADT (vpd)	8,272
<b>Expected Crashes</b>	
Total Crashes	135.85
Fatal and Injury Crashes	46.51
Property-Damage-Only Crashes	89.34
<b>Percent of Total Expected Crashes</b>	
Percent Fatal and Injury Crashes (%)	34
Percent Property-Damage-Only Crashes (%)	66
<b>Expected Crash Rate</b>	
Crash Rate (crashes/mi/yr)	10.7725
FI Crash Rate (crashes/mi/yr)	3.6878
PDO Crash Rate (crashes/mi/yr)	7.0847
<b>Expected Travel Crash Rate</b>	
Total Travel (million veh-mi)	38.08
Travel Crash Rate (crashes/million veh-mi)	3.57
Travel FI Crash Rate (crashes/million veh-mi)	1.22
Travel PDO Crash Rate (crashes/million veh-mi)	2.35

## Report Overview

**Report Generated:** Jun 10, 2024 9:10 AM

**Report Template:** System: Single Page, 508 Compliant [System] (mlcpm5, Dec 5, 2019 2:16 PM)

**Evaluation Date:** Mon Jun 10 09:08:16 CDT 2024

**IHSDM Version:** v17.0.0 (Sep 22, 2021)

**Crash Prediction Module:** v12.0.0 (Sep 22, 2021)

**User Name:** naveen.mallipaddi

**Organization Name:**

**Phone:**

**E-Mail:**

**Project Title:** SD-38\_Build\_Option2\_I90EBRamp\_I

**Project Comment:** Created Mon Mar 27 16:47:43 CDT 2023

**Project Unit System:** U.S. Customary

**Highway Title:** SD-38

**Highway Comment:** Created Mon Mar 27 16:49:47 CDT 2023

**Highway Version:** 20

**Evaluation Title:** Evaluation 53

**Evaluation Comment:** Created Mon Jun 10 09:07:26 CDT 2024

**Minimum Location:** 171+44.000

**Maximum Location:** 580+10.000

**Policy for Superelevation:** AASHTO 2011 U.S. Customary

**Calibration:** HSM Configuration

**Crash Distribution:** HSM Configuration

**Model/CMF:** HSM Configuration

**First Year of Analysis:** 2025

**Last Year of Analysis:** 2050

**Empirical-Bayes Analysis:** Site-Specific

**Highway with Crash History:** SD-38

**Highway with Crash History Comment:** Created Mon Mar 27 16:49:47 CDT 2023

**Highway with Crash History Version:** 20

**First Year of Observed Crashes:** 2018

**Last Year of Observed Crashes:** 2022

## Disclaimer Regarding Crash Prediction Method

### IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results. *[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

## **Section Types**

### **Section 1 Evaluation**

**Section:** Section 1

**Evaluation Start Location:** 171+44.000

**Evaluation End Location:** 580+10.000

**Area Type:** Rural

**Functional Class:** Arterial

**Type of Alignment:** Undivided, Two Lane

**Model Category:** Rural, Two Lane

**Calibration Factor:** 2U=1.0; 3ST=1.0; 4ST=1.0;

Figure 1. Crash Prediction Summary (Section 1)

**Table 1. Observed Crashes Used in the Evaluation (Section 1)**

Year	Observed Crashes	Total Crashes Used	FI Crashes	FI no/C Crashes	PDO Crashes
2018	9	9	2	1	7
2019	5	4	1	0	3
2020	9	9	5	1	4
2021	8	7	3	1	4
2022	6	6	3	1	3
All Years	37 &nbsp; <sup>[1]</sup>	35	14	4	21

**Footnotes**

<sup>[1]</sup> Note: Observed crash data that does not comply with the associated CPM model requirements may not be used in EB processing.

