

Landscape Architecture - Private Sector

Concept Through Completion

At HR Green, we follow a multi-disciplinary, collaborative, process-oriented design philosophy. We consider the natural and historical characteristics of a site and focus on exceeding your goals and objectives through constructible designs.This philosophy defines our project approach from small commercial pad lots to comprehensive master planned communities, streetscapes, commercial centers, resorts, campuses and industrial complexes.

We understand landscape architecture services must be tailored for the intended uses and future needs of your project. In designing your project, our landscape architects will maintain balance between functional and programmatic requirements, operation and maintenance protocols, construction standards, performance, and innovation. **We believe design must be led by a comprehensive understanding of the anticipated lifespan of a project, accounting for sustainability, durability and ease of maintenance.**
Our landscape architects develop creative solutions to long-term and emergent risks and opportunities, incorporating innovative new proven technologies. Our proven track record demonstrates our capability to safely, efficiently, and punctually deliver complex undertakings while faithfully preserving the original design integrity from inception to completion.

> Our landscape architects advance a legacy of innovative design and engineering by harmonizing visual appeal, utility, budget, feasibility, and longevity to shape meaningful projects.

We are your partner in guiding projects to success through complete, comprehensive, and accurate design and contract documents that are clearly detailed and coordinated across disciplines to meet or exceed requirements of code, zoning, and accessibility.
Our specifications are carefully coordinated with drawings and material schedules and tailored to the requirements of each project. To ensure optimal project efficiency, all specified materials and assemblies must be field-proven, readily accessible through regional supply chains, and fully compatible with local construction methodologies. This approach mitigates lead-time vulnerabilities, protects the project budget against cost escalation, and maintains the critical path schedule.fully compatible with local construction methodologies. This approach mitigates lead-time vulnerabilities, protects the project budget against cost escalation, and maintains the critical path schedule.

Our comprehensive capabilities span the complete project lifecycle—including planning, design, construction, and close-out—guaranteeing the successful execution of exceptional projects on schedule and within financial parameters.

HRGreen®

Building Communities. Improving Lives.

Landscape Architectural Services

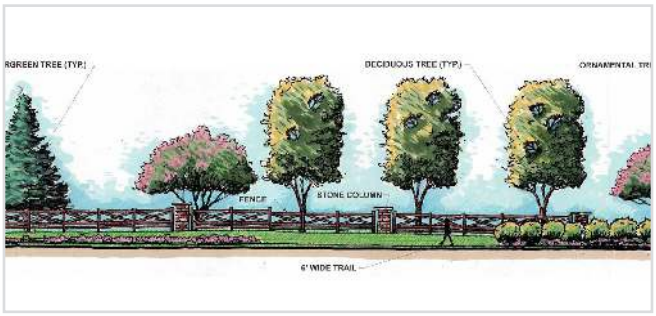

▶ Planting Design

Our licensed landscape architects utilize various plant materials to create, define, enhance, and control exterior spaces. We use our horticultural knowledge to select the right plants for the right condition.

▶ Visioning + Theming + Branding

We develop themes that define and create "sense of place" and communicates our client's vision. This practice differentiates our clients' projects from their competitors, through landscape architectural elements, architectural control, and site furnishings.

▶ Streetscapes + Parkways

Through the use of landform enhancement, landscaping, lighting, customized signage programs, and hardscape elements, we create unique streetscape environments to improve vehicular and pedestrian experiences.

▶ Signage + Monumentation + Wayfinding

We design and create strategic signage plans and wayfinding systems to guide pedestrians and vehicular traffic through communities, urban spaces, and green corridors. We create monuments that mark community or commercial gateways and convey unique design elements and character to the visitor.

▶ Environmental + Sustainable Design

Our teams are led by LEED Accredited Professionals who design solutions that reduce impacts on the environment, require less long-term maintenance, and produce positive environmental and economic results.