**Table 6. Expected Highway Crash Rates and Frequencies Summary (Section 1)**

First Year of Analysis	2025
Last Year of Analysis	2050
Evaluated Length (mi)	7.7398
Average Future Road AADT (vpd)	4,284
<b>Expected Crashes</b>	
Total Crashes	476.74
Fatal and Injury Crashes	193.60
Property-Damage-Only Crashes	283.14
<b>Percent of Total Expected Crashes</b>	
Percent Fatal and Injury Crashes (%)	41
Percent Property-Damage-Only Crashes (%)	59
<b>Expected Crash Rate</b>	
Crash Rate (crashes/mi/yr)	2.3691
FI Crash Rate (crashes/mi/yr)	0.9621
PDO Crash Rate (crashes/mi/yr)	1.4070
<b>Expected Travel Crash Rate</b>	
Total Travel (million veh-mi)	314.63
Travel Crash Rate (crashes/million veh-mi)	1.51
Travel FI Crash Rate (crashes/million veh-mi)	0.61
Travel PDO Crash Rate (crashes/million veh-mi)	0.90

Expected	476.74	193.60	40.610	283.14	59.390
Expected - Predicted	-385.35	-151.28		-234.07	
Percent Difference	-80.83	-78.14		-82.67	

**Note:** *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

**Table 12. Expected Crash Type Distribution (Section 1)**

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Collision with Animal	2.97	0.6	24.90	5.2	25.84	5.4
Highway Segment	Collision with Bicycle	0.31	0.1	0.14	0.0	0.43	0.1
Highway Segment	Other Single-vehicle Collision	0.55	0.1	3.92	0.8	4.49	0.9
Highway Segment	Overtaken	2.90	0.6	2.03	0.4	5.34	1.1
Highway Segment	Collision with Pedestrian	0.55	0.1	0.14	0.0	0.64	0.1
Highway Segment	Run Off Road	42.66	9.0	68.34	14.3	111.28	23.4
Highway Segment	Total Single Vehicle Crashes	49.94	10.5	99.46	20.9	148.02	31.1
Highway Segment	Angle Collision	7.91	1.7	9.74	2.0	18.16	3.8
Highway Segment	Head-on Collision	2.66	0.6	0.41	0.1	3.42	0.7
Highway Segment	Other Multiple-vehicle Collision	2.04	0.4	4.06	0.9	5.77	1.2
Highway Segment	Rear-end Collision	12.91	2.7	16.51	3.5	30.33	6.4
Highway Segment	Sideswipe	2.97	0.6	5.14	1.1	7.90	1.7
Highway Segment	Total Multiple Vehicle Crashes	28.49	6.0	35.86	7.5	65.57	13.8
Highway Segment	Total Highway Segment Crashes	78.43	16.5	135.32	28.4	213.60	44.8
Intersection	Collision with Animal	0.71	0.1	2.22	0.5	2.84	0.6
Intersection	Collision with Bicycle	0.12	0.0	0.15	0.0	0.26	0.1
Intersection	Other Single-vehicle Collision	0.54	0.1	1.61	0.3	2.10	0.4
Intersection	Overtaken	0.86	0.2	0.63	0.1	1.50	0.3
Intersection	Collision with Pedestrian	0.12	0.0	0.15	0.0	0.26	0.1
Intersection	Run Off Road	12.42	2.6	22.60	4.7	34.98	7.3
Intersection	Total Single Vehicle Crashes	14.77	3.1	27.36	5.7	41.97	8.8
Intersection	Angle Collision	58.58	12.3	50.48	10.6	108.83	22.8
Intersection	Head-on Collision	7.15	1.5	3.79	0.8	10.81	2.3
Intersection	Other Multiple-vehicle Collision	4.93	1.0	5.42	1.1	10.33	2.2
Intersection	Rear-end Collision	24.76	5.2	39.65	8.3	64.53	13.5
Intersection	Sideswipe	5.15	1.1	21.12	4.4	26.48	5.6
Intersection	Total Multiple Vehicle Crashes	100.56	21.1	120.46	25.3	220.99	46.4
Intersection	Total Intersection Crashes	115.33	24.2	147.81	31.0	262.95	55.2
	Total Crashes	193.76	40.7	283.14	59.4	476.55	100.0

**Note:** *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

**Table 13. Evaluation Message**

Start Location (Sta. ft)	End Location (Sta. ft)	Message
580+00.000	580+00.000	Warning: for intersection #3 (580+00.000 to 580+00.000 ), SE SD-38 at 580+00.000 has more than one lane exiting. No intersection crash prediction computed.
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (3,560 vpd) for 2018 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (3,560 vpd) for 2019 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST

## **Crash Prediction Evaluation Report**

June 10, 2024

## **Disclaimer**

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

## **Limited Warranty and Limitations of Remedies**

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

## **Notice**

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

**Last Year of Observed Crashes:** 2022

## Disclaimer Regarding Crash Prediction Method

### IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results. *[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

## **Section Types**

### **Section 3 Evaluation**

**Section:** Section 3

**Evaluation Start Location:** 585+00.000

**Evaluation End Location:** 948+50.000

**Area Type:** Rural

**Functional Class:** Arterial

**Type of Alignment:** Undivided/Divided Multilane

**Model Category:** Rural, Multilane

**Calibration Factor:** 3ST=1.0; 4D=1.0; 4ST=1.0; 4U=1.0; RT\_ST\_FI=1.0; RT\_ST\_PDO=1.0;

Figure 1. Crash Prediction Summary (Section 3)

**Table 1. Observed Crashes Used in the Evaluation (Section 3)**

Year	Observed Crashes	Total Crashes Used	FI Crashes	FI no/C Crashes	PDO Crashes
2018	8	8	6	5	2
2019	10	10	4	0	6
2020	7	7	3	2	4
2021	9	9	5	2	4
2022	9	9	5	1	4
All Years	43 &nbsp; <sup>[1]</sup>	43	23	10	20

**Footnotes**

<sup>[1]</sup> Note: Observed crash data that does not comply with the associated CPM model requirements may not be used in EB processing.

809+00.000	809+60.000	Warning: for segment #70 (809+00.000 to 809+60.000 ), no foreslope data available for left side of road for use by AFM3ru, using 1.0
809+00.000	809+60.000	Warning: for segment #70 (809+00.000 to 809+60.000 ), no foreslope data available for right side of road for use by AFM3ru, using 1.0
861+85.000	862+00.000	Warning: for segment #82 (861+85.000 to 862+00.000 ), no foreslope data available for left side of road for use by AFM3ru, using 1.0
861+85.000	862+00.000	Warning: for segment #82 (861+85.000 to 862+00.000 ), no foreslope data available for right side of road for use by AFM3ru, using 1.0
862+00.000	862+50.000	Warning: for segment #83 (862+00.000 to 862+50.000 ), no foreslope data available for left side of road for use by AFM3ru, using 1.0
862+00.000	862+50.000	Warning: for segment #83 (862+00.000 to 862+50.000 ), no foreslope data available for right side of road for use by AFM3ru, using 1.0
862+50.000	862+60.000	Warning: for segment #84 (862+50.000 to 862+60.000 ), no foreslope data available for left side of road for use by AFM3ru, using 1.0
862+50.000	862+60.000	Warning: for segment #84 (862+50.000 to 862+60.000 ), no foreslope data available for right side of road for use by AFM3ru, using 1.0
888+20.000	889+30.000	Warning: for segment #94 (888+20.000 to 889+30.000 ), no foreslope data available for left side of road for use by AFM3ru, using 1.0
888+20.000	889+30.000	Warning: for segment #94 (888+20.000 to 889+30.000 ), no foreslope data available for right side of road for use by AFM3ru, using 1.0
914+30.000	914+40.000	Warning: for segment #107 (914+30.000 to 914+40.000 ), no foreslope data available for left side of road for use by AFM3ru, using 1.0
914+30.000	914+40.000	Warning: for segment #107 (914+30.000 to 914+40.000 ), no foreslope data available for right side of road for use by AFM3ru, using 1.0
914+40.000	915+40.000	Warning: for segment #108 (914+40.000 to 915+40.000 ), no foreslope data available for left side of road for use by AFM3ru, using 1.0
914+40.000	915+40.000	Warning: for segment #108 (914+40.000 to 915+40.000 ), no foreslope data available for right side of road for use by AFM3ru, using 1.0

## Section 4 Evaluation

**Section:** Section 4

**Evaluation Start Location:** 948+50.000

**Evaluation End Location:** 974+11.000

**Area Type:** Urban

**Functional Class:** Arterial

**Type of Alignment:** Undivided, Multilane

**Model Category:** Urban/Suburban Arterial

**Calibration Factor:** 4D=1.0; 4SG=1.0; 4U=1.0;

**Figure 2. Crash Prediction Summary (Section 4)**

**Table 20. Observed Crashes Used in the Evaluation (Section 4)**

Year	Observed Crashes	Total Crashes Used	FI Crashes	FI no/C Crashes	PDO Crashes
2018	5	5	4	0	1
2019	1	1	0	0	1
2020	2	2	0	0	2
2021	2	2	2	0	0
2022	2	2	0	0	2
All Years	12 &nbsp; <sup>[1]</sup>	12	6	0	6

**Footnotes**

<sup>[1]</sup> Note: Observed crash data that does not comply with the associated CPM model requirements may not be used in EB processing.

## Report Overview

**Report Generated:** Jun 10, 2024 10:00 AM

**Report Template:** System: Single Page, 508 Compliant [System] (mlcpm5, Dec 5, 2019 2:16 PM)

**Evaluation Date:** Mon Jun 10 10:00:02 CDT 2024

**IHSDM Version:** v17.0.0 (Sep 22, 2021)

**Crash Prediction Module:** v12.0.0 (Sep 22, 2021)

**User Name:** naveen.mallipaddi

**Organization Name:**

**Phone:**

**E-Mail:**

**Project Title:** SD-38\_Build\_Option3\_I90EBRamp\_I

**Project Comment:** Created Mon Mar 27 16:47:43 CDT 2023

**Project Unit System:** U.S. Customary

**Highway Title:** SD-38

**Highway Comment:** Created Mon Mar 27 16:49:47 CDT 2023

**Highway Version:** 17

**Evaluation Title:** Option3\_SD19\_4644th

**Evaluation Comment:** Created Mon Jun 10 09:58:59 CDT 2024

**Minimum Location:** 171+44.000

**Maximum Location:** 580+10.000

**Policy for Superelevation:** AASHTO 2011 U.S. Customary

**Calibration:** HSM Configuration

**Crash Distribution:** HSM Configuration

**Model/CMF:** HSM Configuration

**First Year of Analysis:** 2025

**Last Year of Analysis:** 2050

**Empirical-Bayes Analysis:** Site-Specific

**Highway with Crash History:** SD-38

**Highway with Crash History Comment:** Created Mon Mar 27 16:49:47 CDT 2023

**Highway with Crash History Version:** 17

**First Year of Observed Crashes:** 2018

**Last Year of Observed Crashes:** 2022

## Disclaimer Regarding Crash Prediction Method

### IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results. *[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

## **Section Types**

### **Section 1 Evaluation**

**Section:** Section 1

**Evaluation Start Location:** 171+44.000

**Evaluation End Location:** 580+10.000

**Area Type:** Rural

**Functional Class:** Arterial

**Type of Alignment:** Undivided, Two Lane

**Model Category:** Rural, Two Lane

**Calibration Factor:** 2U=1.0; 3ST=1.0; 4ST=1.0;

Figure 1. Crash Prediction Summary (Section 1)

**Table 1. Observed Crashes Used in the Evaluation (Section 1)**

Year	Observed Crashes	Total Crashes Used	FI Crashes	FI no/C Crashes	PDO Crashes
2018	9	9	2	1	7
2019	5	4	1	0	3
2020	9	9	5	1	4
2021	8	7	3	1	4
2022	6	6	3	1	3
All Years	37 &nbsp; <sup>[1]</sup>	35	14	4	21

**Footnotes**

<sup>[1]</sup> Note: Observed crash data that does not comply with the associated CPM model requirements may not be used in EB processing.

**Table 6. Expected Highway Crash Rates and Frequencies Summary (Section 1)**

First Year of Analysis	2025
Last Year of Analysis	2050
Evaluated Length (mi)	7.7398
Average Future Road AADT (vpd)	4,284
<b>Expected Crashes</b>	
Total Crashes	476.74
Fatal and Injury Crashes	193.60
Property-Damage-Only Crashes	283.14
<b>Percent of Total Expected Crashes</b>	
Percent Fatal and Injury Crashes (%)	41
Percent Property-Damage-Only Crashes (%)	59
<b>Expected Crash Rate</b>	
Crash Rate (crashes/mi/yr)	2.3691
FI Crash Rate (crashes/mi/yr)	0.9621
PDO Crash Rate (crashes/mi/yr)	1.4070
<b>Expected Travel Crash Rate</b>	
Total Travel (million veh-mi)	314.63
Travel Crash Rate (crashes/million veh-mi)	1.51
Travel FI Crash Rate (crashes/million veh-mi)	0.61
Travel PDO Crash Rate (crashes/million veh-mi)	0.90

Table 7. Expected Crash Frequencies and Rates by Highway Segment/Intersection (Section 1)

Segment Number/Intersection Name/Cross Road	Start Location (Sta. ft)	End Location (Sta. ft)	Length (mi)	Total Expected Crashes for Evaluation Period	Total Predicted Crashes for Evaluation Period	Expected Total Crash Frequency (crashes/yr)	Expected FI Crash Frequency (crashes/yr)	Expected PDO Crash Frequency (crashes/yr)	Predicted Total Crash Frequency (crashes/yr)	Predicted FI Crash Frequency (crashes/yr)	Predicted PDO Crash Frequency (crashes/yr)	(Expected - Predicted) Total Crash Frequency (crashes/yr)	(Expected - Predicted) FI Crash Frequency (crashes/yr)	(Expected - Predicted) PDO Crash Frequency (crashes/yr)	Expected Crash Rate (crashes/mi/yr)	Expected Travel Crash Rate (crashes/mi/1000 veh)	Expected Intersection Travel Crash Rate (crashes/million veh)

2045	21.39	8.70	40.664	12.69	59.338
2046	21.82	8.88	40.671	12.95	59.330
2047	22.26	9.05	40.678	13.20	59.323
2048	22.69	9.23	40.686	13.46	59.316
2049	23.13	9.41	40.693	13.72	59.309
2050	23.56	9.59	40.700	13.97	59.302
Total	476.74	193.60	40.610	283.14	59.390
Average	18.34	7.45	40.610	10.89	59.390

**Note:** *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

**Table 11. Comparing Predicted and Expected Crashes for the Evaluation Period (Section 1)**

Scope	Total Crashes	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)
Predicted	862.09	344.88	40.005	517.21	59.995
Expected	476.74	193.60	40.610	283.14	59.390
Expected - Predicted	-385.35	-151.28		-234.07	
Percent Difference	-80.83	-78.14		-82.67	

**Note:** *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

**Table 12. Expected Crash Type Distribution (Section 1)**

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Collision with Animal	2.97	0.6	24.90	5.2	25.84	5.4
Highway Segment	Collision with Bicycle	0.31	0.1	0.14	0.0	0.43	0.1
Highway Segment	Other Single-vehicle Collision	0.55	0.1	3.92	0.8	4.49	0.9
Highway Segment	Overtaken	2.90	0.6	2.03	0.4	5.34	1.1
Highway Segment	Collision with Pedestrian	0.55	0.1	0.14	0.0	0.64	0.1
Highway Segment	Run Off Road	42.66	9.0	68.34	14.3	111.28	23.4
Highway Segment	Total Single Vehicle Crashes	49.94	10.5	99.46	20.9	148.02	31.1
Highway Segment	Angle Collision	7.91	1.7	9.74	2.0	18.16	3.8
Highway Segment	Head-on Collision	2.66	0.6	0.41	0.1	3.42	0.7
Highway Segment	Other Multiple-vehicle Collision	2.04	0.4	4.06	0.9	5.77	1.2
Highway Segment	Rear-end Collision	12.91	2.7	16.51	3.5	30.33	6.4
Highway Segment	Sideswipe	2.97	0.6	5.14	1.1	7.90	1.7
Highway Segment	Total Multiple Vehicle Crashes	28.49	6.0	35.86	7.5	65.57	13.8
Highway Segment	Total Highway Segment Crashes	78.43	16.5	135.32	28.4	213.60	44.8
Intersection	Collision with Animal	0.71	0.1	2.22	0.5	2.84	0.6
Intersection	Collision with Bicycle	0.12	0.0	0.15	0.0	0.26	0.1
Intersection	Other Single-vehicle Collision	0.54	0.1	1.61	0.3	2.10	0.4
Intersection	Overtaken	0.86	0.2	0.63	0.1	1.50	0.3
Intersection	Collision with Pedestrian	0.12	0.0	0.15	0.0	0.26	0.1
Intersection	Run Off Road	12.42	2.6	22.60	4.7	34.98	7.3
Intersection	Total Single Vehicle Crashes	14.77	3.1	27.36	5.7	41.97	8.8
Intersection	Angle Collision	58.58	12.3	50.48	10.6	108.83	22.8
Intersection	Head-on Collision	7.15	1.5	3.79	0.8	10.81	2.3
Intersection	Other Multiple-vehicle Collision	4.93	1.0	5.42	1.1	10.33	2.2
Intersection	Rear-end Collision	24.76	5.2	39.65	8.3	64.53	13.5
Intersection	Sideswipe	5.15	1.1	21.12	4.4	26.48	5.6
Intersection	Total Multiple Vehicle Crashes	100.56	21.1	120.46	25.3	220.99	46.4
Intersection	Total Intersection Crashes	115.33	24.2	147.81	31.0	262.95	55.2
	Total Crashes	193.76	40.7	283.14	59.4	476.55	100.0

**Note:** *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

**Table 13. Evaluation Message**

Start Location (Sta. ft)	End Location (Sta. ft)	Message
580+00.000	580+00.000	Warning: for intersection #3 (580+00.000 to 580+00.000 ), SE SD-38 at 580+00.000 has more than one lane exiting. No intersection crash prediction computed.
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (3,560 vpd) for 2018 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (3,560 vpd) for 2019 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (3,560 vpd) for 2020 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST
512+00.000	512+00.000	Warning: for intersection #7 (512+00.000 to 512+00.000 ), minor road traffic volume (3,560 vpd) for 2021 is not within the model limit (3,500 vpd) for reliable results for intersection type 4ST

## Report Overview

**Report Generated:** Jun 10, 2024 10:07 AM

**Report Template:** System: Single Page, 508 Compliant [System] (mlcpm5, Dec 5, 2019 2:16 PM)

**Evaluation Date:** Mon Jun 10 10:05:34 CDT 2024

**IHSDM Version:** v17.0.0 (Sep 22, 2021)

**Crash Prediction Module:** v12.0.0 (Sep 22, 2021)

**User Name:** naveen.mallipaddi

**Organization Name:**

**Phone:**

**E-Mail:**

**Project Title:** SD-38\_Build\_Option3\_I90EBRamp\_I

**Project Comment:** Created Mon Mar 27 16:47:43 CDT 2023

**Project Unit System:** U.S. Customary

**Highway Title:** SD-38

**Highway Comment:** Created Mon Mar 27 16:49:47 CDT 2023

**Highway Version:** 17

**Evaluation Title:** Evaluation 51

**Evaluation Comment:** Created Mon Jun 10 10:01:57 CDT 2024

**Minimum Location:** 585+00.000

**Maximum Location:** 974+11.000

**Policy for Superelevation:** AASHTO 2011 U.S. Customary

**Calibration:** HSM Configuration

**Crash Distribution:** HSM Configuration

**Model/CMF:** HSM Configuration

**First Year of Analysis:** 2025

**Last Year of Analysis:** 2050

**Empirical-Bayes Analysis:** Site-Specific

**Highway with Crash History:** SD-38

**Highway with Crash History Comment:** Created Mon Mar 27 16:49:47 CDT 2023

**Highway with Crash History Version:** 17

**First Year of Observed Crashes:** 2018

**Last Year of Observed Crashes:** 2022

## Disclaimer Regarding Crash Prediction Method

### IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results. *[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

## **Section Types**

### **Section 3 Evaluation**

**Section:** Section 3

**Evaluation Start Location:** 585+00.000

**Evaluation End Location:** 948+50.000

**Area Type:** Rural

**Functional Class:** Arterial

**Type of Alignment:** Undivided/Divided Multilane

**Model Category:** Rural, Multilane

**Calibration Factor:** 3ST=1.0; 4D=1.0; 4ST=1.0; 4U=1.0; RT\_ST\_FI=1.0; RT\_ST\_PDO=1.0;

Figure 1. Crash Prediction Summary (Section 3)

**Table 1. Observed Crashes Used in the Evaluation (Section 3)**

Year	Observed Crashes	Total Crashes Used	FI Crashes	FI no/C Crashes	PDO Crashes
2018	8	8	6	5	2
2019	10	10	4	0	6
2020	7	7	3	2	4
2021	9	9	5	2	4
2022	9	9	5	1	4
All Years	43 &nbsp; <sup>[1]</sup>	43	23	10	20

**Footnotes**

<sup>[1]</sup> Note: Observed crash data that does not comply with the associated CPM model requirements may not be used in EB processing.

**Table 10. Expected Highway Crash Rates and Frequencies Summary (Section 3)**

First Year of Analysis	2025
Last Year of Analysis	2050
Evaluated Length (mi)	6.8845
Average Future Road AADT (vpd)	10,372
<b>Expected Crashes</b>	
Total Crashes	611.54
Fatal and Injury Crashes	316.56
Fatal and Serious Injury Crashes	206.04
Property-Damage-Only Crashes	294.99
<b>Percent of Total Expected Crashes</b>	
Percent Fatal and Injury Crashes (%)	52
Percent Fatal and Serious Injury Crashes (%)	34
Percent Property-Damage-Only Crashes (%)	48
<b>Expected Crash Rate</b>	
Crash Rate (crashes/mi/yr)	3.4165
FI Crash Rate (crashes/mi/yr)	1.7685
FI no/C Crash Rate (crashes/mi/yr)	1.1511
PDO Crash Rate (crashes/mi/yr)	1.6480
<b>Expected Travel Crash Rate</b>	
Total Travel (million veh-mi)	677.62
Travel Crash Rate (crashes/million veh-mi)	0.90
Travel FI Crash Rate (crashes/million veh-mi)	0.47
Travel FI no/C Crash Rate (crashes/million veh-mi)	0.30
Travel PDO Crash Rate (crashes/million veh-mi)	0.43

Table 11. Expected Crash Frequencies and Rates by Highway Segment/Intersection (Section 3)

Segment Number/Intersection Name/Cross Road	Start Location (Sta. ft)	End Location (Sta. ft)	Length (mi)	Total Expected Crashes for Evaluation Period	Total Predicted Crashes for Evaluation Period	Expected Total Crash Frequency (crashes/yr)	Expected FI Crash Frequency (crashes/yr)	Expected FI no/C Crash Frequency (crashes/yr)	Expected PDO Crash Frequency (crashes/yr)	Predicted Total Crash Frequency (crashes/yr)	Predicted FI Crash Frequency (crashes/yr)	Predicted FI no/C Crash Frequency (crashes/yr)	Predicted PDO Crash Frequency (crashes/yr)	(Expected - Predicted) Total Crash Frequency (crashes/yr)	(Expected - Predicted) FI Crash Frequency (crashes/yr)	(Expected - Predicted) FI no/C Crash Frequency (crashes/yr)	(Expected - Predicted) PDO Crash Frequency (crashes/yr)	Expected Crash Rate (crashes/mi/yr)	Expected Travel Crash Rate (crashes/million veh-mi)	Expected Intersection Travel Crash Rate (crashes/million veh)

## Section 4 Evaluation

**Section:** Section 4

**Evaluation Start Location:** 948+50.000

**Evaluation End Location:** 974+11.000

**Area Type:** Urban

**Functional Class:** Arterial

**Type of Alignment:** Undivided, Multilane

**Model Category:** Urban/Suburban Arterial

**Calibration Factor:** 4D=1.0; 4SG=1.0; 4U=1.0;

Figure 2. Crash Prediction Summary (Section 4)

**Table 19. Observed Crashes Used in the Evaluation (Section 4)**

Year	Observed Crashes	Total Crashes Used	FI Crashes	FI no/C Crashes	PDO Crashes
2018	5	5	4	0	1
2019	1	1	0	0	1
2020	2	2	0	0	2
2021	2	2	2	0	0
2022	2	2	0	0	2
All Years	12 &nbsp; <sup>[1]</sup>	12	6	0	6

**Footnotes**

<sup>[1]</sup> Note: Observed crash data that does not comply with the associated CPM model requirements may not be used in EB processing.

Table 20. Evaluation Highway - Homogeneous Segments (Section 4)

Segment No.	Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT	Number Major Commercial Driveways	Number Minor Commercial Driveways	Number Major Industrial/Institutional	Number Minor Industrial/Institutional	Number Major Residential Driveways	Number Minor Residential Driveways	Number Other Driveways	Lighting	Automated Speed Enforcement	Density (fixed objects/mi)	Median Width (ft)	Type	Effective Median Width (ft)	Speed Level	Number Railway Crossings	Average Shoulder Width (ft)	Average Lane Width (ft)

**Table 24. Expected Highway Crash Rates and Frequencies Summary (Section 4)**

First Year of Analysis	2025
Last Year of Analysis	2050
Evaluated Length (mi)	0.4850
Average Future Road AADT (vpd)	8,272
<b>Expected Crashes</b>	
Total Crashes	135.85
Fatal and Injury Crashes	46.51
Property-Damage-Only Crashes	89.34
<b>Percent of Total Expected Crashes</b>	
Percent Fatal and Injury Crashes (%)	34
Percent Property-Damage-Only Crashes (%)	66
<b>Expected Crash Rate</b>	
Crash Rate (crashes/mi/yr)	10.7725
FI Crash Rate (crashes/mi/yr)	3.6878
PDO Crash Rate (crashes/mi/yr)	7.0847
<b>Expected Travel Crash Rate</b>	
Total Travel (million veh-mi)	38.08
Travel Crash Rate (crashes/million veh-mi)	3.57
Travel FI Crash Rate (crashes/million veh-mi)	1.22
Travel PDO Crash Rate (crashes/million veh-mi)	2.35

Intersection	Collision with Parked Vehicle	0.00	0.0	0.00	0.0	0.00	0.0
Intersection	Collision with Pedestrian	0.44	0.3	0.00	0.0	0.44	0.3
Intersection	Total Intersection Single Vehicle Crashes	2.38	1.7	1.97	1.4	4.34	3.2
Intersection	Angle Collision	12.98	9.6	17.77	13.1	30.75	22.6
Intersection	Head-on Collision	1.83	1.3	2.18	1.6	4.02	3.0
Intersection	Other Multi-vehicle Collision	2.06	1.5	15.36	11.3	17.42	12.8
Intersection	Rear-end Collision	16.84	12.4	35.17	25.9	52.01	38.3
Intersection	Sideswipe	3.70	2.7	2.33	1.7	6.03	4.4
Intersection	Total Intersection Multiple Vehicle Crashes	37.41	27.5	72.82	53.6	110.23	81.1
Intersection	Total Intersection Crashes	39.79	29.3	74.78	55.0	114.57	84.3
	Total Crashes	46.51	34.2	89.34	65.8	135.85	100.0

**Note:** *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.
